# Agenda

- Business Opportunity
- Solution – Minimal Viable Product
- First Results and Further Enhancements
- Lessons learned so far

# Beyond Research: Fully Integrating AI

Vision

**Full responsible and secure integration of AI, including Gen-AI and LLMs, in Statistics Canada's processes to deliver relevant programs, efficient operations and enhanced services to Canadians.**

Roadmap

**Use cases:**  
Demonstrate  
business value

- Ideation
- Prioritization
- Implementation
- Value realization

**AI  
governance**

- Steering committee
- Ethics
- Legal
- Technical

**AI, Gen-AI  
and LLM  
tools**

- Infrastructure
- AI platform
- Environments
- COTS – Co-pilot etc.

**Gen-AI  
playbooks**

- Best Practices
- Guidelines
- Checklists
- Ways of working

**Support  
employees**

- Communication
- Change Management
- Training

# Business Opportunity

Business Challenge - Dissemination	Gen-AI Project Outcomes
<p><b>Problem Statement</b></p> <ul style="list-style-type: none"><li>• External website search is a challenge for end-users</li><li>• Accelerate discovery of StatCan information by the end users</li></ul> <p><b>Indicators of Success</b></p> <ul style="list-style-type: none"><li>• Internal expert validation feedback</li><li>• Retrieval of correct information to respond to the user query</li><li>• Validation with Client Engagement group</li><li>• Validation with Government of Canada key stakeholders</li></ul>	<p><b>Technical</b></p> <ul style="list-style-type: none"><li>• Identify repeatable solution artifacts<ul style="list-style-type: none"><li>• Common development environment</li><li>• Common production support</li><li>• Reusable integration artifacts</li><li>• Common DSc solution stack</li></ul></li><li>• Security requirements for approving Gen-AI development &amp; production</li><li>• Compare performance of GPT 3.5 vs. 4 – compute power and costing considerations</li></ul> <p><b><i>Maturing IT knowledge of AI technologies</i></b></p>

# Solution

## **StatCan website GenAI Chat Bot (IntelliStatCan) using Retrieval-Augmented Generation (RAG)**

### **Infrastructure**

- Back-end: Data Analytics as a Service Development Environment + Production
- Front-end: Webapp hosted in Kubernetes

### **AI Engine**

- MS Azure OpenAI Model API service (Model as a service): GPT 3.5 Turbo 16K vs. GPT-4 Omni
- Azure AI Search (formerly Cognitive Search)

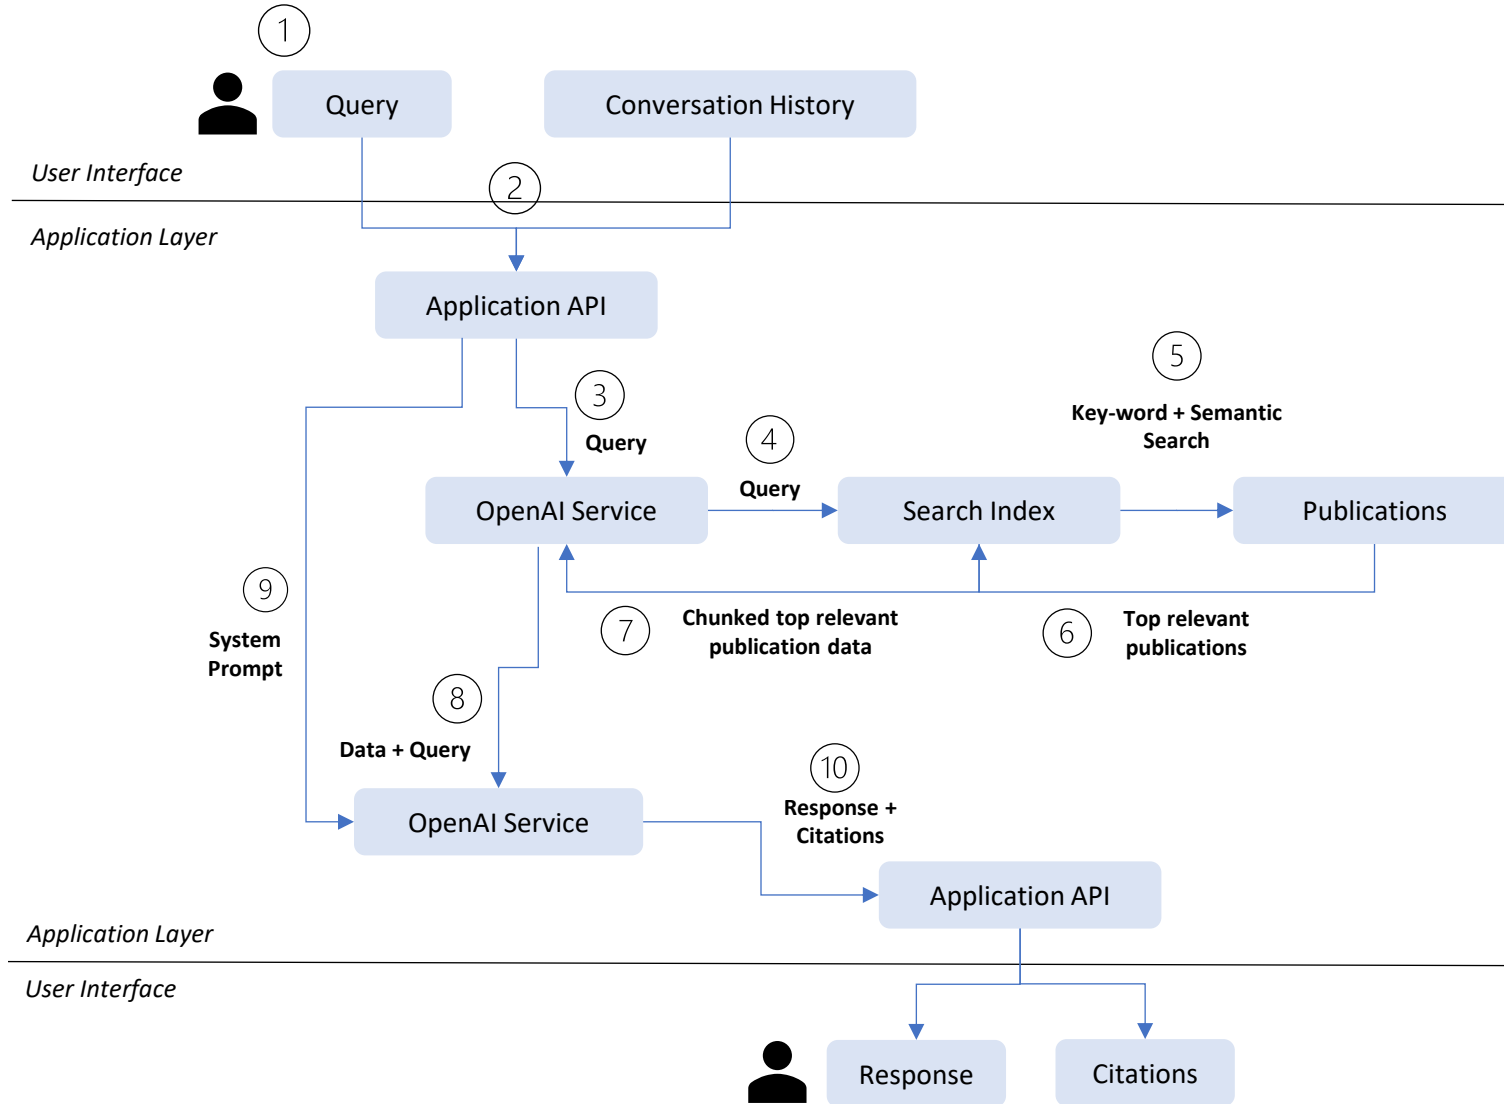

### **Data**

- Production: 18,000+ website publications in pdf, both English and French
- Publications are being added daily
- Exclude: Tabular Data, and non-text media (graphics, videos, etc.)

### **Technology stack – see Annex A**

# System Flow – Anatomy of a Query

- ① User submits a query using the Intelligent Search User interface.
- ② User query, as well as any conversation history from the active session, is passed on to the application API service.
- ③ User query and conversation history is sent to the OpenAI service for response generation.
- ④ The user query is passed on the Azure Search index to retrieve relevant publication content.
- ⑤ The search index, which contains all of the publications in scope, is searched for relevant content.
- ⑥ The search index returns the most relevant publications based on preconfigured threshold.
- ⑦ The relevant content is served as chunked text blobs to OpenAI service for integration into AI prompt.
- ⑧ The initial user query, the relevant data content, and the system prompt configured with the application, is passed along to OpenAI service for response and citations.
- ⑨ The AI-generated response, as well as the publication citations, are passed back to the user via the application API.

# Phase 1: Development of MVP Solution

November-December 2023 - Rapid Prototyping (approx. 6 weeks)

January 2024 - Agile Production Roadmap (approx. 9 weeks)

February 27/28, 2024 - Hackathon

March 2024 –Architecture and cyber approvals, accessibility and responsible ML reviews, governance approvals

March 28, 2024 – MVP release and testing (through May)

See Annex B – Examples of queries and test volumes

# Phase 1: MVP Results

Configured a **production environment** incorporating **four new GenAI-related technologies** (Azure OpenAI, AI Search, Cosmos dB, Azure Function App)

**User expectations** based on ChatGPT (wanting the tool to do and answer more – constrained by focusing on pdf publications only)

Users experienced with the full website and would like Tabular data

Testing should be expanded beyond Subject-Matter experts (e.g., persons not experienced with prompting)

A good start, however **quality of responses** needs to be improved:

**Search** is as (or more) complicated as GenAI in a RAG

**Orchestration** features are not sufficient for citizen-public release

# Next Steps – IntelliStatCan 2.0

- **Enhancements** being applied to the solution (now – January 2025):
  - Search: from **Full-Text Search with Semantic Reranking** to **Hybrid Search with markdown-based chunking and scoring profiles**
  - **Custom workflow orchestration**: from standard workflow orchestration built in Azure OpenAI to custom workflow orchestration
  - **Usability**: focus users on asking questions about available content (publications) rather than wide-open questions (e.g., display top 5 questions asked; show masking to suggest wording of questions etc.)
  - **Migrate to GPT-4o**

# Next Steps – IntelliStatCan 2.0 (cont-d)

---

Response Quality Testing Framework (December 2024)

---

Iterative testing and response quality improvements (e.g., prompting, scoring, hackathon) (December 2024 – February 2025)

---

Governance reviews and approvals (architecture, cyber, responsible ML/AI, Accessibility etc.) (January – February 2025)

---

Production support & release plans; securing compute capacity

---

Complete release for Government of Canada testing (February 2025)

---

Further enhancements in user experience (see Annex C)

---

# Lessons Learned

## **Quality standards place additional requirements on AI applications (e.g., RAG):**

Teaching AI business logic and quality expectations via prompt design, fine-tuning, search optimization, and orchestration optimization – leverage entire tech stack

## **Finding balance to leverage technology and meet expert expectations**

## **Cybersecurity matters – include from the beginning**

## **Data is important – not only data quality but also data engineering and expecting continuous changes in datasets**

## **Fast evolving technology – stretching typical processes to incorporate ongoing changes**

# Annex B: Result from IntelliStatCan - Citations

Data on wages for immigrants in 2018?

The median entry wage for immigrants admitted to Canada in 2017 was the highest to date, reaching \$30,100 in 2018. This value surpassed the previous high of \$26,500 for 2017 outcomes of immigrants admitted in 2016. The median entry wage of immigrant taxfilers with work permits surpassed the Canadian median wage of \$37,400. In the 2018 tax year, among immigrants admitted in 2017, median entry wages were highest for those with both a study and work permit (\$44,000) and those with a work permit only (\$39,100). Immigrant taxfilers without pre-admission experience had a median entry wage of \$22,600, and those with a study permit only had a median wage of \$14,100 <sup>1</sup>.

Income and mobility of immigrants, 2018 Released at 8:30 a.m.Eastern time in The Daily, Monday, February 1, 2021

The COVID-19 pandemic has affected many aspects of Canadian immigration, including reduced permanent resident admissions and lower labour market outcomes. This article presents the latest economic and mobility outcomes of immigrants admitted to Canada using data from the 2019 Longitudinal Immigration Database, and provides baseline estimates prior to the pandemic for future analyses. In recent years, the profile of immigrants admitted to Canada has changed. The median entry wage for immigrants admitted to Canada in 2017 was the highest to date, reaching \$30,100 in 2018. This value surpassed the previous high of \$26,500 for 2017 outcomes of immigrants admitted in 2016. These new data also highlight a decreasing gap between the immigrant median entry wage and the Canadian median wage (\$37,400). Factors such as pre-admission experience, knowledge of official languages, and category of admission, among other socioeconomic characteristics, could contribute to the rise in median entry wage compared with previous admission years. A growing share of immigrants have pre-admission experience in Canada
