

Day 3. How to Measure

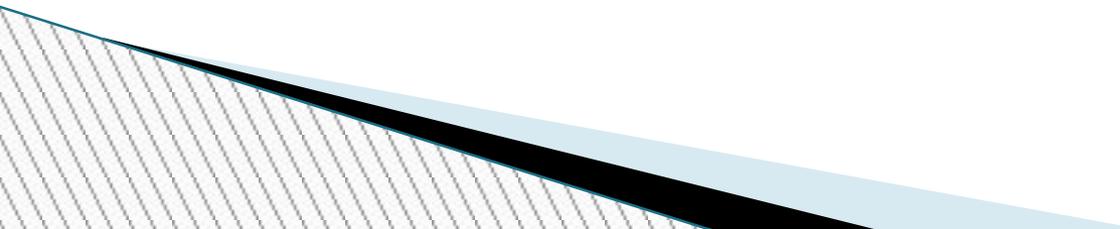

Purpose of survey

- ▶ Do we want full information on ownership of all assets within household? Do we need multiple people interviewed to do this?
 - ▶ Do we want to compare men and women?
 - ▶ Do we want to look at comparisons of men and women in the same household?
- 

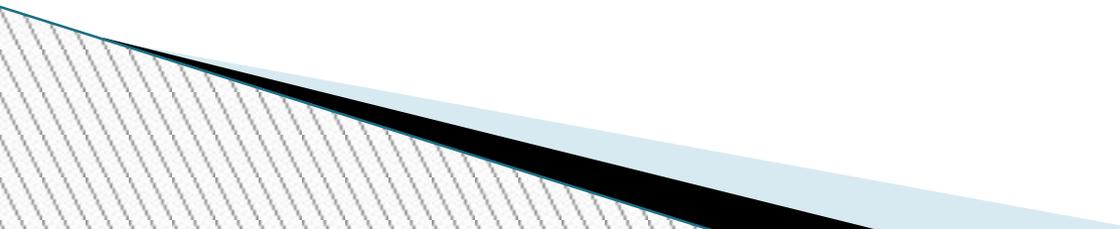

How many to interview?

- ▶ One or two people will enumerate most household assets in small households.
 - ▶ If multiple adults in household, may need more people for full enumeration.
 - ▶ For gender analysis, need to interview men and women.
 - ▶ For intrahousehold analysis, need men and women in the same household.
 - ▶ If we want information on some groups, such as widows, may need to find a way to ensure that they are interviewed.
- 

Who to Interview?

- ▶ One person: household head
 - ▶ One person: person most knowledgeable
 - ▶ Principal couple
 - ▶ One man and one woman
 - ▶ One or two randomly chosen people
 - ▶ Everyone that is relevant for a specific module.
Ask each person about their own...
- 

Reconciling Multiple Responses

- ▶ How to respond when different people within the household provide different and inconsistent information:
 - ▶ 1) Identify rules to reconcile to obtain one measure of ownership for the household.
 - ▶ 2) Use individual level data to understand issues such as empowerment.
- 

Structure of Questionnaire

- ▶ If multiple people interviewed, need an inventory to ensure no double counting of assets by different people.
 - ▶ Inventory questions may be incorporated into relevant modules, such as housing, agriculture, businesses, etc.
 - ▶ How much information do we want from individual owners?
 - ▶ Even if only one person interviewed, need to be sure that assets are not double counted in different sections.
-
