**GENERAL NOTES - NOTES GENERALES**

Countries or areas not listed may be assumed to lack vital statistics of national scope. Crude birth, death and natural increase rates are computed per 1 000 mid-year population; infant mortality rates per 1 000 live births and total fertility rates are the sum of age-specific fertility rates per woman. For method of evaluation, and limitations of data, see Technical Notes for this table. For more precise information in terms of coverage, basis of tabulation, etc., see tables 9, 15, 18 and 22. — Les pays et zones ne figurant pas au tableau n'ont vraisemblablement pas de statistiques de l'état civil de portée nationale. Les taux bruts de natalité, de mortalité et d'accroissement naturel sont calculés pour 1 000 personnes au milieu de l'année; les taux de mortalité infantile sont calculés pour 1 000 naissances vivantes et les indices synthétiques de fécondité sont la somme des taux de fécondité par âge par femme. Pour la méthode d'évaluation et les insuffisances des données, voir Notes techniques, pour ces tableaux. Pour plus de détails sur la portée, la base d'exploitation des données, etc., voir tableaux 9, 15, 18 et 22.
