

6. PERSISTENCE OF LOGOGRAMS

[<previous](#) - [next>](#)

Even in alphabetic scripts some logograms persist:

Examples are:

- the ciphers (**0,1,2**,..., in English: 'one', 'two', 'three'...) and
- signs like **+** (in English: 'plus'), **-** (in English: 'minus'), **&** (in English: 'and'), and, recently added, **@** (in English: 'at').
