Goals

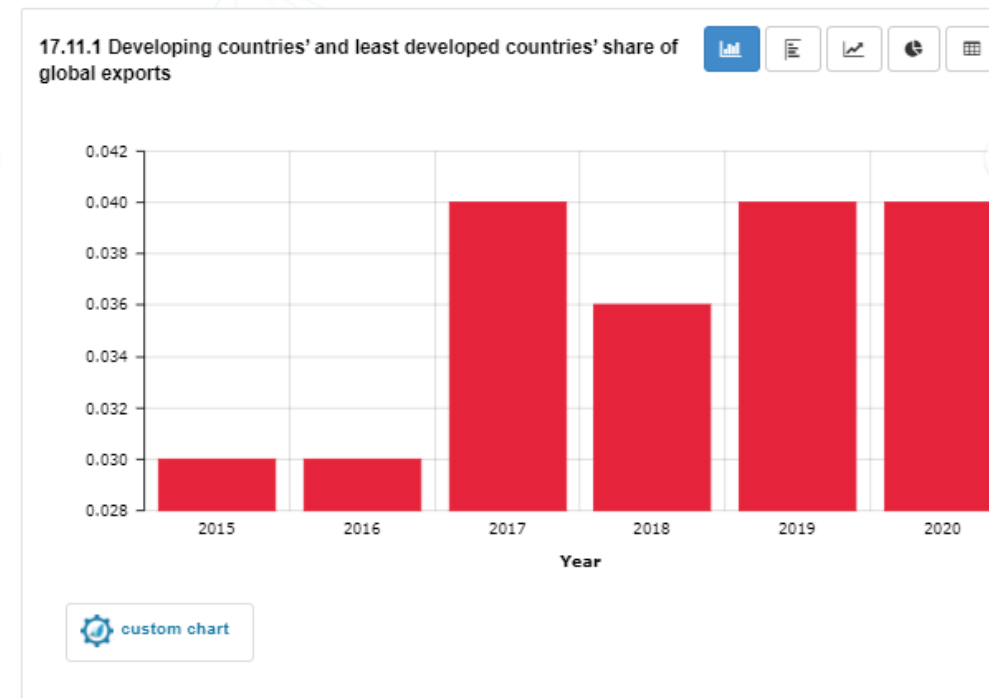

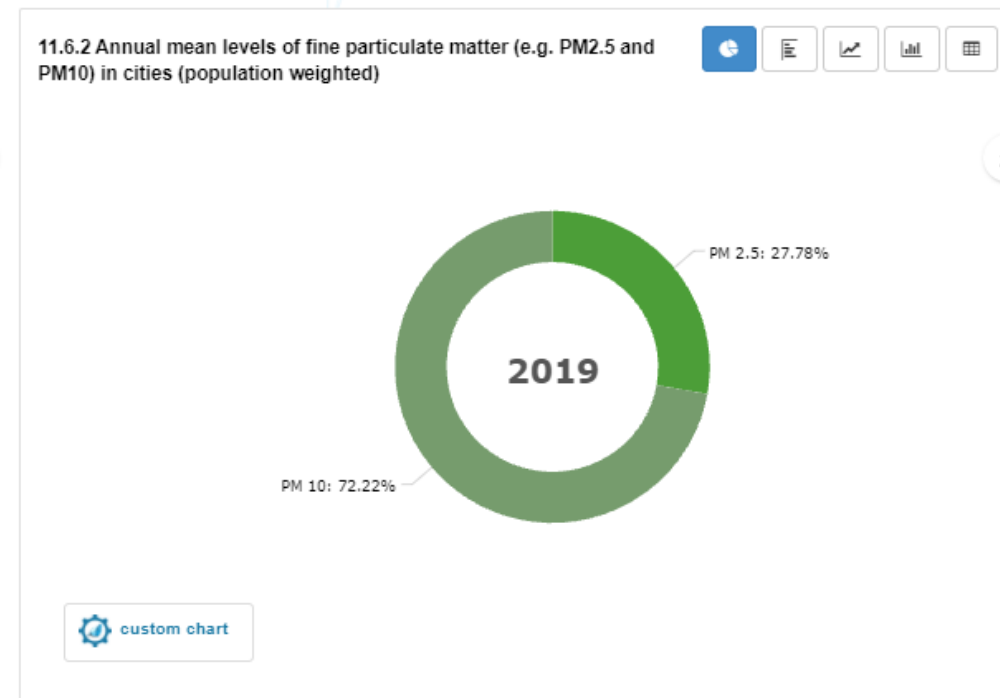

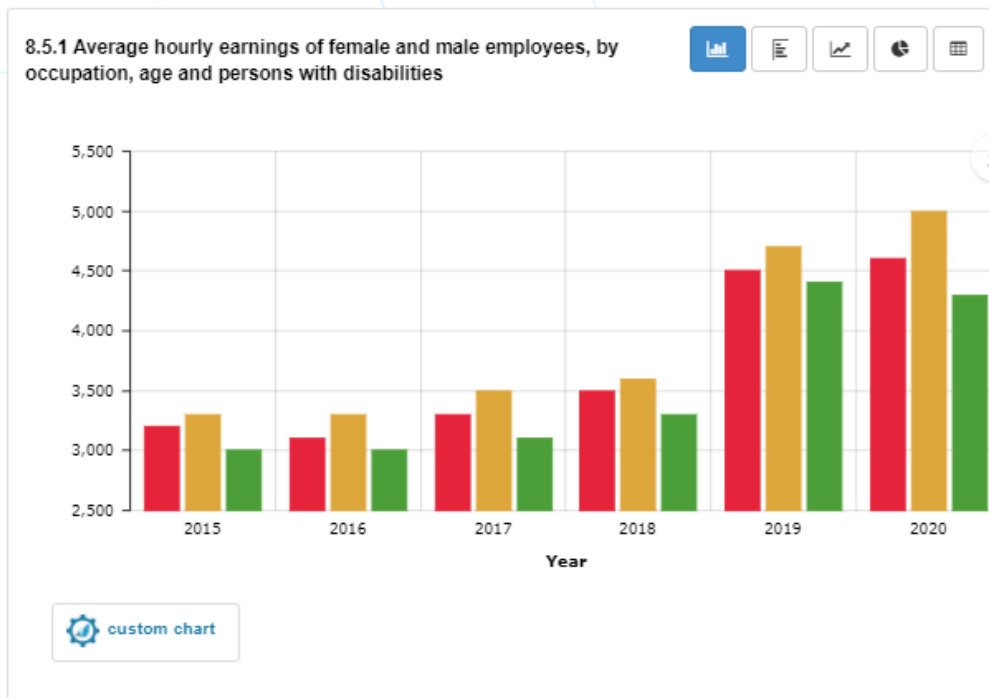

SUSTAINABLE DEVELOPMENT GOAL OF MONGOLIA

In 2012, With the "Rio +20" Conference on Sustainable Development, where Governments decided to develop global Sustainable Development Goals.SDG's are the continuation of the "Millennium Development Goals" that are due in 2015. The 70th session of the UN General Assembly adopted 17 goals and 169 targets of SDG's. SDG's have officially launched since 1st of January 2016.

[see more](#)

- ✓ Monitoring and evaluation of the progress and implementation of the SDGs
- ✓ Establishment of information flows
- ✓ Facilitation of the exchange of data between government agencies.

POLICY & LEGAL ENVIRONMENT

VISION 2050 long-term state policy of Mongolia:

Mid term Strategic Plan of NSO /2021-2025/

Improvement of Legal Framework
/2022.05.01/

Speaker of the Parliament
/2021.05/
Government integrated database

INTER AGENCY COOPERATION

MINISTRY OF DIGITAL DEVELOPMENT AND COMMUNICATION
2022, established

National data strategy

National meta data platform

SUPPORT FROM INT'L ORGANIZATION

Improve the Statistics law

TA project for Government integrated database

PREPARATION WORKS

A new UNIT for data established

META data analysis - SPS

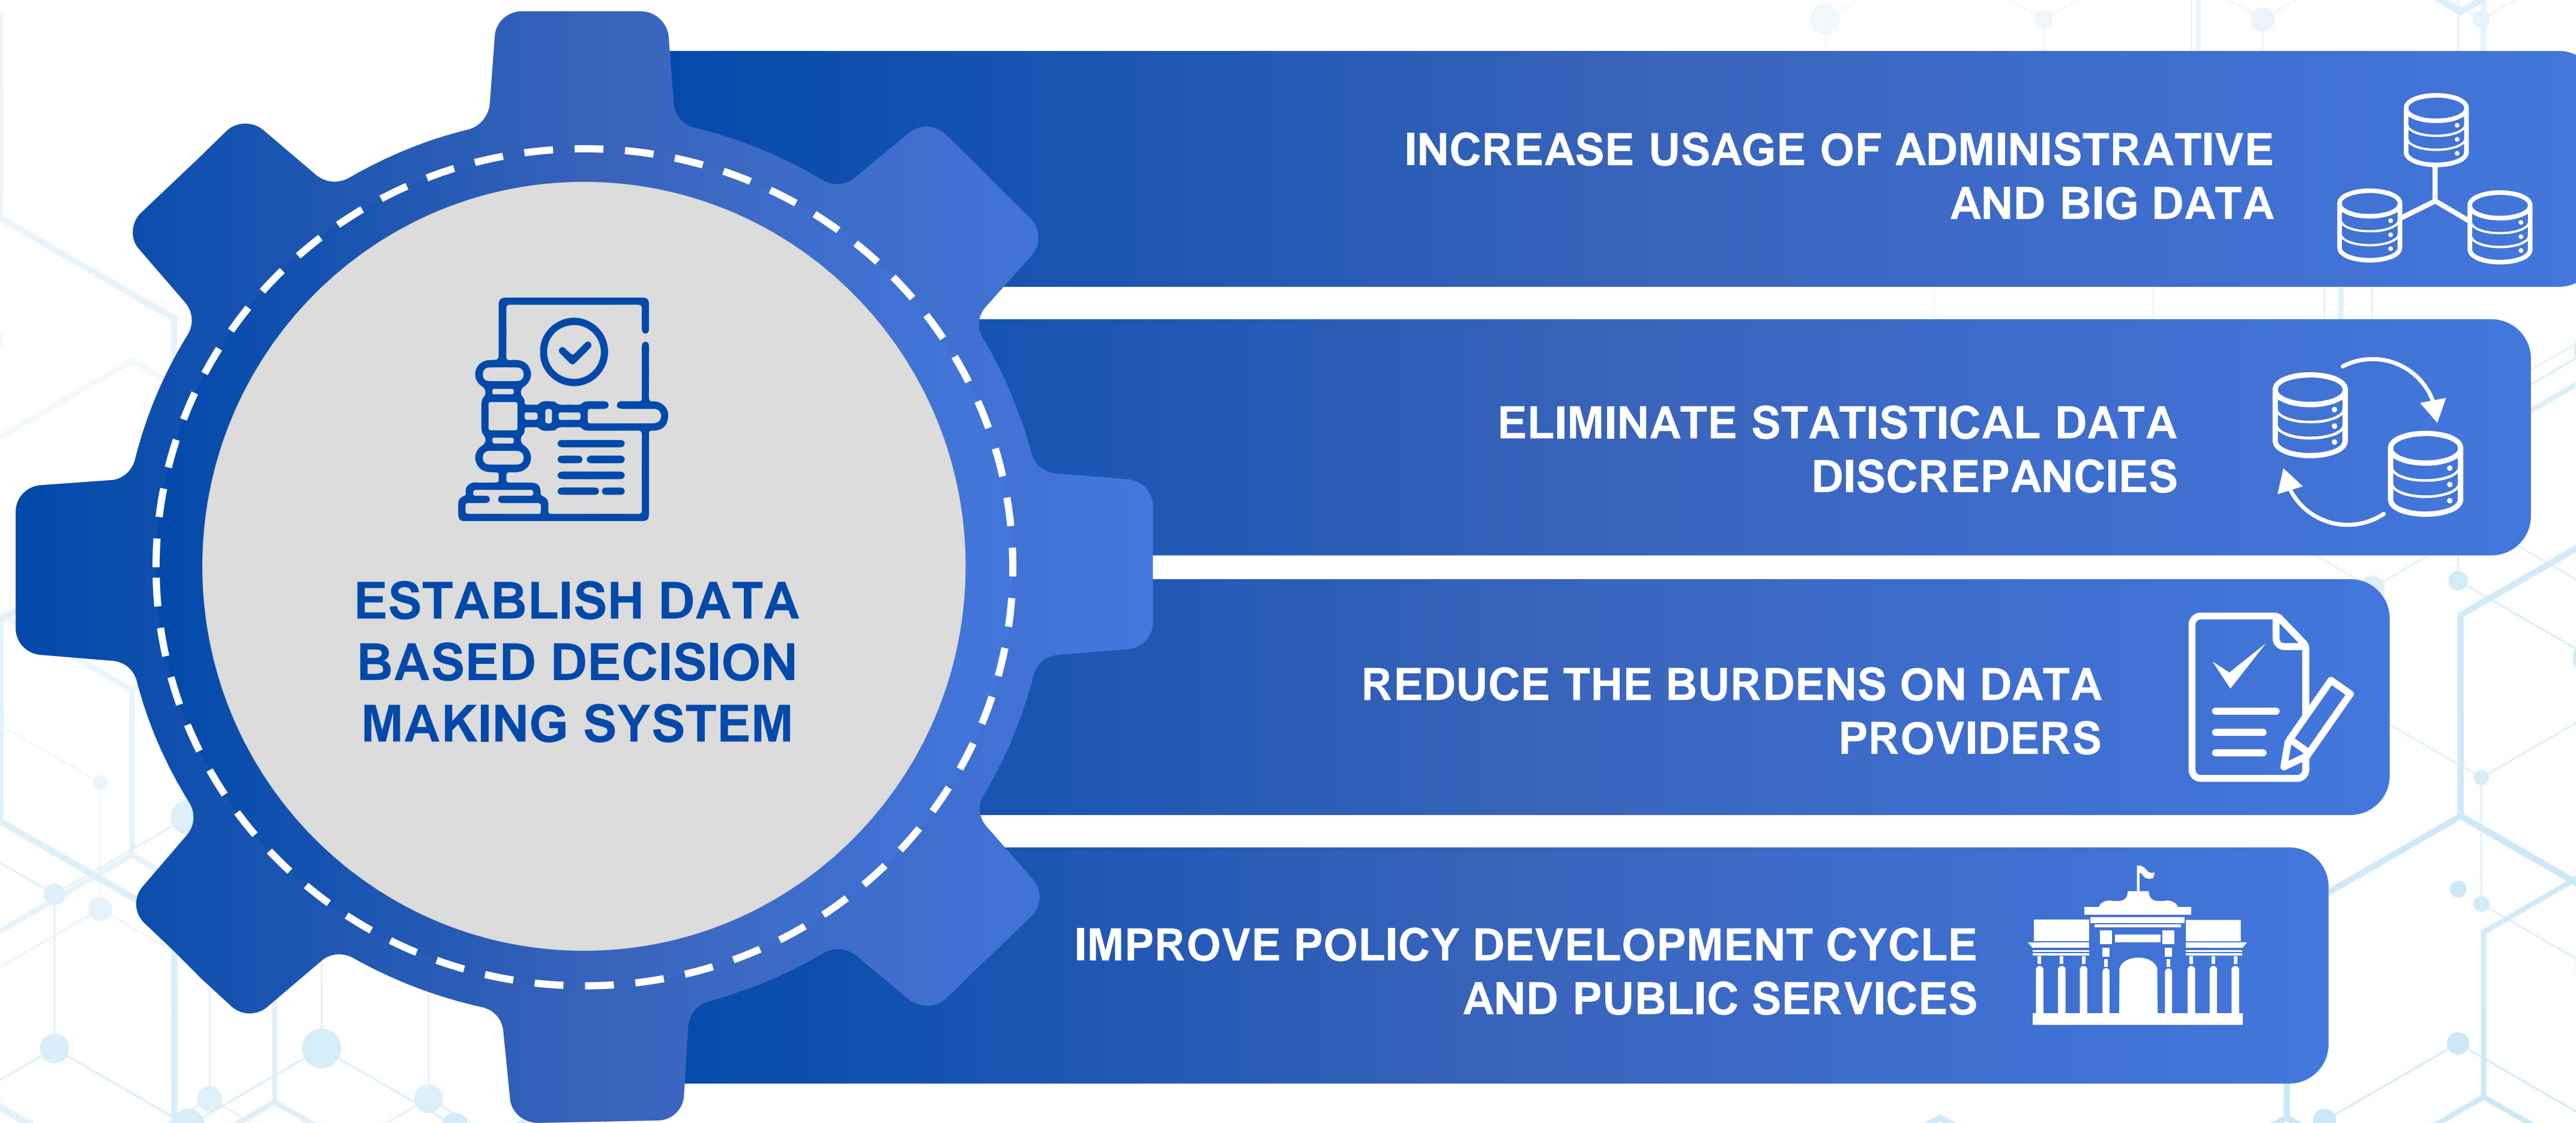

Assessment of the ADMIN databases by government organizations

CASE STUDY – BIG DATA FOR PRICE STATISTICS

PREPARATION

CALCULATION

RESULT

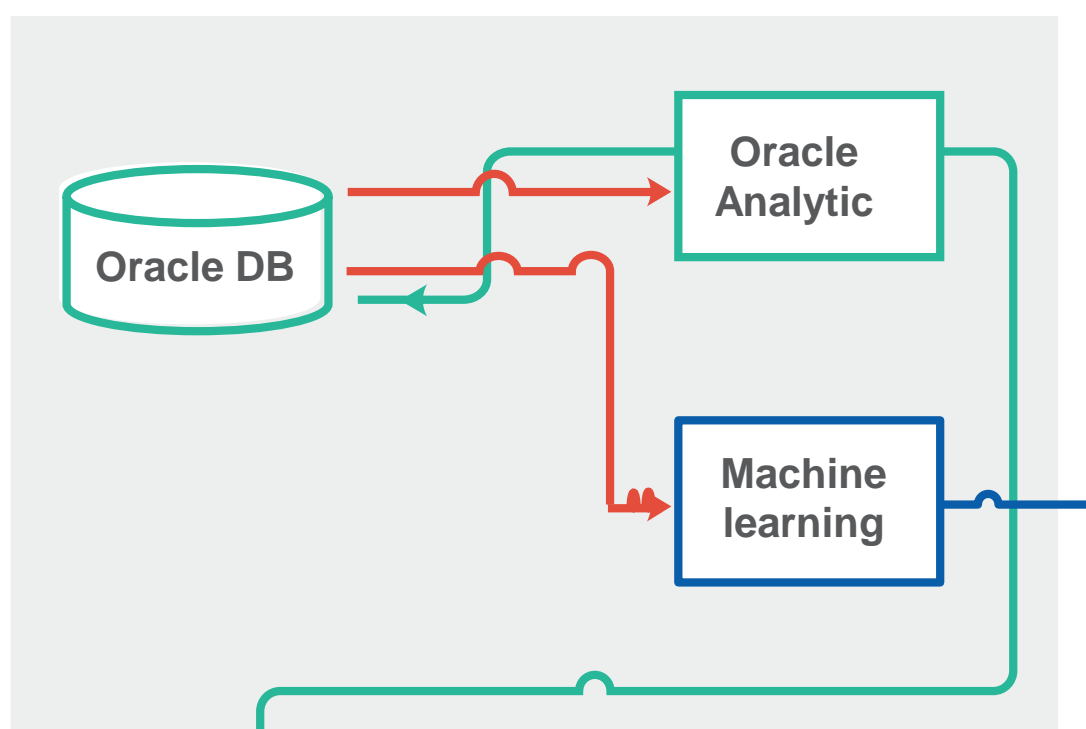

Real time data

Machine learning

Volume: Amount of data
= 89k enterprises
= 2 million average records in a day

COMMODITIES
/days, weeks, months/

32

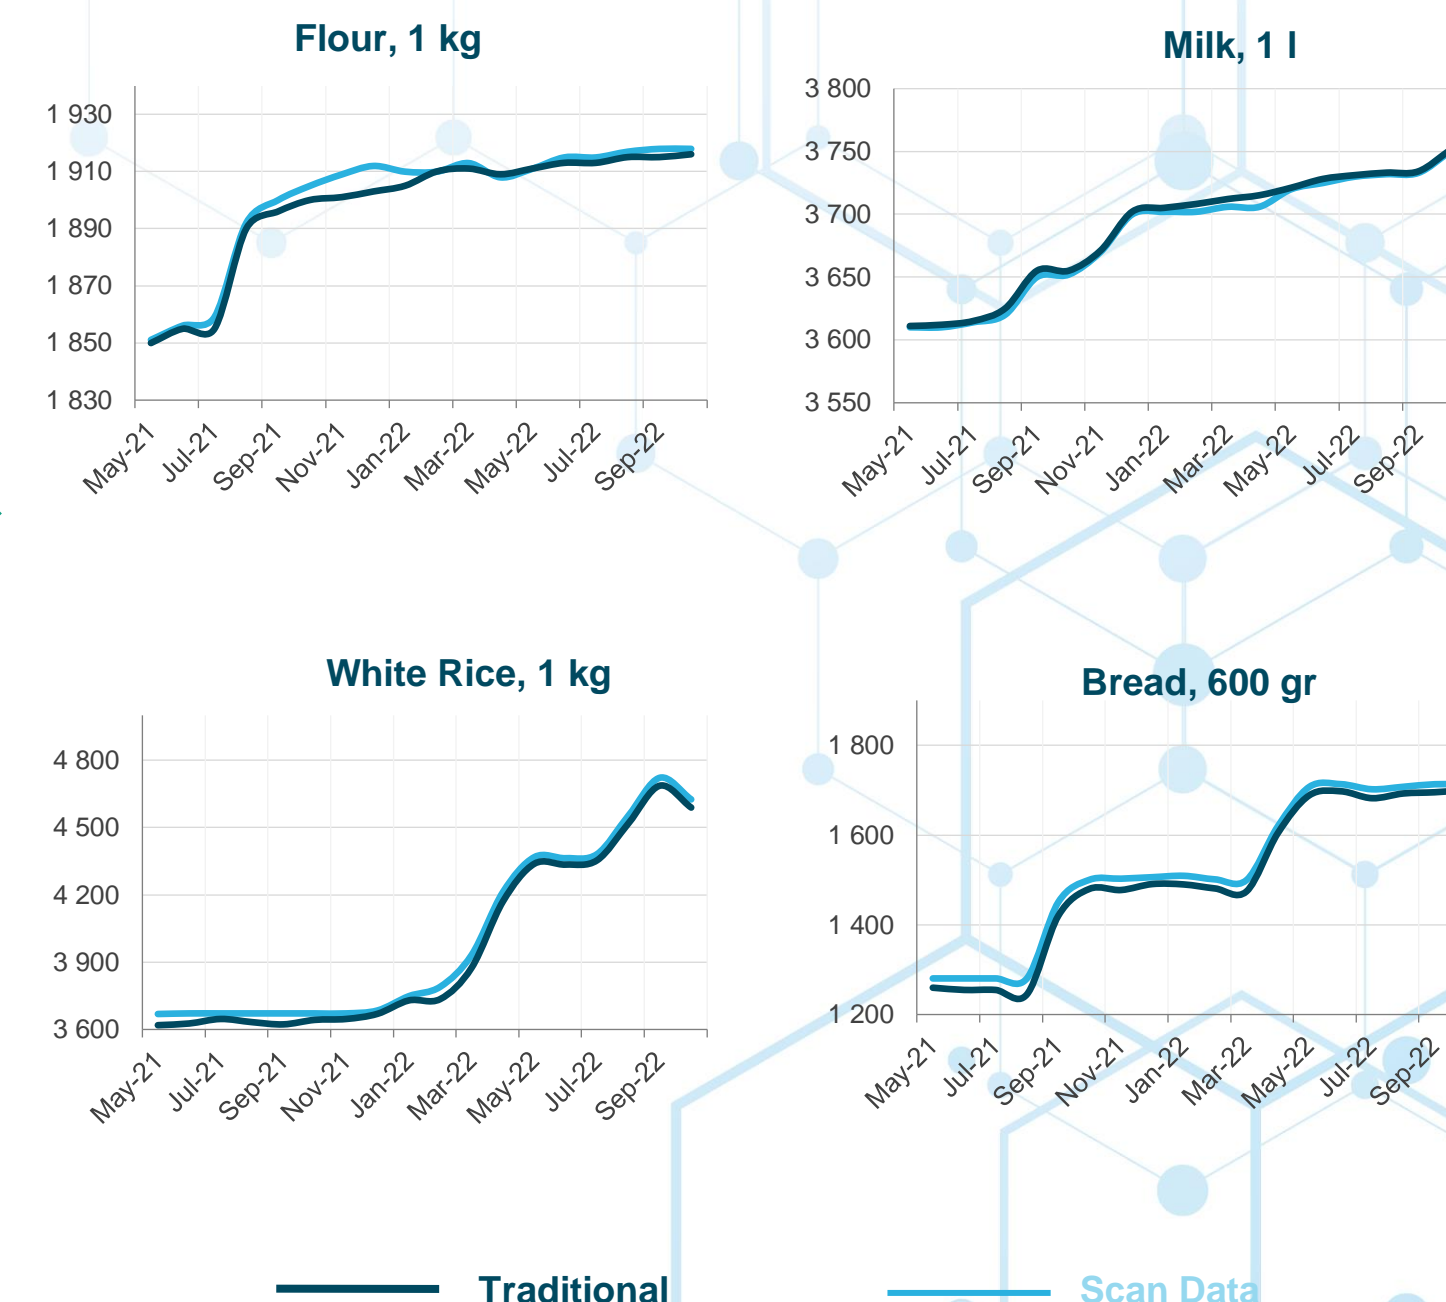

ALL SUPERMARKETS

10

SMs COVERED IN PILOT

7

Comparison of weekly commodity prices between traditional and scan data

Advantages:

- Reducing the financial burden
- Coverage increased: more than 80 thousand enterprises scanning data
- Data quality: Real time prices and data precision
- Reducing the burden on statistical surveys (interviewers and respondents)

Disadvantages:

- not fully collected consumer goods in CPI basket
- data storage and big data analyzing infrastructure are required
- to access to and collect data

EXPERIENCE IN CROP DATA USING RS TECHNIQUES

Project implementation plan and methodology

STATISTICAL DATA

- Sown/harvested area
- Harvest by crop type
- Cadastral registration
- On-site study data

SATELLITE IMAGE

- Sentinel 2 image
- Multispectral drone image
- Spectroradiometer measurement

ANALYSIS

- Random forest
 - Train/test dataset
 - Accuracy assessment
- Spectral angle mapper (SAM)
- To process dataset of field measurement

RESULT

- Overall accuracy - 76.9%
- Kappa coefficient - 63.2%
- By wheat, rapeseed, potato

- Overall accuracy - 92.9%
- Kappa coefficient - 89%
- By cabbage, beetroot, oats

TO INTRODUCE/ IMPLEMENT

- As for the methodology, our experience shows:
- Apply the SAM method for crop type classification,
 - Apply the random forest for crop yield estimation,
- Further,
- Develop an open-source system similar to sen2agri
 - Solve human resource and budget problem

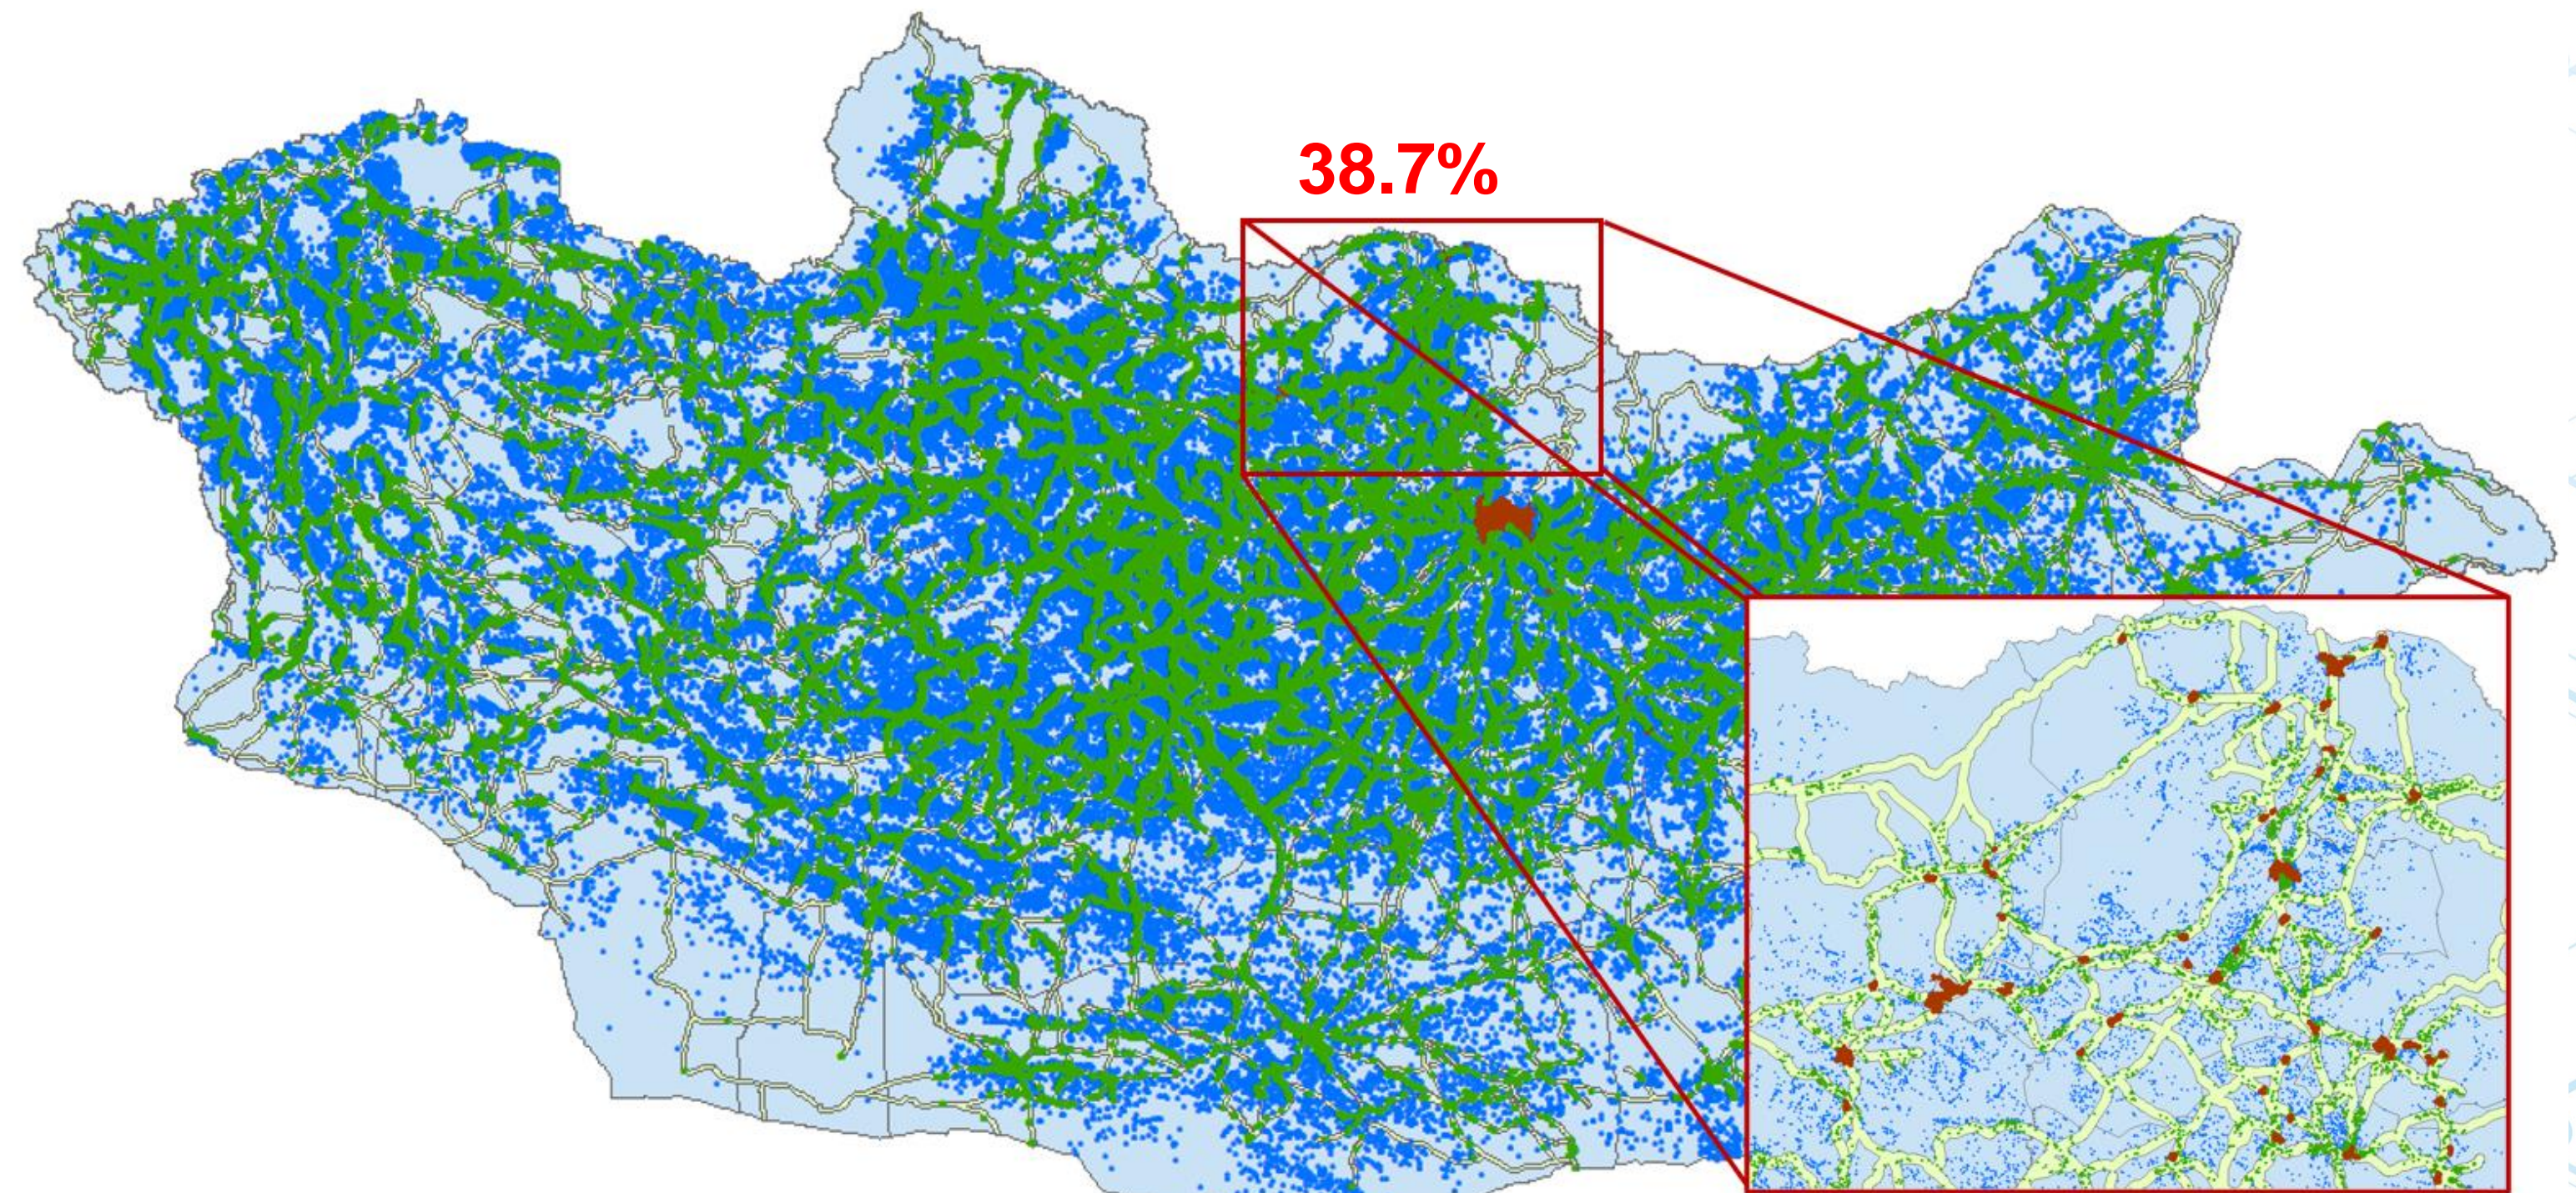

USE OF NON-TRADITIONAL DATA

Utilization of geospatial data and statistical database for production of SDG indicator
(Experimental estimation, ADB-NSO Project, 2019)

Indicator 9.1.1. Proportion of the rural population who live within 2 km of an all-season road -

Data source:

- Open street map
- Road network data (Ministry of Road and Transportation)
- Population statistics

- Household who live within 2km of road
- Household who live away 2km of road
- Center residential area
- 2kms buffer zone from road
