

## Session 4. 31 July 2013

### Questions for group discussion

#### AM: What to measure?

Please keep in mind that these questions are to be answered so that they are relevant for a survey on gender and asset ownership.

- What are the core assets that we want all countries to include? How are these defined?
- What additional assets should be included by specific countries? How are these assets defined?
- For each asset, how should ownership be defined? Do we want to include more than one measure of ownership and control?
- Background information:
  - o What basic information should be collected in the survey to allow for analysis of the asset data? demographics, income?
  - o What other information is needed on assets? Mode of acquisition? (Value will be discussed tomorrow.)
  - o Why are they to be collected?
- What information on the context is needed to understand asset ownership? How should this be obtained?
