

Workshop organised by the SDSN

Work on different elements of a monitoring framework for the post-2015 development agenda is conducted by different groups and in various fora. Most recently, the Sustainable Development Solution Network (SDSN) organised a workshop in cooperation with UNSD and with participation of FOC members from 23-24 June in New York, which discussed the issues of data gaps, annual reporting, survey instruments and effective architecture/needs assessment. The outcome of the meeting will be provided when it becomes available but please also check on the SDSN website (<http://unsdsn.org/>).
