

Informing Climate Change and Sustainable Development Policies with Integrated Data

BILBAO. SPAIN 10-14 JUNE 2024 #UNBigData2024

# Mobile Phone Data for Policy: Theory of Change and Maturity Assessment

Thomas Smallwood, PhD.

Flowminder

# Global Data Facility MPD for Policy: Background

Launched in 2023, the programme aims to 'mobilise investments to accelerate local capacity to integrate the responsible use of anonymized, aggregated MPD into National Data systems for real-time statistics and responsive policy solutions'.

Flowminder tasked with developing a WB-GDF programme Theory of Change (ToC) and Maturity Assessment

Developed in partnership with the WB-GDF project team, drawing on collective experience of what works' to get MPD into use

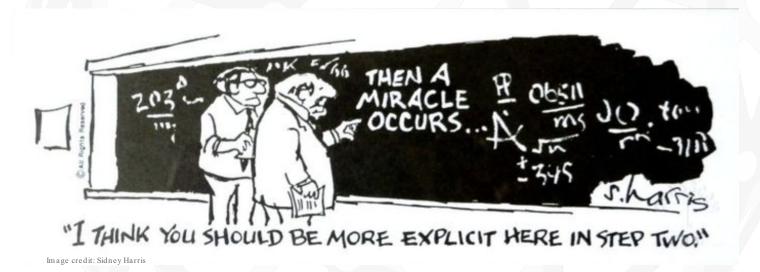

Theory of Change

**Mobile Phone Data for Policy** 

## **Purpose**

A theory of Change is essentially a **comprehensive description** and **illustration** of **how** and **why** a desired change is expected to happen in a particular context.

## Structure

Country pathway

to Impact

(Country actors:

MNO(s) NSO/MDA

Regulator etc)

### **Pre-conditions** EOI->Proposal

### **Actions-Outputs**

### Impact

- · Key stakeholders are committed to exploring a partnership. MoU established (at least between MNO and NSO/MDA, with proposed roles
- · There is a clearly identified lead to drive forward the initiative (clear country-level ownership)
- · The incentives, value exchanges, of participating MNOs and other stakeholders are understood and mechanisms to meet these are identified.
- No blocking factors, (eg Data Protection Agency, National Intelligence Agency are "non-objecting", plans comply with country regulation.)

### **Data Pipeline:**

· At least one MNO committed in principle to

### Capability:

- · Partners have available staff resource to enable them to engage, potentially with seed funding.
- · There is foundational capacity at the recipient organisation (NSO/MDA)

Stakeholders understand common models for data access, the processing pathway and potential benefits of using NSO model (data quality, integration into data ecosystem and use). Technical requirements for chosen approach are well specified for MNO. There is an opportunity for win-win value exchange between data controller and recipient.

- · Legal partnership data sharing agreements signed · Governance established eg SteerCo, civil society
- **Data Pipeline:**
- · MNO data, infrastructure, capability assessed with specialist support, bespoke pipeline plan
- · Data pipeline , required infrastructure established, NSO/data users access aggregate data

### Capability - training received:

- · MNO trained on maintaining secure data pipeline, production of aggregates, QA
- · NSO trained on data use and limitations, how to
- account/adjust for biases in the data · NSO (and/or MDA) on how to combine mobile data statistics with other use case specific data

### Data and Use cases:

- · NSOs engage with end users to develop use case. and with wider eco-system on MPD data
- · End users specify the outputs they need, how they might integrate into their workflows
- · Survey data are generated / accessed for purpose of MPD bias adjustment and scaling
- · Additional data for use cases is accessed

### Assumptions:

If countries are using standardised methods they will produce robust, comparable indicators efficiently. The use case has strong demand with clear operational need, and is feasible with available methods and timeframe. Trained staff are retained.

· An active and mutually responsive public-private partnership with shared purpose, meeting all incentives and needs

Outcomes

### **Data Pipeline**

· MNO providing sustained, secure, high quality, data flows that protect privacy of subscribers

### Capability - outcomes:

- · MNO is processing mobile phone data in a secure, automated, privacy protecting and standardised manner, quality assuring their data and maintaining the data pipeline
- · NSO understands the uses and limitations of the data, how to interpret it, and the range of applications and use cases, and are able to advocate for it
- NSO analysts able to produce population / mobility indicators from aggregates, applying standardised methods, accounting for bias, and combine it with other data for policy use

### Data and Use cases:

- · Data is adjusted for biases as required using survey data (by NSO / specialist implementing partner)
- · High quality data outputs are available to decision makers and being used for a use case

### Assumptions

Decision-makers know and trust the data and have confidence in sutainable access. Use of the data results in better-informed decisions being made, improving accuracy, timeliness and effectiveness of policies and programmes. Stakeholders realise value from their engagement in the programme and are incentivised to continue in the long term.

Mobile data is being used systematically to enhance the evidence base for policy and decision making

Mobile data is integrated into the national data system such that country ownership is sustained, with limited dependence on

National institutional environment is strengthened with enablers and safeguards to responsibly use MPD for policy and

Government and other data users are better able to assess and predict policy challenges, target solutions, and monitor realtime progress on a wide range of Sustainable Development Goals.

Contribution to achievement of SDGs relating to:

Transport

Crisis response Climate change

Displacement issues (National statistics)

Digital Connectivity + Mobility

## **Country-level preconditions**

## Partnership:

- Key stakeholders are committed to exploring a partnership
- MoU established
- A clearly identified lead and country-level ownership
- The incentives, value exchanges, of MNOs and other stakeholders are understood
- No blocking factors eg compliance with country regulation

## **Data Pipeline:**

At least one MNO committed in principle to sharing data

## **Capability:**

- Partners have staff resource to enable them to engage, potentially with seed funding
- There is foundational capacity at the recipient organisation (NSO/MDA)

## **Country-level outputs**

## Partnership:

- Legal partnership data sharing agreements signed
- Governance established eg SteerCo, civil society

### **Data Pipeline:**

- MNO data, infrastructure, capability assessed with specialist support, bespoke pipeline plan
- Data pipeline , required infrastructure established, NSO/data users access aggregate data

## Capability (training received):

- MNO trained on maintaining secure data pipeline, production of aggregates, QA
- NSO trained on data use and limitations, how to account/adjust for biases in the data
- NSO (and/or MDA) on how to combine mobile data statistics with other use case specific data

### Data and use cases:

- NSOs engage with end users to develop use case, and with wider eco-system on MPD data
- End users specify the outputs they need, how they might integrate into their workflows
- Survey data are accessed for MPD bias adjustment and scaling
- Additional data for use cases is accessed

## **Country-level outcomes**

### **Partnership:**

 An active, mutually responsive public-private partnership with shared purpose, meeting all incentives and needs

## **Data Pipeline:**

■ MNO providing sustained, secure, high quality, data flows that protect privacy of subscribers

### **Capability outcomes:**

- MNO is processing data in a secure, automated, privacy protecting and standardised manner, quality assuring their data and maintaining the data pipeline
- NSO understands the uses and limitations of the data, how to interpret it, and the range of applications, and are able to advocate for it
- NSO analysts able to produce population / mobility indicators from aggregates, applying standardised methods,
   accounting for bias, and to combine it with other data for policy use

### Data and use cases:

- Data is adjusted for biases as required using survey data (by NSO or specialist implementing partner)
- High quality data outputs are available to decision makers and being used for a use case

# **Key assumptions**

- Stakeholders understand common models for data access, the processing pathway and benefits of working with and through NSO/MDAs (data quality, integration into data ecosystem and use)
- Technical requirements for chosen approach are well specified for MNO
- There is an opportunity for win-win value exchange between data controller and recipient
- If countries are using standardised methods they will produce robust, comparable indicators more efficiently
- The use case has strong demand with clear operational need, and is feasible with available methods and within the expected time frame
- Decision-makers know and trust the data and have confidence in sustainable access
- Use of the data results in better-informed decisions being made, improving accuracy, timeliness and effectiveness of policies and programmes
- Stakeholders realise value from their engagement in the programme and are incentivised to continue in the long term

**Maturity Assessment** 

**Mobile Phone Data for Policy** 

## **Purpose**

- Granular descriptions of the different dimensions that constitute an MPD initiative and what different levels of maturity might look like for each dimension.
- Purpose:
  - o Identify that types of support than an initiative needs to develop
  - Assess how an initiative has progressed within the programme

## Structure

- Tier 0: High-level themes addressing broad questions
- Tier 1: Core dimensions of an MPD initiative
- Tier 2: Stakeholder-specific dimensions
- Tier 3: Granular components related to specific requirements for an initiative

# Tier 0: High-level themes

Dimension	Question
Feasibility	"To what extent do the conditions in a country allow for and facilitate the use of MPD for official statistics?"
Impactfulness	"To what extent does the use of MPD for official statistics result in improved decision-making that benefits the people of a country?"
Sustainability	"To what extent do current structures and processes enable the long-term use of MPD for official statistics?"

# **Tier 1: Core dimensions**

Tier 0	Tier 1	
Feasibility	CONTEXTUAL VIABILITY	
	STAKEHOLDER ENGAGEMENT AND ALIGNMENT	
	SUITABILITY OF DATA INFRASTRUCTURE	
	SUITABILITY OF DATA ENVIRONMENT	
	HUMAN RESOURCE CAPACITY AND AVAILABILITY	
Impactfulness	IDENTIFICATION AND IMPLEMENTATION OF APPLICATIONS	
	POTENTIAL FOR AND PROTECTIONS AGAINST MISUSE	
Sustainability	SUSTAINABILITY PROSPECTS	

# Tiers 2 & 3: Contextual viability

Tier 2	Tier 3
Legal & regulatory framework	Comprehension of data protection and privacy legislation and regulations
	Comprehension of statistics legislation and regulations
	Comprehension of MPD-specific legislation and regulations
	Comprehension of legislation or regulations related to work of the data controller (e.g. Mobile network operator licensing, scope of telecommunications regulator)
	Stability of legislation and regulations impacting the use of MPD
Data governance policies of the data controller(s) (i.e. MNOs or	Suitability of data governance policies for the safe and secure storage and processing of MPD for official statistics
telecommunications regulator)	Suitability of data governance policies export of MPD-derived anonymised aggregates and indicators for official statistics
Data governance policies of the data end-users (e.g. NSO) other MDAs)	Suitability of data governance policies for the safe and secure analysis of MPD-derived anonymised aggregates and indicators for official statistics
	Suitability of data governance policies for the safe and secure publishing of MPD-derived statistics
Public perception	Public understanding and acceptance of the use of MPD for official statistics

# Tiers 2 & 3: Suitability of data infrastructure

Tier 2	Tier 3
Individual Data Controller(s) (e.g. Mobile Network Operator(s) (MNOs), telecommunications regulator)	Access to necessary hardware to store the necessary volumes of MPD
	Access to necessary hardware to process the necessary volumes of MPD
	Necessary software tools to appropriately manage and process the quantity of data (volume, frequency, and complexity) (e.g FlowKit)
	Suitable tools and processes for the secure export of MPD-derived anonymised aggregates and indicators
	Frequency and regularity of MPD
Data and years (a.g. National Statistical	Access to necessary hardware to process anonymised aggregates and/or indicators derived
Data end-users (e.g. National Statistical Office (NSO), other Ministries, Departments and Agencies (MDAs))	from MPD
	Suitable data security tools and processes for the secure storage and analysis of MPD-derived anonymised aggregates and indicators
Partnership-level data coverage	Sufficient geographic coverage of the (combined) mobile network(s) of participating MNO(s)
	Sufficient representativeness of the (combined) subscriber base of participating MNO(s)
	Sufficient (combined) market share of participating MNO(s)
