

Data Access and UN PET Lab

Plenary meeting of UNCEBD, 8 November 2022

Barteld Braaksma and Matjaz Jug

7th International Conference on Big Data and Data Science, Yogyakarta

Introduction

- ❖ Obtaining the **right source data** has always been a priority for official statistics
- ❖ Increasingly, we depend on **secondary sources** (both from governments and the private sector)
- ❖ Privacy-Enhancing Technologies (PET) can **make a difference** in obtaining such sources
- ❖ With the UN PET Lab we can (and should) now make the step from theoretical experiments to **practical applications**
- ❖ We have to identify sources and use cases to create **synergy** between the Task Team on Facilitation of Access to Privately-held Data and the UN PET Lab, to make **real progress**

Questions for discussion

- A. For **which high-value data sources** could PET help to unlock the data for statistics production?

- B. Which use cases could be implemented with **existing partners** to show a PET-based approach works?

- C. Are there any **other barriers** (for example non-technical) that we should specifically consider?
