

Reference metadata template for data reported on the Sustainable Development Goals (SDGs)

The purpose of this template is for international agencies to submit reference metadata on the agreed upon tier I and II global indicators and associated data for which they are responsible, in order to monitor the Sustainable Development Goals (SDGs) and targets in a consistent manner. In order to ensure coherence and consistency of the metadata that will be presented alongside the SDG indicator database, we are requesting uniform reference metadata on the global indicators and on associated data that you are reporting using this standard template.

While we realise this form is detailed, your willingness to provide this reference metadata in a standard format will be vital to users better understanding of the global indicators and associated data you have provided. We hope any metadata submitted previously can be copied and pasted into the relevant section of this form. Any metadata that was previously submitted to UNSD prior to July 2016 can be found at: <http://unstats.un.org/sdgs/iaeg-sdgs/metadata-compilation/>.

This form should be completed by the international agencies that provided their data for inclusion in the SDG progress report and associated database. Please replace the instruction text shaded in yellow with the appropriate text describing the reference metadata for that section (i.e. definition, rationale, etc.). Please try to make your responses as concise as possible while making sure to include all relevant information. For more detailed methodological information, a link can be included in the reference section (see page 4).

If there are any questions regarding SDG metadata or this form, please contact Zin Lin at lin@un.org.

Goal 16: Promote peaceful and inclusive societies for sustainable development, provide access to justice for all and build effective, accountable and inclusive institutions at all levels

Target 16.3: Promote the rule of law at the national and international levels and ensure equal access to justice for all

Indicator: 16.3.3 - Proportion of population who are refugees by country of origin

Concepts and definitions

Definition:

The indicator is defined as the total count of population who have been recognized as refugees divided by the total population of their country of origin, expressed per 100,000 population.

Refugees refers to persons recognized by the Government and/or UNHCR, or those in a refugee-like situation.

Population refers to total resident population in a given country in a given year.

Rationale:

SDG 16 claims to seek to reduce “the horrors which are a results of armed conflict or other forms of violence within societies”, however there are no indicators monitoring the number of populations being forcibly displaced outside their country of origin at a global level. The United Nations General Assembly Resolution (A/Res/70/1) that adopted the 2030 Agenda for Sustainable Development at paragraph 23 recognizes the relevance of the Agenda to meet the needs of refugees, internally displaced persons and migrants on the basis that they are among the most vulnerable. It also explicitly states that Member States resolve to take further effective measures and actions, to “*strengthen support and meet the special needs of people living in areas affected by complex humanitarian emergencies*”.

Concepts:

Refugees recognized by the Government and/or UNHCR include:

- (a) persons recognized as refugees by Governments having ratified the 1951 *United Nations Convention Relating to the Status of Refugees*, and/or its 1967 *Protocol*;
- (b) persons recognized as refugees under the 1969 *Organization of African Unity (OAU) Convention Governing the Specific Aspects of Refugee Problems in Africa*;
- (c) those recognized in accordance with the principles enshrined in the *Cartagena Declaration*;

(d) persons recognized by UNHCR as refugees in accordance with its Statute (otherwise referred to as “mandate” refugees);

(e) those who have been granted a complementary form of protection (i.e. non-Convention);

(f) persons who have been granted temporary protection on a group basis;

Persons in a *refugee-like situation* refer to those outside their territory of origin who face protection risks similar to those of refugees, but who, for practical or other reasons, have not been formally recognized or issued documentation to that effect.

Comments and limitations:

The estimates of the refugee population by country of origin are collected on an annual basis by UNHCR during its annual statistical review. Data is therefore already available and would not impose an additional burden on national statistical systems

Methodology

Computation Method:

$$[\text{Number of refugees by country of origin at end-year}/(\text{End-year population in country of origin} + \text{number of refugees by country of origin at end-year})] * 100,000$$

The indicator will be presented as the number of refugees per 100,000 population in country of origin.

Disaggregation:

Recommended disaggregation for this indicator are:

- sex
- age (esp. % children)
- geographical location (urban/rural)
- place of residence (in camps/out of camps)

Treatment of missing values:

- [At country level](#)

UNHCR produces estimates for countries where national data are not available from neither administrative systems nor from refugee registration.

- [At regional and global levels](#)

The regional average is applied to those countries within the region with missing values for the purposes of calculating regional aggregates only, but are not published as country-level estimates.

Regional aggregates:

Global and regional estimates are calculated as weighted averages of national data, with weights provided by the national resident population of the country of origin augmented by the number of refugees pertaining to that country.

Sources of discrepancies:

UNHCR makes all efforts to obtain data reported directly by member states to include in its statistical reports. The gradual implementation of IRRS (see below) by countries should improve quality and consistency of national and international data.

Methods and guidance available to countries for the compilation of the data at the national level:

- UNHCR Annual Statistical Report methodological guidance note.
- The Expert Group on Refugee and IDP Statistics, in which UNHCR belongs to the steering committee, has released the *International Recommendations on Refugee Statistics (IRRS)*, which were adopted by the United Nations Statistical Commission during its 2018 session and is a strong reference for refugee statistics reporting methodologies. UNHCR supports NSOs to build capacity to report on forced displacement in countries that currently lack disaggregated data on refugees.

Quality assurance

- A number of validation rules are included in the global database, so that data containing errors will not be accepted. All data submitted by countries are additionally verified for consistency by the UNHCR Statistical Unit. This includes checks with previous years' data, and among data reported by different countries. When inconsistencies exist, for instance when refugee returns reported by a country differ from the arrivals reported by another, the difference is taken back to the countries until the difference is resolved.

Data Sources

Description:

Two main sources exist at country level: a) administrative asylum systems; b) direct refugee registration databases. In cases where UNHCR performs refugee registration directly, operations provide data which is available with a highest degree of disaggregation. In cases where refugees go through a Refugee Status Determination (RSD) administrative procedure, data is collected by Governments in the biannual Population Statistics Review exercise facilitated by focal points in UNHCR country offices. Population data are derived from annual estimates produced by the UN Population Division.

Collection process:

At the international level, data on refugee populations are routinely collected by UNHCR through the biannual Population Statistics Review (PSR) data collection. Focal points in each UNHCR operation submit data to the Statistics Unit in the Field Information and Coordination Support Section that performs consistency checks. In most cases these focal points obtain data either from the UNHCR registration

database (in countries where UNHCR performs registration directly), or from national institutions responsible for data production in the area of asylum and refugee matters (National Statistical Offices, Ministry of Interior, Ministry of Justice, Administrative Tribunals). When a country does not report refugee figures to UNHCR, estimations based on positive decisions on asylum applications from previous years are used. Once consolidated, data are shared to countries to check their accuracy. Data for SDG monitoring will also be sent to countries for consultation before publication.

Data Availability

Description:

National data on refugee populations are available for 192 countries (at least one data point between 1951-2018). Time series data on refugees suitable for monitoring are available for 192 countries. Approximately 62 per cent of the refugee population have data which can be disaggregated by sex and 56 per cent which can be disaggregated by age.

Time series:

1951-2018

Calendar

Data collection:

III quarter 2019

I quarter 2020

Data release:

Fourth quarter 2019 (data for mid-year 2019).

Second quarter 2020 (data for end-year 2019)

Data providers

Refugee data are sent to UNHCR by member states, usually through national institutions responsible for data production in the area of refugee and asylum (National Statistical Offices, Ministry of Interior, Ministry of Justice, and Administrative Tribunals). Data obtained by UNHCR registration systems is provided directly by UNHCR country operations.

Data compilers

United Nations High Commissioner for refugees (UNHCR)
