

**Invitation to seminar in the margins of the 45th session of the
United Nations Statistical Commission**

Towards the post 2015 development agenda

Technical capacity building in statistics – lessons learned from 30 years of global work: what next?

Organized by Statistics Sweden and Statistics Norway

Wednesday 5 March, 6:15 - 8:00 pm
Venue: Conf. Room 7 (TNLB)

When the world's political leaders agree upon and adopt new sustainable development goals in 2015, large investments in data collection, production, development and communication of statistics will be needed.

For more than 30 years the Statistical Institutes of both Norway and Sweden have been engaged in long term statistical capacity building with partners in different countries around the world. At this seminar we would like to share our experiences and ideas for the future with you. The seminar will be further enriched by presentations and reflections from Mozambique and from Paris 21. We are looking forward to an interaction with participants to find ways forward in addressing needs and concrete action for statistical capacity building in the wake of new sustainable development goals in 2015.

Agenda
