

Partner country

Short note to Agenda item 11 from Norway

Expert Group Meeting on IMTS, 3-6 December 2007, New York

1

UN recommendations

- Country of origin is recommended in the case of import,
- Country of consignment should be collected as additional information for imports, and
- Country of last known destination is recommended to be recorded for exports.

Norwegian practice

- Norway follows the UN recommendations
 - Foreign trade statistics is largely based on customs data which again are based on the SAD questionnaire
 - Largest export items (oil and gas) not based on customs data
- There is no particular difficulty in handling the information obtained
- Received data may have poor quality and some times be of very little use or very difficult to utilise

3

Export Petroleum and Natural gas

- 2/3 of Norwegian exports
- Not included in customs territory
- Data from exporters and government

Direct landings of fish

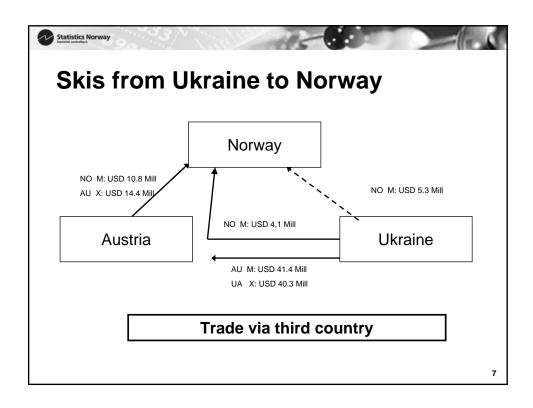

- Norway does not get information about export
- Importers probably record import with Norway as country of origin

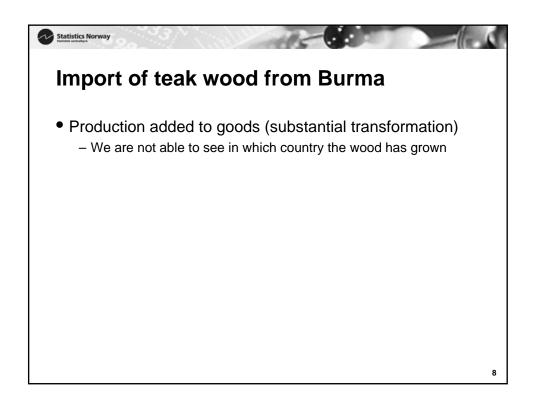

5

Export of salmon

- Trade via third country case:
 - auctions in Denmark, Norwegian exporters do not know the final destination country

BoP/National Accounts

- The BoP accepts partner country distribution as it appears in the foreign trade statistics (e.g. no adjustment for differences in change of ownership – crossing border)
- The BoP needs good quality on partner country to make
 - Mirror analysis
 - Aggregates across countries

9

Proposals/Conclusions

- The analytical use of trade by partner country is important
 - Two main user groups
 - Macroeconomic societies (BoP, trade policy analytics etc)
 - The market analysts
- Partner country should be recommended produced
 - Demand is greatest for
 - · Country of origin of import and
 - Country of final destination of export
 - Also demanded
 - Country of consignment (import and export)

Final comments

- Poorer quality on partner country statistics as globalisation increases
 - Are today's guidelines for reporting country of origin clear enough?
 - Alternatives to country of origin?
- Demand for statistics on country of consignments on exports
 - How useful?
 - Burden?
