

Table 31**Utilization of installed electricity capacity - by type**

Kilowatt-hours per kilowatt divided by 8760

Table Notes

Data on utilization are derived by dividing the data on electricity production shown in Table 32 by the net installed capacity shown in Table 30, and then by the total number of hours in a year to yield a percentage of theoretical maximal utilization.

For this table, Other under total refers to geothermal, tide, wave, marine and other non-specified sources. Other under autoproducers refers to nuclear (if any), wind, solar, tide, wave, marine and other non-specified sources. Other under main activity producers refers to wind, solar, tide, wave, marine and other non-specified sources.

For Austria data are given in gross maximum capacity.

Please refer to the Definitions Section on pages ix to xv for the appropriate product description /classification.
