Work Plans for Tier III Indicators

(as of 11 November 2016)

Compiled by UNSD through an online questionnaire sent to international and regional entities responsible for global data compilation
Introduction

This document contains a compilation of the work plans for global SDG indicators categorised as Tier III. These work plans were collected via an online consultation that was initiated at the request of the Inter-agency and Expert Group on Sustainable Development Goal Indicators (IAEG-SDGs) with those international agencies, entities, funds and programmes that are responsible for the methodological development and global compilation of data for these indicators.

This compilation includes all work plans that were submitted during the online consultation. However, the work plans for some Tier III indicators are missing as some remain without a custodian agency while for others, a work plan has yet to be submitted by the custodian agency. A complete list of the Tier III indicators for which no work plan was received can be found in the Annex.

This compilation of work plans is a living document and represents an initial, concise version of the work plans that will be reviewed by the IAEG-SDGs and eventually discussed during the 4th meeting of the IAEG-SDGs in Addis Ababa, Ethiopia. As the IAEG-SDGs reviews these work plans, they may request additional or clarifying information for some indicators. When a work plan for a Tier III indicator is updated, this compilation will also be updated and the compilation will serve as part of a background document to be submitted at the 48th session of the United Nations Statistical Commission in March 2017.

For any questions regarding these work plans please contact Benjamin Rae (raeb@un.org).
Table of Contents

Goal 1: End poverty in all its forms everywhere............................................ 1
   Includes indicators: 1.4.2, 1.5.1, 1.5.2 and 1.5.3

Goal 2: End hunger, achieve food security and improved
nutrition and promote sustainable agriculture ....................................... 14
   Includes indicators: 2.3.1, 2.3.2, 2.4.1 and 2.5.1

Goal 3: Ensure healthy lives and promote well-being for all at all ages .............................................................. 24
   Includes indicators: 3.5.1, 3.8.1, 3.8.2 and 3.8.3

Goal 4: Ensure inclusive and equitable quality education and
promote lifelong learning opportunities for all .................................... 42
   Includes indicator: 4.1.1, 4.2.1 and 4.7.1

Goal 5: Achieve gender equality and empower all women and
   girls ........................................................................................................ 50
   Includes indicators: 5.1.1, 5.5.1, 5.6.2, 5.a.1 and 5.c.1

Goal 6: Ensure availability and sustainable management of water
   and sanitation for all ........................................................................... 62
   Includes indicators: 6.3.1, 6.3.2, 6.4.1, 6.5.2 and 6.6.1

Goal 7: Ensure access to affordable, reliable, sustainable and
   modern energy for all ........................................................................... 76
   Includes indicator: 7.b.1

Goal 8: Promote sustained, inclusive and sustainable economic
growth, full and productive employment and decent work for all
.............................................................................................................. 77
   Includes indicator: 8.4.1

Goal 9: Build resilient infrastructure, promote inclusive and
   sustainable industrialization and foster innovation .......................... 80
   Includes indicators: 9.1.1, 9.3.1 and 9.3.2

Goal 10: Reduce inequality within and among countries ............. 85
   Includes indicators: 10.2.1, 10.3.1, 10.5.1, 10.7.1, 10.7.2 and 10.c.1

Goal 11: Make cities and human settlements inclusive, safe,
   resilient and sustainable .................................................................. 102
Goal 12: Ensure sustainable consumption and production patterns

Goal 13: Take urgent action to combat climate change and its impacts

Goal 14: Conserve and sustainable use the oceans, seas and marine resources for sustainable development

Goal 15: Protect, restore and promote sustainable use of terrestrial ecosystems, sustainably manage forests, combat desertification, and halt and reverse land degradation and halt biodiversity loss

Goal 16: Promote peaceful and inclusive societies for sustainable development, provide access to justice for all and build effective, accountable and inclusive institutions at all levels

Goal 17: Strengthen the means of implementation and revitalize the Global Partnership for Sustainable Development

Annex: Missing Tier III Indicator Work plans
**Goal 1: End poverty in all its forms everywhere**

**Goal 1**

**Target number:** 1.4

**Indicator Number and Name:** 1.4.2 Proportion of total adult population with secure tenure rights to land, with legally recognized documentation and who perceive their rights to land as secure, by sex and by type of tenure.

**Agency:** UN Habitat and World Bank

**Has work for the development of this indicator begun?** Yes

**Who are the entities, including national and international experts, directly involved and consulted in developing the methodology/and or data collection tools?**

"Methodological Development indicator (including data collection tools) : UN Habitat (Eduardo Moreno, Robert Ndugwa, Oumar Sylla); World Bank (Klaus Deininger, Gero Carletto, Thea Hilhorst), Jennifer Witril (Millennium Challenge Account land impact evaluation expert); regional representatives national statistical agencies (Africa, Asia, LAC, ECA).

Options for synergies with indicator 5.1a (FAO) and urban (tenure) informality (11 UN Habitat) – will be taken into account.

Consultation: The stakeholders supporting the adoption of this indicator will be consulted on the methodology and data collection. They will play a key role also in ensuring use of findings in country, continental and global level policy dialogue. Additional organizations and networks engaged in consultations are Global Donor working Group on Land (bilateral and multilateral donors like USAID, BMZ, Netherlands, DfID, JICA, IFAD), Global Land Indicators Initiative – Global Land Tool Network (GLII/GLTN – about 70 CSO, NGO, professional organization, research and training organizations (IASS), bilateral and multilateral organizations working on land, ) , International Land Coalition (ILC – network of CSO, NGO and international organizations working on land), UNEP, and Gallup. In addition, several more specific data collection initiatives are set up by networks and organization in their member countries, categories of people (like indigenous peoples, gender); tenure types (commons/ group rights like land mark, Africa commons index) or issues (forests - RRI, slums, perceptions). The findings will contribute to enriching policy analysis. Through the consultation process, options for standardization in data collection approaches will be encouraged to facilitate comparative analysis and will even contribute to progress son the indicator (tenure regularization in slums; recording of indigenous people rights; gender rights). .

Stakeholders’ consultation takes place via virtual meetings, reference groups and expert group meetings. "

**What is the involvement of or how do you plan to involve National Statistical Systems in the development of the methodology?**

National statistical systems are the main source of data for this indicator. Each national (or regional body like UEOMA) will be consulted on including a limited set of standardized questions (legally recognized documentation and perceived tenure security) in already established, nationally representative multi topic household surveys. Representatives of national statistical systems will be consulted on the methodology.

**Please briefly describe the process of developing the methodology for the indicator**
Goal 1: End poverty in all its forms everywhere

"The methodology design work plan will be submitted end of July and lay out the steps for developing, testing and peer reviewing, and capacity building required. Methodology development will already include data collection (administrative data from registries and cadasters; available survey data) to test options for computing and their robustness for different country settings.

Security of Tenure methodology is now developed for Household surveys, and has been piloted in selected countries in the developing regions (LSMS – ISA / 8 countries).

Technical and practical feasibility of the methods proposed for data collection and analysis will include an assessment of how the indicators work in practice (and can be combined with other analytical work), deliver the necessary combinations of quantitative and qualitative information to support understanding and allow the degrees of disaggregation required (methodological feasibility). These results will determine the need for any additional piloting to ensure methodologies and procedures for gathering samples or comprehensive data are sufficiently rigorous and detailed and that statistical methods for data analysis and computation of indicator values over time are sound, consistent and reliable so as to produce significant results in all regions prior to roll out globally."

Please indicate new international standards that will need to be proposed and approved by an intergovernmental process (such as UNSC) for this methodology.

The methodology will be subject to rigorous peer review and published, before being submitted for review to the IAEG – SDG for graduation to tier 1; No international standards will need to be developed for this indicator; international agreement on substance will be achieved through the consultation mechanism already in place and that helped propose this indicator, that engage the main stakeholders and networks working on land globally.

When do you expect the methodological work on this indicator to be completed?

The methodological work for this indicator is scheduled for completion in 12 months (October 2017) following approval of approach by IAG-SDG

Are data and metadata already being collected from the National Statistical System for one or more components of this indicator?

Yes

If yes, please describe:

The World Bank and UN Habitat have an archive of household surveys and census produced by national statistical systems. These data sets are analysed for variables of relevance for this indicators and will be used for developing and testing possible computing formula(s) and disaggregation for the indicator and developing meta data (by country for land type). For all upcoming LSMS surveys, the addition or expansion of land questions (in line with indicator 1.4.2) is already taking place as these surveys only take place every 3-5 years. Examples include Ghana, Malawi, Uganda and Zimbabwe, but also UEOMA standard survey). This indicator also uses administrative data produced by cadasters and registries. Collection of data on the number of plots that are mapped and registered in official government systems, total area covered and gender disaggregation has also started and a respondent list for these agencies is being built. The results will also be used for country level meta data (structure of the land information system).

How do you plan to collect the data?

Send questionnaire(s) to country, Obtain data directly from country database/website, Joint survey/compilation with national agency and international entity, Satellite images, remote sensing
Goal 1: End poverty in all its forms everywhere

If the indicator involves multiple components from different data sources, please describe how each individual component of the indicator will be collected here.

- Security of land tenure is a multi-dimensional entity. Due to the different denominators, different tools for measurement and monitoring have to be used. Efficiency of data collection and reducing the burden for national statistical systems and reporting agencies is a key criteria.
- Questions will be added to upcoming national surveys (or census) that are already planned and funded, and integrated and adapted into the existing survey structure, in a way that elicits consistent data across different countries.
- To assist countries, a set of guidelines will be developed and discussed with the national statistical systems. Technical assistance will be made available (possibly through the Rome Data hub (established by FAO, IFAD and World Bank) and Habitat to national statistical systems to support the integration of these questions in existing surveys, enumerator training and facilitate analysis.
- Possibilities for expanding questions in standardized and nationally representative surveys like the DHS will be explored and discussed, which will be important for countries where the survey frequency is relatively low. Questions on land and housing ownership are already included in the DHS since 2015 and options for more granularity will be discussed.
- Options for expanding land related questions in any upcoming census will also be explored.
- Administrative data will be derived from national land information systems (cadasters and registries), but the completeness and quality will vary across countries, reason why meta data are important. The quality of administrative is expected to improve in the period up to 2030, (which would imply a larger percentage of the adult population having legally documented rights) and will already be high in for example most OECD countries.
- Responsibility for administrative data collection will be with national line ministries or land registries, with methodological support provided through international organizations and regional bodies (e.g. UN-WPLA) to facilitate experience sharing and consistency across countries. Responsibility for household surveys will be with national statistical offices.

With what frequency is data expected to be collected?

Data collection for administrative data will be on an annual basis; Survey data will be available on an annual basis in more developed countries, but frequency will be 3-5 years in several developing countries. Phasing in land questions in all relevant surveys globally will take a few years and requires interest of member states. This frequency will be assessed during methodology development in relation an expected (measurable) change on an annual basis in most countries. Annual reporting is the aim as this is important also for sustaining policy dialogue at the country level. As already indicated, UN Habitat and World Bank will work closely with country and regional statistical agencies and global partners; provide capacity development support for country data collection, analysis and reporting. This work will be supported by the Global Donor Working Group on Land, and other partners collaborating in the GLII platform like for capacity strengthening at regional and country level for data providers and reporting mechanisms; and promoting understanding of this indicator at all levels.

Is there a process of data validation by countries in place or planned for this indicator?

Yes

If yes, please briefly describe:

"UN Habitat and World Bank will facilitate a multi-stakeholder Expert Group Meetings for review and build consensus on methodology and tools for data collection. The publication of the methodology will be subject to a standard peer review.

The aim is that all data used for computing this indicator will be submitted by the national system, like line agencies (registries/ cadasters) and national statistical agencies. In those countries where land
Goal 1: End poverty in all its forms everywhere

tenure security is of greater concern, national policy dialogues will be organized with support of the networks supporting this indicator and its measurements. Local organizations can use these events to submit additional data and information to enrich the analysis and assessment of progress."
Goal 1: End poverty in all its forms everywhere

Target number: 1.5

Indicator Number and Name: "1.5.1 Number of deaths, missing persons and persons affected by disaster per 100,000 people"

Agency: UNISDR

Has work for the development of this indicator begun? Yes

Who are the entities, including national and international experts, directly involved and consulted in developing the methodology and or data collection tools?

"Open-ended intergovernmental expert working group on indicators and terminology (OEIWG) [A/RES/69/284], comprising experts nominated by States, UN agencies and relevant stakeholders, has proposed possible indicators to measure global progress in the implementation of the Sendai Framework. The work of the OEIWG shall be completed by December 2016 and its report submitted to the General Assembly for consideration. UNISDR, as the Secretariat for the OEIWG, supports deliberation of Member States by producing technical notes addressing critical issues, including feasibility, computation methodology, data availability etc. UNISDR Scientific and Technical Advisory Group (STAG) has provided the OEIWG with technical recommendations. (Member List: https://www.unisdr.org/files/workspace/7935_stagmembers.pdf)"

What is the involvement of or how do you plan to involve National Statistical Systems in the development of the methodology?

"In most countries national disaster loss databases are established and managed by special purpose agencies including national disaster agencies, civil protection agencies, and meteorological agencies, and disaster data is collected by line ministries. Therefore, it is essential for national statistical offices (NSOs) to closely collaborate with such agencies and line ministries in charge of targeted data."

Please briefly describe the process of developing the methodology for the indicator

"The proposed indicators were reviewed and examined by other UN agencies and submitted to the IAEG process in early-July 2015. Then in late-July 2015, those indicators were again reviewed by the Expert Group Meeting, organized by UNISDR consisting of more than 60 experts from UN system, scientific and academic organizations, civil sector and private sector and submitted and examined by the Member States in the OEIWG. So far two sessions of the OEIWG were held, in September 2015 and February 2016, where Member States were deliberating proposed indicators and terminology. Additional consultation was done in June 2016, and is planned for convergence in the work in advance of the third session of the OEIWG in November 2016. UNISDR, as a secretariat for the OEIWG, has supported deliberation of Member States in collaboration with other UN agencies and academia. Related information and documents can be found on the web: http://www.preventionweb.net/drr-framework/open-ended-working-group/"

Please indicate new international standards that will need to be proposed and approved by an intergovernmental process (such as UNSC) for this methodology.

"As the Sendai Framework stipulates, any scales and types of disasters should be addressed. The methodology proposes the collection and use of simple and uniform physical indicators of mortality (number of people) as the point of departure for computation."
Goal 1: End poverty in all its forms everywhere

Time dimension should be defined when to record/report data. Methodologies and standards as well as data for “number of deaths” are very solid and robust. The number of “missing persons” is subject to legal procedures and time threshold, thus it is not consistently collected among Member States. The number of “persons affected” has same problems as those of “missing persons” but with more complexity. The definition of “persons affected” has not been universal and still under development. The OEIWG is currently discussing sub-categories of “persons affected” taking into account rationality and feasibility. Nevertheless double-counting is unavoidable in many countries and the value is a proxy, it would provide global trends and measure global progress."

When do you expect the methodological work on this indicator to be completed?

The OEIWG will complete discussion by December 2016

Are data and metadata already being collected from the National Statistical System for one or more components of this indicator?

No

If the answer is 'No', when do you expect work to begin on developing a methodology and with which partners will your organisation work?

"The OEIWG is currently developing indicators to measure global progress in the implementation of the Sendai Framework, which will eventually be SDG indicators. We closely work with Members of the OEIWG, with which we expect NSO must have synergies and shared responsibilities to collect data."

How do you plan to collect the data?

In the past countries voluntarily provided UNISDR with data and information via online-based. We have established a comparable national disaster loss database, DesInventar (http://www.desinventar.net/index_www.html). Although the current coverage exceeds 89 countries, it is expected that by 2020 all countries will build/adjust national disaster loss databases according to the recommendations and guidelines of the OEIWG. We are planning to upgrade national disaster loss database with data collection tools using the latest technologies (cloud based, API) for disaster damage data at local level, which requires quality control and technical support for across all levels of governments. Ideally the system should use a single entity for the UN system, that can serve multiple purposes and can be used by across UN agencies.

If the indicator involves multiple components from different data sources, please describe how each individual component of the indicator will be collected here.

The national government in each country takes primary responsibility in data collection and reporting in collaboration within and across levels of governments.

With what frequency is data expected to be collected?

Ideally hazard-by-hazard basis, at least annually

Is there a process of data validation by countries in place or planned for this indicator?

Yes
Goal 1: End poverty in all its forms everywhere

If yes, please briefly describe:

Each country takes primary responsibility in his data validation. UNISDR acts as a “clearing house” in charge of technical support, quality control, data aggregation, analysis of trends and patterns, and measurement of progress/reporting.

If you have any additional comments that you believe would be helpful to IAEG-SDG members in analysing the work plan and methodological development of the indicator, please provide them here:

"The proposed methodology and collection is currently under deliberation in the OEIWG. This proposal is mainly based on UNISDR analysis, experience, and knowledge built in the period under the Hyogo Framework for Action (2005-2015).

Not every country has a comparable national disaster loss database that is consistent with the proposed guidelines (although current coverage exceeds 89 countries). Therefore, by 2020, it is expected that all countries will build/adjust national disaster loss databases according to the recommendations and guidelines of the OEIWG."
Goal 1: End poverty in all its forms everywhere

Target number: 1.5

Indicator Number and Name: "1.5.2 Direct disaster economic loss in relation to global GDP"

Agency: UNISDR

Has work for the development of this indicator begun? Yes

Who are the entities, including national and international experts, directly involved and consulted in developing the methodology/and or data collection tools?

"Open-ended intergovernmental expert working group on indicators and terminology (OEWG) [A/RES/69/284], comprising experts nominated by States, UN agencies and relevant stakeholders, has proposed possible indicators to measure global progress in the implementation of the Sendai Framework. The work of the OEWG shall be completed by December 2016 and its report submitted to the General Assembly for consideration. UNISDR, as the Secretariat for the OEWG, supports deliberation of Member States by producing technical notes addressing critical issues, including feasibility, computation methodology, data availability etc. UNISDR Scientific and Technical Advisory Group (STAG) has provided the OEWG with technical recommendations. (Member List: https://www.unisdr.org/files/workspace/7935_stagmembers.pdf)"

What is the involvement of or how do you plan to involve National Statistical Systems in the development of the methodology?

"In most countries national disaster loss databases are established and managed by special purpose agencies including national disaster agencies, civil protection agencies, and meteorological agencies, and disaster data is collected by line ministries. Therefore, it is essential for national statistical offices (NSOs) to closely collaborate with such agencies and line ministries in charge of targeted data."

Please briefly describe the process of developing the methodology for the indicator

"The proposed indicators were reviewed and examined by other UN agencies and submitted to the IAEG process in early-July 2015. Then in late-July 2015, those indicators were again reviewed by the Expert Group Meeting, organized by UNISDR consisting of more than 60 experts from UN system, scientific and academic organizations, civil sector and private sector and submitted and examined by the Member States in the OEWG. Please indicate new international standards that will need to be proposed and approved by an intergovernmental process (such as UNSC) for this methodology.

"As the Sendai Framework stipulates, any scales and types of disasters should be addressed. The methodology proposes, whenever possible, the collection and use of simple and uniform physical indicators of damage (counts of assets affected) as the starting point for calculations, instead of requesting countries to directly evaluate the economic value of direct losses. A centralized and
Goal 1: End poverty in all its forms everywhere

common approach to estimate direct economic losses will result in a homogeneous and consistent indicator. Time dimension should be defined when to record/report data. The OEIWG is currently discussing sub-categories of “direct disaster economic loss” taking into account rationality and feasibility among Member States. Although there are great variation in physical and economical situations and data availability among Member States, the value would provide global trends and measure global progress.

When do you expect the methodological work on this indicator to be completed?

The OEIWG will complete discussion by December 2016

Are data and metadata already being collected from the National Statistical System for one or more components of this indicator?

No

If the answer is 'No', when do you expect work to begin on developing a methodology and with which partners will your organisation work?

"The OEIWG is currently developing indicators to measure global progress in the implementation of the Sendai Framework, which will eventually be SDG indicators. We closely work with Members of the OEIWG, with which we expect NSO must have synergies and shared responsibilities to collect data."

How do you plan to collect the data?

Related information and documents can be found on the web: http://www.preventionweb.net/drr-framework/open-ended-working-group/"

Please indicate new international standards that will need to be proposed and approved by an intergovernmental process (such as UNSC) for this methodology.

"As the Sendai Framework stipulates, any scales and types of disasters should be addressed."
Goal 1: End poverty in all its forms everywhere

The quantitative indicators should measure quality, introducing increment measurements for achievement judged by necessary criteria stipulated in the Sendai Framework.

More information can be found in the document prepared for the Second Inter-Sessional Informal consultations of the Chair (20-21 June 2016):
http://www.preventionweb.net/documents/oiewg/Technical%20Collection%20of%20Concept%20Notes.pdf

When do you expect the methodological work on this indicator to be completed?

The OEIWG will complete discussion by December 2016

Are data and metadata already being collected from the National Statistical System for one or more components of this indicator?

No

If the answer is 'No', when do you expect work to begin on developing a methodology and with which partners will your organisation work?

"The OEIWG is currently developing indicators to measure global progress in the implementation of the Sendai Framework, which will eventually be SDG indicators. We closely work with Members of the OEIWG, with which we expect NSO must have synergies and shared responsibilities to collect data."

How do you plan to collect the data?

In the past countries voluntarily provided UNISDR with data and information via online-based. We have established a comparable national disaster loss database, DesInventar (http://www.desinventar.net/index_www.html). Although the current coverage exceeds 89 countries, it is expected that by 2020 all countries will build/adjust national disaster loss databases according to the recommendations and guidelines of the OEIWG. We are planning to upgrade national disaster loss database with data collection tools using the latest technologies (cloud based, API) for disaster damage data at local level, which requires quality control and technical support for across all levels of governments. Ideally the system should use a single entity for the UN system, that can serve multiple purposes and can be used by across UN agencies.

With what frequency is data expected to be collected?

Information on DRR strategies were collected from the biennial monitoring of progress in the Hyogo Framework for Action through the multi-stakeholder review (ended in 2015). The primary purpose of the tool is to assist countries to monitor and review their progress and challenges in the implementation of disaster risk reduction. A new online Sendai Framework Monitor will begin in 2017 and the first cycle of the biennial monitoring will be in 2017-2018. The Sendai Framework monitoring will be synchronized with SDG monitoring at the national level, to strengthen coherence and facilitate coordinated submission to ECOSOC and the UN General Assembly.

Is there a process of data validation by countries in place or planned for this indicator?

Yes
Goal 1: End poverty in all its forms everywhere

If yes, please briefly describe:

Each country takes primary responsibility in his data validation. UNISDR acts as a “clearing house” in charge of technical support, quality control, data aggregation, analysis of trends and patterns, and measurement of progress/reporting.

If you have any additional comments that you believe would be helpful to IAEG-SDG members in analysing the work plan and methodological development of the indicator, please provide them here:

"The proposed methodology and collection is currently under deliberation in the OEIWG. This proposal is mainly based on UNISDR analysis, experience, and knowledge built in the period under the Hyogo Framework for Action (2005-2015).

Reporting of the Hyogo Framework for Action (HFA) Monitor and the succeeding Sendai Monitor under development is only global database collecting DRR policy information, despite non-mandatory basis. 140+ countries undertook at least one cycle of self-assessment of progress in implementing the HFA during the period 2005-2015. (60 countries at start in 2007)."
Goal 2: End hunger, achieve food security and improved nutrition and promote sustainable agriculture

Goal 2

Target number: 2.3

Indicator Number and Name: 2.3.1 Volume of production per labour unit by classes of farming/pastoral/forestry enterprise size

Agency: FAO

Has work for the development of this indicator begun? Yes

Who are the entities, including national and international experts, directly involved and consulted in developing the methodology/and or data collection tools?

The FAO Statistics Division, the FAO Agricultural Development Economics Division, the Global Strategy on Agricultural Statistics, the World Bank, IFAD

What is the involvement of or how do you plan to involve National Statistical Systems in the development of the methodology?

Member countries will be consulted through the Inter-Agency and Expert Group (IAEG) on Sustainable Development Goal Indicators. A methodological proposal will be submitted to the IAEG before the end of 2016, to gather comments and reactions from member countries in the spring of 2017.

Please briefly describe the process of developing the methodology for the indicator

"The FAO Statistics Division will promote an expert consultation, in collaboration with the FAO Agricultural Development Economics Division, the Global Strategy to Improve Agricultural and Rural Statistics, the World Bank Living Standard Measurement team and IFAD. The consultation will host representatives of member countries, independent scholars and possibly representatives of the private sector and the civil society. The consultation will primarily discuss and identify harmonized definitions of smallholder food producers, productivity and income. It will also discuss the computation of related indicators, such as access to land, financial services, education and social protection.

Data collection will refer to the adoption of the approach proposed by the FAO AGRIS project. This entails the establishment of an integrated set of enterprise-based data collection exercises in agriculture. Core indicators – such as production – are collected on an annual basis, while other indicators are collected less frequently through consistent sampling. For data at the household level, emphasis will be placed on the World Bank Living Standard Measurement System, particularly the Integrated Surveys of Agriculture.

The expert consultation will take place in the fall of 2016.

As a second step, based on the results of the expert consultation, FAO will take the lead on drafting a proposal in collaboration with key partners on identifying classes of farming, pastoral and forestry enterprise sizes, and measuring their productivity and income. The proposal will be submitted to the IAEG before the end of 2016, in view of a gathering comments and opinions from member countries in the spring of 2017. One likely opportunity will be the annual meeting of the UN Statistical Commission."

Please indicate new international standards that will need to be proposed and approved by an intergovernmental process (such as UNSC) for this methodology.

"International harmonized definitions are required for:
Goal 2: End hunger, achieve food security and improved nutrition and promote sustainable agriculture

2. Smallholder food producers
3. Income
4. Productivity"

When do you expect the methodological work on this indicator to be completed?

Mid-2017

Are data and metadata already being collected from the National Statistical System for one or more components of this indicator?

Yes

If yes, please describe:

Micro data required for measuring productivity and income of food producers by enterprise size are currently being collected in several countries through household budget surveys. These are being used on an experimental basis by the FAO Statistics Division to compute indicators of rural livelihoods.

How do you plan to collect the data?

Obtain data directly from country database/website, The FAO AGRIS project

With what frequency is data expected to be collected?

It depends on the countries. Microdata from households budget surveys will likely be available from every year in the best case to approximately every 5 years in the worst cases. The FAO AGRIS project may provide more frequent data.

Is there a process of data validation by countries in place or planned for this indicator?

Yes

If yes, please briefly describe:

Results and methodologies will be shared with member countries. Capacity building exercises are planned to take place at regional and possibly at country level.
Goal 2: End hunger, achieve food security and improved nutrition and promote sustainable agriculture

Target number: 2.3

Indicator Number and Name: 2.3.2: Average income of small-scale food producers, by sex and indigenous status

Agency: FAO

Has work for the development of this indicator begun? Yes

Who are the entities, including national and international experts, directly involved and consulted in developing the methodology and/or data collection tools?

The FAO Statistics Division, the FAO Agricultural Development Economics Division, the Global Strategy on Agricultural Statistics, the World Bank, IFAD

What is the involvement of or how do you plan to involve National Statistical Systems in the development of the methodology?

Member countries will be consulted through the Inter-Agency and Expert Group (IAEG) on Sustainable Development Goal Indicators. A methodological proposal will be submitted to the IAEG before the end of 2016, to gather comments and reactions from member countries in the spring of 2017.

Please briefly describe the process of developing the methodology for the indicator

"The FAO Statistics Division will promote an expert consultation, in collaboration with the FAO Agricultural Development Economics Division, the Global Strategy to Improve Agricultural and Rural Statistics, the World Bank Living Standard Measurement team and IFAD. One likely opportunity will be the annual meeting of the UN Statistical Commission."

Please indicate new international standards that will need to be proposed and approved by an intergovernmental process (such as UNSC) for this methodology.

"International harmonized definitions are required for:

2. Smallholder food producers
3. Income"
Goal 2: End hunger, achieve food security and improved nutrition and promote sustainable agriculture

4. Productivity

When do you expect the methodological work on this indicator to be completed?

Mid-2017

Are data and metadata already being collected from the National Statistical System for one or more components of this indicator?

Yes

If yes, please describe:

Micro data required for measuring productivity and income of food producers by enterprise size are currently being collected in several countries through household budget surveys. These are being used on an experimental basis by the FAO Statistics Division to compute indicators of rural livelihoods.

How do you plan to collect the data?

Send questionnaire(s) to country, Obtain data directly from country database/website, The FAO AGRIS project

With what frequency is data expected to be collected?

It depends on the countries. Microdata from households budget surveys will likely be available from every year in the best case to approximately every 5 years in the worst cases. The FAO AGRIS project may provide more frequent data.

Is there a process of data validation by countries in place or planned for this indicator?

Yes

If yes, please briefly describe:

Results and methodologies will be shared with member countries. Capacity building exercises are planned to take place at regional and possibly at country level.
Goal 2: End hunger, achieve food security and improved nutrition and promote sustainable agriculture

Target number: 2.4

Indicator Number and Name: 2.4.1 Proportion of agricultural area under sustainable and productive agriculture

Agency: FAO

Has work for the development of this indicator begun? Yes

Who are the entities, including national and international experts, directly involved and consulted in developing the methodology and or data collection tools?

"Currently FAO is developing the methodology with the involvement/input of experts – both statistical and technical – from within the organization. This includes experts in agricultural production, natural resources (biodiversity, land and water), socio-economics, and statistics. A next step will be to involve international stakeholders – including other international organizations, countries, civil society and the private sector – in further shaping the methodology. This discussion will commence at an expert meeting in Rome, currently scheduled for October 2016. Before submitting the revised methodology to the IAEG-SDG by the end of the year, it will be peer reviewed by the Inter-Agency and Expert Group on Food Security, Agricultural and Rural Statistics (IAEG-AG), which is made up of country representatives from National Statistical services (NSSs) and international organizations, and has the mandate of guiding methodological developments and standards in agricultural statistics."

What is the involvement of or how do you plan to involve National Statistical Systems in the development of the methodology?

As stated above NSSs will be involved both in an expert meeting in October 2016 as well as in the final peer review before submitting the revised methodology to the IAEG-SDG by year-end. The methodology will also be piloted in selected countries. The NSSs will also be part of this process.

Please briefly describe the process of developing the methodology for the indicator

"The main principle behind the development of the indicator is to make all efforts so that the indicator reflects, as much as possible and without modifying it, the vision behind the formulation of indicator 2.4, which is of sustainable food production systems and resilient agriculture practices that increase productivity and production, help maintain ecosystems, strengthen capacity for adaptation to climate change and extreme weather, droughts, flooding, and other disasters, and that progressively improve land and soil quality.

The methodology for the development of indicator 2.4.1 benefits from a vast amount of methodological work on sustainable agriculture that has been conducted in the past. As a first stage, FAO is mapping and analyzing past and existing initiatives in relation to the monitoring of sustainable agriculture. In parallel, an architecture is being developed for the indicator that ensures that it captures the different dimensions of target 2.4. Experts are requested to propose key metrics to be used in measuring the different dimensions of the indicator. Data collection methods are being assessed in parallel in order to propose the best balance between cost and quality of information. Metrics and data collection methods are assessed in combination with the outcome of S.M.A.R.T. indicators.

Development of the indicator benefits from partnership with the Global Strategy to Improve Agricultural and Rural Statistics. This ensures that the methodological development is tightly linked to how the data will be collected at country level.

The architecture and metrics will be presented and discussed at an expert meeting, which will involve international organizations and internationally recognized experts in the field of sustainable agriculture. The revised methodology will be peer reviewed by the IAEG-AG and submitted to the
Goal 2: End hunger, achieve food security and improved nutrition and promote sustainable agriculture

IAEG-SDG. The methodology will be piloted in selected countries. Detailed guidelines will also be developed to help support countries in their monitoring and reporting.

Please indicate new international standards that will need to be proposed and approved by an intergovernmental process (such as UNSC) for this methodology.

This process will set an international standard/definition on how to measure sustainable agriculture and the methodology to do so.

When do you expect the methodological work on this indicator to be completed?

The majority of the methodological work will be completed by the end of 2016.

Are data and metadata already being collected from the National Statistical System for one or more components of this indicator?

Yes

If yes, please describe:

Data for this indicator will come from data that are already being collected from the National Statistical System. Two sources are being proposed in order to respond to what might be available in a country and based on its statistical capacity. The first is through administrative data, which is already collected through a National Statistical System. The second, which provides more granular information, will be through farm surveys (such as Agricultural Integrated Surveys, AGRIS) or similar instruments, and possibly supplemented through remote sensing.

How do you plan to collect the data?

Obtain data directly from country database/website, Joint survey/compilation with national agency and international entity, Satellite images, remote sensing

If the indicator involves multiple components from different data sources, please describe how each individual component of the indicator will be collected here.

Cost-effectiveness, simplicity and not excessively burdening countries guides the methodological work. Efforts will be made to combine different data sources in order to do so. In addition, efforts will be made to combine data collection with other SDG indicators to the extent possible.

With what frequency is data expected to be collected?

Frequency will depend on the source of data. For administrative information, data can be collected on a regular basis. For farm surveys, data will be collected according to systems that exist at country level.

Is there a process of data validation by countries in place or planned for this indicator?

Yes

If yes, please briefly describe:

Data will be validated at country level. As ‘custodian agency’ for this indicator, FAO will provide the technical support, both for data collection and for validation.
Goal 2: End hunger, achieve food security and improved nutrition and promote sustainable agriculture

If you have any additional comments that you believe would be helpful to IAEG-SDG members in analysing the work plan and methodological development of the indicator, please provide them here:

"The methodology will consider the need to capture information around several dimensions related to sustainable agriculture. The indicator will therefore be multi-dimensional, offering an objective and transparent way to combine metrics from the different dimensions into a single indicator. All efforts should be done at an early stage to seek synergies between indicators so as to propose harmonized approaches where possible and reduction in the cost of data collection."
**Goal 2: End hunger, achieve food security and improved nutrition and promote sustainable agriculture**

**Target number:** 2.5

**Indicator Number and Name:** 2.5.1 Number of plant and animal genetic resources for food and agriculture secured in either medium or long-term conservation facilities

**Agency:** FAO

**Has work for the development of this indicator begun?** Yes

**Who are the entities, including national and international experts, directly involved and consulted in developing the methodology and or data collection tools?**

"The Plant component of the indicator 2.5.1 above corresponds to the indicator 20. Number of accessions conserved ex situ under medium or long-term conditions adopted by the FAO Commission on Genetic Resources for Food and Agriculture at its 14th Regular Session held in Rome in April 2013 (see Annex C of CGRFA-14 Report). Data requirements are detailed in document CGRFA-15/15/Inf.9 Reporting Format for Monitoring the Implementation of the Second Global Plan of Action for Plant Genetic Resources for Food and Agriculture (see indicator 20; question 6.2) and are based on the FAO/Bioversity Multi-Crop Passport Descriptors (MCPD), a standard for PGRFA information exchange applied, inter alia, by 43 European countries (http://eurisco.ipk-gatersleben.de/apex/EURISCO_WEB.download_file?p_id=1), as well as by the USDA National Plant Germplasm System (NPGS) and the CGIAR genebanks (https://www.genesys-pgr.org/explore).

As per April 2016, 71 countries have already either reported directly to FAO or published downloadable datasets complying with the required standards for the elaboration of the plant component of indicator 2.5.1.

Data reporting at country level is coordinated by the officially appointed National Focal Point for Plant Genetic Resources for Food and Agriculture (http://www.fao.org/wiews/en/).

As per the Animal Genetic Resources for Food and Agriculture FAO would count the number of local breeds stored within a genebank collection with an amount of genetic material stored which is required to reconstitute the breed (based on the Guidelines on Cryconservation of animal genetic resources, FAO, 2012, accessible at http://www.fao.org/docrep/016/i3017e/i3017e00.htm). The guidelines have been endorsed by the Commission on Genetic Resources for Food and Agriculture at its 13th regular session (http://www.fao.org/docrep/meeting/024/mc192e.pdf).

For the animal element the Domestic Animal Diversity Information System DAD-IS (http://dad.fao.org/) could be amended to collect the required information on regular base. National Coordinators for Management of Animal Genetic Resources, nominated by their respective government, provide data to DAD-IS."

**What is the involvement of or how do you plan to involve National Statistical Systems in the development of the methodology?**

The methodology for both components is already elaborated and as described above applied. Internal arrangements for the periodic reporting should be defined individually by countries between the national genebank holding the information and the National Statistical Office.

**Please briefly describe the process of developing the methodology for the indicator**
Goal 2: End hunger, achieve food security and improved nutrition and promote sustainable agriculture

"The methodology for the development of the plant component of the indicator was elaborated taking into consideration, in particular, the availability and accessibility of data required as well as the importance of maintaining continuity in reporting through a country-led and participatory process. In 2012 FAO, including the Secretariats of the Commission on Genetic Resources for Food and Agriculture and of the International Treaty on Plant Genetic Resources for Food and Agriculture, with the collaboration of the Global Crop Diversity Trust, the CGIAR, as well as national experts, revised existing indicators for plant genetic resources for food and agriculture and proposed a set of indicators, among these indicator 20. Number of accessions conserved ex situ under medium or long-term conditions, to the FAO Commission on Genetic Resources for Food and Agriculture. The Commission adopted the indicators and agreed on a Reporting Format that details data requirement for the elaboration of the indicator (see 6.2.1 above).

The methodology for the animal component is already elaborated as described above."

Are data and metadata already being collected from the National Statistical System for one or more components of this indicator?

Yes

If yes, please describe:

"As per April 2016, 71 countries have already either reported directly to FAO or published downloadable datasets complying with the required standards for the elaboration of the plant component of indicator 2.5.1.

Data for genebank/cryobank collections for animal breeds have been collected during the process of data collection for The Second Report on the State of the World's Animal Genetic Resources for Food and Agriculture (see http://www.fao.org/AG/AGAInfo/programmes/en/genetics/Second_state.html). The information is provided in the counties' official reports from the year 2013 (see http://www.fao.org/AG/AGAInfo/programmes/en/genetics/national_report.html). Therefore the baseline for the indicator is established and corresponds to the number of breeds for which sufficient material is stored in cryobanks, based on the 78 country reports yielding an answer on the respective question.

To collect data on a regular basis, the Domestic Animal Diversity Information System DAD-IS will be adjusted accordingly."

How do you plan to collect the data?

Send questionnaire(s) to country, Obtain data directly from country database/website, Joint survey/compilation with national agency and international entity

If the indicator involves multiple components from different data sources, please describe how each individual component of the indicator will be collected here.

"PLANT: Countries can report directly to FAO through http://www.fao.org/pgrfa/. Alternatively they can publish on the web downloadable dataset using standards that meet the indicator requirements (e.g. EURISCO; USDA NPGS; CGIAR through Genesys).

ANIMAL: Countries can report directly to FAO through http://dad.fao.org/.

With what frequency is data expected to be collected?

biannually
Goal 2: End hunger, achieve food security and improved nutrition and promote sustainable agriculture

Is there a process of data validation by countries in place or planned for this indicator?

Yes

If yes, please briefly describe:

Data validation is the responsibility of the national genebank.

If you have any additional comments that you believe would be helpful to IAEG-SDG members in analysing the work plan and methodological development of the indicator, please provide them here:

"FAO suggests that this indicator be upgraded to Tier II (methodology established - data coverage less than 50% of countries). The reason for the initial Tier III categorization was not the lack of methodology but the uncertainty on how to report on an indicator composed of two distinct components. It should be recalled that early in the process, FAO had proposed only the plant component, but that after the 2nd IAEG-SDG, members had requested that the indicator cover both plants and animals.

In line with what was agreed for various similar other indicators at the 3rd IAEG-SDG, i.e. that a 'dashboard' approach should be used for indicators consisting of more than one component, rather than creating aggregate indices, it is proposed that 2.5.1 be similarly reported in its two components. In this way, it can be upgraded to Tier II. "

23
Goal 3: Ensure healthy lives and promote well-being for all at all ages

Goal 3

Target number: 3.5

Indicator Number and Name: 3.5.1 Coverage of treatment interventions (pharmacological, psychosocial and rehabilitation and aftercare services) for substance use disorders

Agency: UNODC and WHO

Has work for the development of this indicator begun?

Yes. In UNODC the work on this indicator builds upon methodological developments leading to annual data collection and reporting on treatment coverage for drug use disorders as mandated by the drug conventions and the Commission on Narcotic Drugs. In WHO, following recommendation of the WHO Technical Advisory Group on Alcohol and Drug Epidemiology (TAG-ADE), a working group on treatment coverage was established with a focus on alcohol use disorders and the WHO concept of Universal Health Coverage (UHC) as applied to substance use disorders. Discussions on methodology for coverage of treatment interventions for substance use disorders have already taken place at the meetings of the above-mentioned entities. The information collected and reported by UNODC and WHO on treatment coverage so far at global, regional and country levels (through the methodologies of annual surveys (using ARQ) undertaken by UNODC and periodic surveys undertaken by WHO in the framework of the WHO- ATLAS-SU project serve as an important contribution to the work on the development of this indicator. In order to ensure that all efforts undertaken by UNODC and WHO and other regional and international organizations are well coordinated and follow consistent approaches, the Inter Agency Technical Working Group on Drug Epidemiology (IATWG-DE) was established in August 2016 at the meeting of experts from the international agencies under the leadership of UNODC and WHO. The Group’s objectives include development of methodology for measuring and reporting on the SDG indicator at the national, regional and international levels.

Who are the entities, including national and international experts, directly involved and consulted in developing the methodology/and or data collection tools?

UNODC and WHO together will lead the development of the methodology for the indicator involving each their national constituencies in the phase of consultation and validation. Inter-agency consultations will happen through the IATWG-DE which includes UNODC and WHO as the lead and UNAIDS, EMCDDA, OAS/CICAD, Council of Europe/Pompidou Group, African Union, ECOWAS as the participating organizations. The involvement of national experts at all stages of the work on the indicator, from methodology development to data collection and validation, will be through the network of focal points and institutions (nominated by member states) within each of the international and regional organizations. Existing entities which will contribute to the process are: UNODC Scientific Advisory Group on the World Drug Report, WHO Technical Advisory Group on Alcohol and Drug Epidemiology (TAG-ADE), WHO Expert Panel on Drug Dependence and Alcohol Problems and the network of WHO Collaborating Centres.

What is the involvement of or how do you plan to involve National Statistical Systems in the development of the methodology?

National statistical systems with data on drugs and health are engaged through the network of focal points and institutions during the process of data collection and validation undertaken by UNODC and WHO. The data from national statistical bodies is provided to UNODC and WHO by focal points nominated by the governments. Representatives of national authorities will be involved in the planned expert consultations, also within activities implemented by the IATWG-DE. Produced
Goal 3: Ensure healthy lives and promote well-being for all at all ages

estimates will be validated with the national authorities through the consultation processes well established in UNODC and WHO.

Please briefly describe the process of developing the methodology for the indicator

The development of the indicator involves a mix of methodological developments drawing on both substantive (drug epidemiology) and statistical expertise. The work will include production of a discussion paper on methodology for the indicator, the process of broad consultations involving national focal points and statistical entities, development of data collection tools, pilot data collection in selected countries, revision of the methodology and data collection tools based on results of piloting, and finalization of the methodology up with development of guidelines for measuring and reporting on the indicator through the national drug and health statistical systems as well as and its integration in the appropriate data collection activities of UNODC and WHO.

Please indicate new international standards that will need to be proposed and approved by an intergovernmental process (such as UNSC) for this methodology.

The new statistical standards will be required to define key concepts and measurements involved in the production of statistics, i.e., defining different treatment modalities and concept of the coverage as applied for substance use disorders, such as related to measuring the number of people provided drug treatment and the number of people in need of drug treatment. Such international standards will be developed through the above-described process of the work on the indicator, and relevant statistical definitions and measurements will be submitted for approval to the relevant intergovernmental and advisory bodies such as the Commission on Narcotic Drugs, the UN Statistical Commission, and, as appropriate, governing bodies of WHO and WHO Expert Committees.

When do you expect the methodological work on this indicator to be completed?

Subject to the availability of financial resources, all the methodological work on the indicator, including piloting of data collection, is expected to be completed by the end of 2018, but the main work on the methodology – by mid/end of 2017.

Are data and metadata already being collected from the National Statistical System for one or more components of this indicator?

Yes.

If yes, please describe:

The reporting on the indicators by the Member States is mandated by the Drug Conventions and related intergovernmental bodies. UNODC data collection on drugs epidemiology (including prevention and treatment) and some WHO key alcohol-related indicators is annual. Data collection by WHO on prevention and treatment resources for substance use disorders takes place every two to three years. Additional information is collected through systematic literature reviews and modelling activities for generating or improving the estimates of prevalence of substance use disorders in populations and treatment coverage at different levels of health systems.

How do you plan to collect the data?
Goal 3: Ensure healthy lives and promote well-being for all at all ages

The data will continue to be collected as implemented and mandated by the intergovernmental bodies. That will involve global and regional surveys addressed to governmental entities or focal points designated by the governments. Additional information will be collected through the literature reviews and passive surveillance of relevant data sources.

If the indicator involves multiple components from different data sources, please describe how each individual component of the indicator will be collected here.

The data will be collected from the institutions that manage components of the indicators, i.e., administrative records on the number of people provided treatment (numerator), and indirect methods on the estimates of people in need of treatment (denominator). In addition data on number of people entering and completing treatment, number of treatment programs and their capacity, percentage of patients involved in particular treatment modalities will be based on all available information.

With what frequency is data expected to be collected?

The frequency of data collection will remain the same as mandated by the intergovernmental bodies and described above.

Is there a process of data validation by countries in place or planned for this indicator?

Yes

If yes, please briefly describe:

Both UNODC and WHO have an established policy to ask Member States to validate the compiled data through their identified national institutions or focal points. Comments received from Member States if any are dealt with and resolved through one to one communication with the responsible entities in the Member States before data are published.
Goal 3: Ensure healthy lives and promote well-being for all at all ages

Target number: 3.8

Indicator Number and Name: 3.8.1 UHC coverage of essential health services

Agency: WHO

Has work for the development of this indicator begun? Yes

Who are the entities, including national and international experts, directly involved and consulted in developing the methodology and or data collection tools?

"Starting in 2012, the World Health Organization and World Bank have led a consultative process to arrive at the proposed indicator for 3.8.1, which is an index of coverage levels of 16 essential health services. In particular, this process included five formal technical meetings with broad participation from country governments, academics, civil society organizations and UN agencies. The following website contains meeting reports from these five meetings, which document the evolution of the measurement approach and definition of the indicator over the past 5 years: http://www.who.int/healthinfo/universal_health_coverage/en/. A variety of informal discussions have also occurred between WHO/World Bank staff and various stakeholders.

More details on the five technical meetings, including the institutions and organizations that participated in the discussions, are as follows:

Participants from: Imperial College London (United Kingdom), Duke NUS Graduate Medical School (Singapore), Harvard Medical School (USA), Johns Hopkins University (USA), International Health Policy Program (Thailand), Erasmus University (Netherlands), Institute for Health Policy (Sri Lanka), JICA (Japan), World Health Organization, World Bank, Rockefeller Foundation, Save the Children

Participants from: Universidad de Desarrollo (Chile), Peking University (China), Ministry of Health (Thailand), Ifakara Health Institute (Tanzania), Erasmus University (Netherlands), International Centre for Diarrhoecal Disease Research (Bangladesh), Federal University of Bahia (Brazil), Human Sciences Research Council (South Africa), Institute for Health Metrics and Evaluation (USA), Tunis El Manar University (Tunisia), JICA (Japan), USAID (USA), Rockefeller Foundation, Macro, OECD, World Health Organization, World Bank

Participants from numerous civil society organizations.
Goal 3: Ensure healthy lives and promote well-being for all at all ages

Participants from: Center for Child and Adolescent Health (Bangladesh), International Centre for Diarrhoeal Disease Research (Bangladesh), Instituto de Saude Coletiva, Federal University of Bahia (Brazil), Universidad del Desarrollo (Chile), Ministry of Social Development (Chile), Peking University (China), State Health and Family Planning Commission (China), Ministry of Health (China), Peking University (China), Ministry of Social Affairs (Estonia), National Institute for Health Development (Estonia), Health Streams International (Ghana), Ghana Health Service (Ghana), Institute of Public Health Bangalore (India), Tata Institute of Social Sciences Mumbai (India), Public Health Foundation of India (India), Institute for Family Welfare/Ministry of Health (India), Ministry of Health (Peru), Ministry of Health (Singapore), Duke NUS Graduate Medical School (Singapore), National University of Singapore (Singapore), University of Cape Town (South Africa), Ifakara Health Institute (Tanzania), Ministry of Health (Thailand), Tunis El Manar University (Tunisia), University of Carthage (Tunisia), Health Strategy and Policy Institute (Viet Nam), USAID (USA), GIZ (Germany), Abt Associates, World Health Organization, World Bank, and Rockefeller Foundation.

5. Technical meeting on measurement of trends and equity in coverage of health interventions in the context of universal health coverage, Rockefeller Foundation Center, Bellagio, 17-21 September 2012. (Meeting report: http://www.who.int/healthinfo/universal_health_coverage/UHC_Meeting_Bellagio_Sep2012_Report.pdf?ua=1)

Participants from: Ghana Medical School (Ghana), University of Ghana (Ghana), University of Oxford (United Kingdom), Federal University of Bahia (Brazil), University of Pelotas (Brazil), Johns Hopkins University (USA), Health Systems Trust (South Africa), International Centre for Diarrhoeal Disease Research (Bangladesh), BRAC University (Bangladesh), University Icesi (Colombia), University of Cape Town (South Africa), USAID (USA), World Health Organization, ICF International

What is the involvement of or how do you plan to involve National Statistical Systems in the development of the methodology?

"As can be seen in the above lists, many government representatives have participated in the process to date. WHO/World Bank will continue to seek their contributions as the indicator is finalized. One critical mechanism for doing this is the WHO country consultation process, which WHO undertakes based on WHO Executive Board resolution (EB107.R8) before publishing estimates at country level on behalf of member states. For any given indicator, this process starts with WHO sending a formal request to country missions to nominate a focal point for the consultation on the indicator. Once member states nominate focal points, WHO then sends draft estimates and methodological descriptions to them. The focal points then send WHO their comments, often including new data that are used to update the country estimates. WHO plans to conduct a country consultation on the proposed UHC service coverage index in the second half of 2016.

Secondly, if it is of interest, WHO/World Bank would like to host a meeting to discuss the measurement of SDG Target 3.8 with representatives of National Statistical Offices, including IAEG members if they are interested, in September 2016."

Please briefly describe the process of developing the methodology for the indicator

"In response to governments’ calls for technical support on UHC monitoring, WHO and the World Bank came together to produce a UHC monitoring framework, which is based on a series of country
Goal 3: Ensure healthy lives and promote well-being for all at all ages

case studies and technical reviews as well as consultations and discussions with country representatives, technical experts and global health and development partners. The framework focuses on the two key components of UHC: coverage of the population with quality, essential health services and coverage of the population with financial protection. In addition to the technical consultations described above, several publications (http://www.who.int/healthinfo/publications_uhc/en/) have supported the development of the indicator, and are described below. Going forward, WHO/World Bank will continue to engage with stakeholders, as discussed in above responses.

2. Monitoring progress towards universal health coverage at country and global levels: framework, measures and targets. Joint WHO/World Bank paper, May 2014. This paper was written on the basis of consultations and discussions with country representatives, technical experts and global health and development partners, including an online consultation based on a draft paper. See here: http://www.who.int/healthinfo/universal_health_coverage/report/2014/en/

3. PLOS Medicine series, including following article written by WHO and World Bank staff: Monitoring progress towards universal health care coverage at country and global levels, by Ties Boerma, Patrick Eozenou, David Evans, Tim Evans, Marie-Paule Kieny, Adam Wagstaff. Sept 2014. See here for full collection on monitoring UHC that was organized by WHO/World Bank: http://collections.plos.org/uhc2014/.

Please indicate new international standards that will need to be proposed and approved by an intergovernmental process (such as UNSC) for this methodology.

There are no new international standards required. A point of emphasis in the development of the index has been that it should be calculated from common, existing indicators that countries already monitor, so as to avoid an additional reporting burden from new indicators. In terms of how the index is actually computed, methodologies used for the calculation of the Human Development Index are employed.

When do you expect the methodological work on this indicator to be completed?

February 2017. WHO/World Bank will publish estimates of 3.8.1 before spring 2017, including country-level values for the UHC service coverage index. These figures will be finalized following a WHO country consultation in fall 2016, so that countries can review and comment on methodology and results, and provide additional data, before publication.

Are data and metadata already being collected from the National Statistical System for one or more components of this indicator?

Yes

If yes, please describe:

Most of the indicators are already available from countries. There are some gaps (for example, cervical cancer screening rates and access to essential medicines), but for these there seems to be general agreement that countries will begin collecting these indicators in the near future as they are important for policy and planning. More details on metadata for the index for 3.8.1, as well as for the individual tracer indicators used to compute it, are available in the following technical note that WHO
Goal 3: Ensure healthy lives and promote well-being for all at all ages

published in May 2016:

How do you plan to collect the data?

Send questionnaire(s) to country, Obtain data directly from country database/website, Joint survey/compilation with national agency and international entity

If the indicator involves multiple components from different data sources, please describe how each individual component of the indicator will be collected here.

In general, values for tracer indicators are computed from national population-based survey data (e.g., coverage of family planning and improved water and sanitation), as well as administrative data that countries report to WHO (e.g., immunization coverage, HIV and TB treatment coverage, and health workforce density). Specific details on each of the 16 tracer indicators used for computing the index for 3.8.1 are provided in the following technical note:

With what frequency is data expected to be collected?

Every 1-5 years. The frequency of data collection varies across tracer indicators, but countries typically collect new data every 1 to 5 years. For indicators coming from national administrative data systems, such as for child immunization coverage, data are collected each year. However, for some other indicators, such as four or more antenatal care visits during pregnancy, those are often collected in national surveys (like DHS), which are conducted every 4-5 years. Although every 4-5 years is not ideal, for tracking progress in changes in service coverage this is not an unreasonable time frame. The UHC index itself will be updated every 2 years by WHO/World Bank, using the most recent data available for each tracer indicator from each country.

Is there a process of data validation by countries in place or planned for this indicator?

Yes

If yes, please briefly describe:

WHO will conduct a formal country consultation before publishing country estimates of 3.8.1. Please see response in 6.2.2 for details of this process.

If you have any additional comments that you believe would be helpful to IAEG-SDG members in analysing the work plan and methodological development of the indicator, please provide them here:

We note that it may be desirable for some of the tracer indicators included in the index to change in future years, if circumstances in countries dictate and in particular as more data become available, and following consultation with all stakeholders.
Goal 3: Ensure healthy lives and promote well-being for all at all ages

Target number: 3.8

Indicator Number and Name: 3.8.2 Number of people covered by health insurance or a public health system per 1,000 population

Agency: WHO

Has work for the development of this indicator begun? No

If you have any additional comments that you believe would be helpful to IAEG-SDG members in analysing the work plan and methodological development of the indicator, please provide them here:

"Target 3.8, universal health coverage, has two dimensions: (1) ensuring that people are able to get the health services that they need (service coverage); and (2) ensuring that people are protected against the financial consequences of paying for health services (financial risk protection). Correspondingly, indicator 3.8.1 is meant to reflect service coverage, and indicator 3.8.2 is meant to reflect financial protection. However, the newly proposed indicator for 3.8.2 contained in Annex IV of the 19 February 2016 Report of the IAEG is not a valid measure of financial protection.

Granting people the right to use government health services free of charge (or at low cost) or covering them with health insurance are mechanisms that countries use to provide and extend financial protection to their populations. However, both “insurance” and “public health system” are very broad terms that mask a wide variety of specific mechanisms used to provide protection against the financial consequences of paying for health care at the point of use. But, the mere existence of affiliation to a health insurance scheme or entitlement to a public health system is not sufficient to ensure that household are indeed financially protected against the cost of healthcare.

International experience shows that people may be legally entitled to a public health system but still not able to obtain health services without making substantial payments. Similarly, there is large variation in what constitutes “health insurance” from country to country, with very different implications for the objective of financial protection in health. As a result, and as shown by the experience of many countries, people’s protection against the financial consequences of using health services can change substantially over time even with no change in the extent of affiliation to health insurance schemes or their legal entitlement to a public health system.

For all these reasons, the indicator based on insurance affiliation or public health system coverage is not a valid measure of financial protection.

WHO recognizes that the IAEG has not agreed to the initial proposal for indicator 3.8.2 contained in Annex III of the 19 February 2016 IAEG report (“Fraction of the population experiencing catastrophic/impoverishing out-of-pocket health expenditure”). In response to IAEG concerns, WHO and the World Bank are submitting a refined proposal through this platform to the IAEG."
Goal 3: Ensure healthy lives and promote well-being for all at all ages

Target number: 3.8

Indicator Number and Name: REFINEMENT OF WORDING from the list of proposed SDG indicators included in the IAEG report submitted to the 47th session of the UN Statistical Commission (as of February 2016): 3.8.2 Lack of financial protection coverage

Agency: WHO

Has work for the development of this indicator begun? Yes

Who are the entities, including national and international experts, directly involved and consulted in developing the methodology/and or data collection tools?

Since 2012, the World Health Organization and the World Bank have being engaging in a consultative process to confront the proposed indicator 3.8.2 to the review of Members States, development partners, civil society and other interested stakeholders. The following website contains meeting reports from these five meetings, which document the evolution of the measurement approach and definition of the indicator over the past 5 years: http://www.who.int/healthinfo/universal_health_coverage/en/. A variety of informal discussions have also occurred between WHO/World Bank staff and various stakeholders.

More details on the five technical meetings, including the institutions and organizations that participated in the discussions on 3.8.2, are as follows:

Participants from: Imperial College London (United Kingdom), Duke NUS Graduate Medical School (Singapore), Harvard Medical School (USA), Johns Hopkins University (USA), International Health Policy Program (Thailand), Erasmus University (Netherlands), Institute for Health Policy (Sri Lanka), JICA, World Health Organization, World Bank, Rockefeller Foundation, Save the Children

Participants from: Universidad de Desarrollo (Chile), Peking University (China), Ministry of Health (Thailand), Ifakara Health Institute (Tanzania), Erasmus University (Netherlands), International Centre for Diarrhoeal Disease Research (Bangladesh), Federal University of Bahia (Brazil), Human Sciences Research Council (South Africa), Institute for Health Metrics and Evaluation (USA), Tunis El Manar University (Tunisia), Rockefeller Foundation, Macro, JICA, USAID, OECD, World Health Organization, World Bank
**Goal 3: Ensure healthy lives and promote well-being for all at all ages**

Participants from numerous civil society organizations.

Participants from: Center for Child and Adolescent Health (Bangladesh), International Centre for Diarrhoeal Disease Research (Bangladesh), Instituto de Saude Coletiva, Federal University of Bahia (Brazil), Universidad del Desarrollo (Chile), Ministry of Social Development (Chile), Peking University (China), State Health and Family Planning Commission (China), Ministry of Social Affairs (Estonia), National Institute for Health Development (Estonia), Health Streams International (Ghana), Ghana Health Service (Ghana), Institute of Public Health Bangalore (India), Tata Institute of Social Sciences Mumbai (India), Public Health Foundation of India (India), Institute for Family Welfare/Ministry of Health (India), Ministry of Health (Peru), Ministry of Health (Singapore), Duke NUS Graduate Medical School (Singapore), National University of Singapore (Singapore), University of Cape Town (South Africa), Ifakara Health Institute (Tanzania), Ministry of Health (Thailand), Tunis El Manar University (Tunisia), University of Carthage (Tunisia), Health Strategy and Policy Institute (Viet Nam), Abt Associates, World Health Organization, World Bank, Rockefeller Foundation, USAID, and GIZ.

5. Technical meeting on measurement of trends and equity in coverage of health interventions in the context of universal health coverage, Rockefeller Foundation Center, Bellagio, 17-21 September 2012. (Meeting report: http://www.who.int/healthinfo/universal_health_coverage/UHC_Meeting_Bellagio_Sep2012_Report.pdf?ua=1)

Participants from: Ghana Medical School (Ghana), University of Ghana (Ghana), University of Oxford (United Kingdom), Federal University of Bahia (Brazil), University of Pelotas (Brazil), Johns Hopkins University (USA), Health Systems Trust (South Africa), International Centre for Diarrhoeal Disease Research (Bangladesh), BRAC University (Bangladesh), University Icesi (Colombia), University of Cape Town (South Africa), World Health Organization, USAID, ICF International

In addition to the technical consultations described above, several publications (http://www.who.int/healthinfo/publications_uhc/en/) have supported the development of the indicator, and are described below.

https://openknowledge.worldbank.org/bitstream/handle/10986/22026/9781464804540.pdf?sequence=2
Goal 3: Ensure healthy lives and promote well-being for all at all ages

3. Monitoring progress towards universal health coverage at country and global levels: framework, measures and targets. Joint WHO/World Bank paper, May 2014. This paper was written on the basis of consultations and discussions with country representatives, technical experts and global health and development partners, including an online consultation based on a draft paper. See here: http://www.who.int/healthinfo/universal_health_coverage/report/2014/en/

4. PLOS Medicine article written by WHO and World Bank staff: Monitoring progress towards universal health care coverage at country and global levels, by Ties Boerma, Patrick Eozenou, David Evans, Tim Evans, Marie-Paule Kieny, Adam Wagstaff. Sept 2014. See here for full collection on monitoring UHC that was organized by WHO/World Bank: http://collections.plos.org/uhc2014

What is the involvement of or how do you plan to involve National Statistical Systems in the development of the methodology?

"As can be seen in the above lists, many government representatives have participated in the process to date. WHO/World Bank will continue to seek their contributions as the indicator is finalized. One critical mechanism for doing this is the WHO country consultation process, which WHO undertakes based on WHO Executive Board resolution (EB107.R8) before publishing estimates at country level on behalf of member states. For any given indicator, this process starts with WHO sending a formal request to country missions to nominate a focal point for the consultation on the indicator. Once member states nominate focal points, WHO then sends draft estimates and methodological descriptions to them. The focal points then send WHO their comments, often including new data that are used to update the country estimates. WHO plans to conduct a country consultation on country level estimates of lack of financial protection coverage in the second half of 2016.

In addition to this consultation, the World Health Organization and the World Bank regularly undertake training events on the measurement of lack of financial protection coverage which involves participants from Ministry of Health as well as from National Statistical Offices.

WHO/World Bank would like to host a meeting to discuss the measurement of SDG Target 3.8 with representatives of National Statistical Offices, including IAEG members if they are interested, in September 2016.

This invitation follows a World Health Assembly resolution on “Health in the 2030 Agenda for Sustainable Development” which passed in May 2016 and requests the WHO Director-General “to work with the Inter-Agency and Expert Group on Sustainable Development Goal Indicators, as appropriate, for the further development and finalization of the health-related Sustainable Development Goal indicators” (http://apps.who.int/gb/ebwha/pdf_files/WHA69/A69_R11-en.pdf?ct=t(Health_Data_Collaborative_Monthly_Update6_9_2016)&mc_cid=317558b457&mc_eid=6c51c70e43)

Please briefly describe the process of developing the methodology for the indicator

"In response to governments’ calls for technical support on UHC monitoring, WHO and the World Bank came together to produce a UHC monitoring framework, which is based on a series of country case studies and technical reviews as well as consultations and discussions with country representatives, technical experts and global health and development partners. The framework focuses on the two key components of UHC: coverage of the population with quality, essential health services and coverage of the population with financial protection.

This framework proposes to measure 3.8.2 as proposed in Annex III of the 19 February 2016 IAEG report (“Fraction of the population experiencing catastrophic/impoverishing out-of-pocket health
Goal 3: Ensure healthy lives and promote well-being for all at all ages

expenditure”). WHO and the World Bank recognizes that the IAEG has not agreed to the initial proposal for indicator 3.8.2.

In response to IAEG concerns, WHO and the World Bank are submitting a refined proposal through this platform. This alters the wording of indicator 3.8.2 from the list of proposed SDG indicators (as of 17 December 2015), as follows: "Lack of financial protection coverage"

This is estimated as the proportion of the population with large household expenditures on health as a share of total household expenditure or income (e.g. greater than 25%).

This indicator focuses on high levels of spending relative to household’s economic resources (e.g. devoting more than a quarter of income to health services). The concern is indeed with the cost of health services (including medicines and other health inputs) that has an impact on household’s living standard. In response to high levels of health spending absorbing a large share of household’s budget the consumption of other necessary goods and services might be forgone but no one should have to choose between sending children to school or getting the care they need."

Please indicate new international standards that will need to be proposed and approved by an intergovernmental process (such as UNSC) for this methodology.

"No new international standard will be needed as the proposed definition relies on an already existing international standard. As previously mentioned, the indicator of lack of financial protection coverage (3.8.2) is computed as an upper partial moment of a health expenditure budget share distribution. The two main aggregates of interest for estimation are household consumption expenditure on health and total household consumption expenditure. The former follows the UN Classification of Individual Consumption According to Purpose (COICOP), specifically code 6. Information on household’s total consumption expenditure can be reconstructed in those survey by summing expenses on all COICOP components.

COICOP is currently being revised by UNSC and WHO has approached the technical sub-working group to ensure that the revision of code 6 will be relevant to the monitoring of indicator 3.8.2 as well as relevant to inform national health accounts."

When do you expect the methodological work on this indicator to be completed?

The World Health Organization and the World Bank are not developing methods to measure the lack of financial protection coverage anymore as they already exist. Instead, The World Bank and WHO will publish estimates of 3.8.2 before spring 2017, including country-level values for the lack of financial protection coverage for 112 countries accounting for 90% of the World Population. These figures will be finalized following a WHO country consultation in fall 2016, so that countries can review and comment on methodology and results, and provide additional data, before publication.

Are data and metadata already being collected from the National Statistical System for one or more components of this indicator?

Yes

If yes, please describe:

"Indicator 3.8.2. on “the lack of coverage by a form of financial protection” is estimated as the proportion of the population with large household expenditures on health as a share of total household expenditure or income (e.g. greater than 25%). National statistical offices conducting household surveys on household budget; income and expenditure or integrated household survey do compile
Goal 3: Ensure healthy lives and promote well-being for all at all ages

metadata on the construction of the two main aggregates of interest, i.e. household expenditure on health and total household expenditure. More details on metadata for the index for 3.8.2, are available from WHO website:

How do you plan to collect the data?

Obtain data directly from country database/website, Joint survey/compilation with national agency and international entity

With what frequency is data expected to be collected?

The frequency of data collection varies across countries following schedules of household surveys (from annual to up to every five years)

Is there a process of data validation by countries in place or planned for this indicator?

Yes

If yes, please briefly describe:

Yes. WHO will conduct a formal country consultation before publishing country estimates of 3.8.2. Please see response in 6.2.2 for details of this process.
Goal 3: Ensure healthy lives and promote well-being for all at all ages

Target number: 3.b

Indicator Number and Name: a) Indicator 3.b.1.a: Proportion of the population with access to affordable vaccines on a sustainable basis. The indicator is the “Percentage of countries reaching and sustaining 90% national coverage and 80% in every district with all vaccines in national programmes.” The indicator is already agreed by all WHO member states through the Global Vaccine Action Plan (GVAP), which was endorsed at the 2012 World Health Assembly. The data are already collected annually by countries and shared with WHO-UNICEF. Until 2020, WHO will use the same operational definition and targets as in the GVAP (i.e. limit to coverage with infant vaccines with the 90/80 coverage target). Prior to 2020, SAGE will review the operational definitions and discuss any revisions, based on newer vaccines across the life course that are available and recommended for use in national programmes by WHO. b) Indicator 3.b.1.b: Proportion of the population with access to affordable medicines on a sustainable basis: The indicator is the “Proportion of countries with a defined basket of medicines available in facilities”. The basket of medicines was updated in 2015, and includes medicines for the main diseases and populations of interest in terms of universal health coverage and access for all. Sources of data currently available are the Service Availability and Readiness Assessment (SARA) surveys and other ad hoc surveys such as the Health Action International (HAI) data reports, but over time WHO will propose to standardise these to reports that can be generated from country information systems. This standardisation will involve other WHO departments and possibly the Health Data collaborative.

Agency: WHO

Has work for the development of this indicator begun? Yes

Who are the entities, including national and international experts, directly involved and consulted in developing the methodology/and or data collection tools?

"a) Indicator 3.b.1.a: Proportion of the population with access to affordable vaccines on a sustainable basis.
A working group composed of various stakeholders involved in the immunization area was convened to discuss potential different indicators for the vaccine component of 3.b.1. The group was composed by The Bill & Melinda Gates Foundation, The Center for Vaccine Ethics and Policy, Division of Medical Ethics, NYU School of Medicine, USA; Gavi the Vaccine Alliance; The US Centers of Disease control and Prevention; UNICEF and WHO.

After exploring possible options and taking into account several criteria (availability, additional burden for the countries, quality, comparability, clarity…), the group selected an indicator which is already used to review the progress towards the achievement of the Global Vaccine Action plan 2011-2020, a global strategy endorsed by all members states of WHO in 2012. This indicator was then submitted to the WHO Strategic Advisory Group of Experts for immunization (SAGE) for comments and validation. SAGE is the principal advisory group to WHO for vaccines and immunization. It is charged with advising WHO on overall global policies and strategies, ranging from vaccines and technology, research and development, to delivery of immunization and its linkages with other health interventions. WHO SAGE discussed the proposed indicator and officially endorsed the proposition.

b) Indicator 3.b.1.b: Proportion of the population with access to affordable medicines on a sustainable basis
This indicator is not a new approach and has been used in the past in collaboration with several partners. WHO and Health Action International (HAI) Partners include governments, NGOs,
Goal 3: Ensure healthy lives and promote well-being for all at all ages

Regional network of consumers and non-profit organizations, health professionals associations, independent experts.

With regard to the service availability and readiness assessment (SARA), the methodology was developed through a joint World Health Organization (WHO) – United States Agency for International Development (USAID) collaboration to fill critical gaps in measuring and tracking progress in health systems strengthening. SARA Methodology draws on best practices and lessons learned from the many countries that have implemented health facility assessments as well as guidelines and standards developed by WHO technical programmes and the work of the International Health Facility Assessment Network (IHFAN)."

What is the involvement of or how do you plan to involve National Statistical Systems in the development of the methodology?

"a) Indicator 3.b.1.a: Proportion of the population with access to affordable vaccines on a sustainable basis.

The proposed indicator is based on data already collected by all countries using their National Statistical Systems. The indicator is based on immunization coverage rates for various vaccines. Those data are collected on a day-to-day basis for programmatic and policy objectives at sub national levels and are collated at national level and reported to WHO and UNICEF through country and regional offices in the WHO-UNICEF Joint Reporting Form.

b) Indicator 3.b.1.b: Proportion of the population with access to affordable medicines on a sustainable basis

Sources of data currently available are the Service Availability and Readiness Assessment (SARA) surveys and other ad hoc surveys such as the Health Action International (HAI) data reports, but over time WHO will propose to standardise these to reports that can be generated from country information systems. This standardisation will involve other WHO departments and possibly the Health Data collaborative."

Please briefly describe the process of developing the methodology for the indicator

"a) Indicator 3.b.1.a: Proportion of the population with access to affordable vaccines on a sustainable basis.

The working group composed by immunization stakeholders listed all potential indicators with merits and limitations for each of them (availability, additional burden for the countries, quality, comparability, clarity…). Based on those criteria, the group reached a consensus on the proposed indicator. The proposed indicator was then shared with the SAGE for comments and validation. SAGE endorsed the proposed indicator.

b) Indicator 3.b.1.b: Proportion of the population with access to affordable medicines on a sustainable basis

This indicator is not a new a new approach and has been used in the past in collaboration with several partners.

The SARA methodology builds upon previous and current approaches designed to assess service delivery including the service availability mapping (SAM) tool developed by WHO, and the service provision assessment (SPA) tool developed by ICF International under the USAID-funded MEASURE DHS project (monitoring and evaluation to assess and use results, demographic and health surveys) project, among others.

With regard to the WHO/HAI medicine price, availability and affordability survey methodology, it can be downloaded from the WHO website at http://www.who.int/medicines/publications/med_price_availability/en/"
Goal 3: Ensure healthy lives and promote well-being for all at all ages

Please indicate new international standards that will need to be proposed and approved by an intergovernmental process (such as UNSC) for this methodology.

None

When do you expect the methodological work on this indicator to be completed?

a) Indicator 3.b.1.a: Proportion of the population with access to affordable vaccines on a sustainable basis. The group of immunization stakeholder and the SAGE will review the methodology behind this indicator, taking into account that this indicator is already used for the past 4 years to review the progress towards the achievement of the Global Vaccine Action plan 2011-2020, a global strategy endorsed by all members states of WHO in 2012. This review of the existing GVAP indicator will take coverage data that are becoming available since the operational definitions for the existing indicators were developed and consider whether any modifications to the operational definitions are required. The expected date for validation is early September 2016. b) Indicator 3.b.1.b: Proportion of the population with access to affordable medicines on a sustainable basis. In addition to the SARA and WHO/HAI Methodologies, in the last few months, WHO developed a quick survey method for facility level data, that has allowed us to at least get preliminary data on availability (and price) from about 20 countries for the defined “medicines basket”. This will be discussed this further with the countries at a meeting in Addis in June 2016.

Are data and metadata already being collected from the National Statistical System for one or more components of this indicator?

Yes

If yes, please describe:

"a) Indicator 3.b.1.a: Proportion of the population with access to affordable vaccines on a sustainable basis. The proposed indicator is based on data already collected by all countries using their National Statistical Systems. The indicator is based on immunization coverage rates for various vaccines. Those data are collected on a day-to-day basis for programmatic and policy objectives at sub national levels and are collated at national level.

b) Indicator 3.b.1.b: Proportion of the population with access to affordable medicines on a sustainable basis. Sources of data currently available are the Service Availability and Readiness Assessment (SARA) surveys and other ad hoc surveys such as the Health Action International (HAI) data reports, but over time WHO will propose to standardise these to reports that can be generated from country information systems. This standardisation will involve other WHO departments and possibly the Health Data collaborative."

How do you plan to collect the data?

Obtain data directly from country database/website, Joint survey/compilation with national agency and international entity

If the indicator involves multiple components from different data sources, please describe how each individual component of the indicator will be collected here.

"a) Indicator 3.b.1.a: Proportion of the population with access to affordable vaccines on a sustainable basis."
Goal 3: Ensure healthy lives and promote well-being for all at all ages

The data are already collected by Countries for programmatic and policy objectives. Every year for almost the past 30 years, WHO and UNICEF are collecting those data through the Joint Reporting Form. In addition, to those data, WHO and UNICEF collect vaccine coverage data from country surveys (MICS, DHS...).

b) Indicator 3.b.1.b: Proportion of the population with access to affordable medicines on a sustainable basis

With what frequency is data expected to be collected?

"a) Indicator 3.b.1.a: Proportion of the population with access to affordable vaccines on a sustainable basis. Data are collected annually by WHO and UNICEF. b) Indicator 3.b.1.b: Proportion of the population with access to affordable medicines on a sustainable basis. The new WHO quick survey method developed for facility level data to measure the availability for the defined “medicines basket” will still be discussed with countries at a meeting in Addis in June 2016. We could expect to have data collected on a yearly basis."

Is there a process of data validation by countries in place or planned for this indicator?

Yes

If yes, please briefly describe:

"a) Indicator 3.b.1.a: Proportion of the population with access to affordable vaccines on a sustainable basis. Annually, WHO and UNICEF collect data on immunization from the countries through the Joint Reporting Form process for almost the past 30 years. The process includes a formal validation process by the countries when submitting the form.

b) Indicator 3.b.1.b: Proportion of the population with access to affordable medicines on a sustainable basis

The new Methodology proposed and the validation process will be discussed with countries end of June."

If you have any additional comments that you believe would be helpful to IAEG-SDG members in analysing the work plan and methodological development of the indicator, please provide them here:

"a) Indicator 3.b.1.a: Proportion of the population with access to affordable vaccines on a sustainable basis. The indicator 3.b.1 is composed of two completely different component: (1) availability of essential medicines and commodities; and (2) availability of essential vaccines. The selection, financing, distribution and provision of those two health products family are completely different making it impossible to have only one indicator for the SDGs monitoring. The data collection processes for those two type of products also use completely different processes. Therefore, it is proposed to have two components for this indicator:
- one on essential medicines-commodities and
- one on vaccines.

b) Indicator 3.b.1.b: Proportion of the population with access to affordable medicines on a sustainable basis
Goal 3: Ensure healthy lives and promote well-being for all at all ages

We will likely rely to various methodologies to measure access to affordable medicines, using the well-known SARA and WHO/HAI methodologies but also looking at developing new quick survey method for facility level to measure availability to a defined basket of medicines, and in the meantime trying to standardise reports that can be generated from country information systems."
Goal 4: Ensure inclusive and equitable quality education and promote lifelong learning opportunities for all

Goal 4

Target number: 4.1

Indicator Number and Name: 4.1.1 Proportion of children and young people achieving at least a minimum proficiency level in (i) reading and (ii) mathematics

Agency: UNESCO Institute for Statistics (UIS)

Has work for the development of this indicator begun?
Yes, the UIS, with its technical partners, has started work in developing UIS Reporting Scale (Universal Learning Scale, ULS) where cross-national and national assessments could benchmark to and is working with stakeholders toward consensus in defining minimum proficiency levels. Once all existing quality assessments are on the Reporting Scale we could report on the indicator to monitor progress.

Who are the entities, including national and international experts, directly involved and consulted in developing the methodology and/or data collection tools?
There has been substantial work undertaken at international, regional and national level in assessment. There are major cross-national assessments: ERGA, MICS leading module, TERCE, PASEC, PILNA, SACMAQ, PIRLS, TIMSS, LANA (under development), PISA and PISA for Development (under development).

The regional scales have been developed in Africa (PASEC, SACMEQ), Asia (SEA-PLM under development), Latin America (TERCE), and Pacific Islands (PILNA). These cross-national assessments have provided substantial amount of information for countries who participate in the respective assessments.

UIS technical partner, Australia Council for Educational Research – Global Education Monitoring (ACER-GEM) is directly involved in developing the methodology and data collection tools. Assessment organizations and citizen-led assessment which include IEA, PASEC, LLECE, and ASER; and multilateral partners like UNICEF, WBG, OECD, Bill and Melinda Gates Foundation, Brooking Institute, Browns Commission, DFID, DFAT, Education Commission, Education International, EQUAL Global Network for SDG 4, FHI 360, GPE, Inter-American Development Bank, ITA, Norad, Open Society Foundation, Results Education Funds, RTI International, Save the Children, USAID, other UNESCO agencies and the Technical Cooperation Group member states are consulted in the development of the methodology.

What is the involvement of or how do you plan to involve National Statistical Systems in the development of the methodology?
The representatives of the member states, through the Technical Cooperation Group (TCG) on SDG-Education 2030 Indicators (TCG) established in May 2016 (Link to TCG: http://www.uis.unesco.org/Education/Pages/tcg-meeting-may-2016.aspx), which include the National Statistical Offices, are consulted in the development of the methodology. TCG Members are from the same 28 countries which are members of the IAEG-SDGs. In addition there are a number of Observer countries, international and regional organizations and civil society representatives.

Please briefly describe the process of developing the methodology for the indicator
1. Conduct content and construct mapping of national, regional and international assessments.
2. Define the learning/skills that are regional and cultural relevant.
Goal 4: Ensure inclusive and equitable quality education and promote lifelong learning opportunities for all

3. Develop UIS Reporting Scale (Universal Learning Scale, ULS).
4. Define the minimum proficiency level for each measurement point on the Reporting Scale.
5. Develop Data Quality Assurance Framework (DQAF) to guide and benchmark national and cross-national assessments to the Reporting Scale (ULS).
6. Develop standards and guidelines for data collection and data platform for reporting.
7. Build capacity in country to collect and report relevant data which include contextual information.
8. Research pragmatic methodology that is country relevant yet robust for global monitoring to improve inclusiveness and reporting, especially on the harmonization of household-based assessment survey, which collect out-of-school children or young people learning, with the school-based assessment survey.

Please indicate new international standards that will need to be proposed and approved by an intergovernmental process (such as UNSC) for this methodology.
1. International Code of Practice for Learning Assessment (ICP-LA)
2. Data Quality Assurance Framework (DQAF) for learning Assessment
3. A common framework of reference for content/skills.
4. A learning skill scale and minimum competencies for Reading and Mathematics.
5. Standards and guidelines for data collection and reporting platform.

When do you expect the methodological work on this indicator to be completed?
2-3 years

Are data and metadata already being collected from the National Statistical System for one or more components of this indicator?
Metadata are already collected from National Statistical System.
The type of data to collect from countries’ assessment agencies and cross-national agencies will be defined base on the outcomes of the development of tools and mechanism.

If yes, please describe:

Metadata
The UIS existing tool, Learning Assessment Capacity Index (LACI), is providing information on country’s capacity. The UIS is currently improving existing data collection tool, Catalogue of Learning Assessments (CLA), to collect assessment metadata from countries to provide inputs about assessment data quality and coverage. These two sources of metadata will provide information to the development of tools and mechanism for the 4.1.1 indicator.

Data
IEA’s Progress International Reading Literacy Study (PIRLS) and Trend in International Mathematics and Science Study (TIMSS)
OECD’s Programme for International Student Assessment (PISA)
PASEC
SACMEQ
PILNA
TERCE
ERGA
MICS
Goal 4: Ensure inclusive and equitable quality education and promote lifelong learning opportunities for all

How do you plan to collect the data?
Joint survey/compilation with national agency and international entity

Metadata
For LACI the metadata is collected through desk research. For CLA the metadata is collected through the electronic (and paper if electronic version is not feasible) questionnaire. The questionnaire is sent to countries and cross-national (international and regional) assessment agencies.

Data
The actual data collection tools and mechanism of the 4.1.1 indicator will be developed based on these two sources of metadata and further improve when more information becomes available. The data will have to be collected directly from countries, cross-national assessment agencies and citizen-led assessment agencies.

If the indicator involves multiple components from different data sources, please describe how each individual component of the indicator will be collected here.

Metadata
The LACI indicator could be collected through desk research, while the CLA will be collected through questionnaire to countries and cross-national assessment agencies. The questionnaire will be pre-populated to reduce respondents’ burden. The countries and cross-national assessment agencies will be asked to validate the information and fill in the remaining questions.

Data
The collection of cross-national (international and regional) assessments data will need to be negotiated with the assessment agencies like OECD, IEA, LLECE, SACMEQ, PASEC, UNICEF (SEA-PLM), and EQAP (PILNA). The household-based assessment survey will be collected through the citizen-led assessment like ASER and UWEZO. The data collection of national assessment data will be directly through the countries.

With what frequency is data expected to be collected?
3-5 years for the 4.1.1 indicator once the tools and mechanism are developed and functional.

Is there a process of data validation by countries in place or planned for this indicator?
Yes

If yes, please briefly describe:
Two tools and mechanism are planned:
1. International Code of Practice for Learning Assessment (ICP-LA) which includes best practices to help countries develop assessment to produce quality data for the indicator.
2. Data Quality Assurance Framework (DQAF) with Evaluation of Alignment Process (EAP) and Assessment of Data Process (ADP)
   a. EAP: This process will help countries evaluate their national or cross-national assessments’ content and construct if it is aligned to the defined global framework. This will provide the validity of the assessment for global monitoring.
   ADP: This process will help countries evaluate their national or cross-national assessments’ data process if the data produced are of good quality and reliable. This will provide the reliability of the assessment for global monitoring.
Goal 4: Ensure inclusive and equitable quality education and promote lifelong learning opportunities for all

Target number: 4.2

Indicator Number and Name: 4.2.1 Proportion of children under 5 years of age who are developmentally on track in health, learning and psychosocial well-being, by sex

Agency: UNICEF

Has work for the development of this indicator begun? Yes

Who are the entities, including national and international experts, directly involved and consulted in developing the methodology and/or data collection tools?
UNICEF has developed a detailed programme of methodological work towards revising the Early Childhood Development Index (ECDI). This work is already underway, and has begun with the collaboration with an expert advisory panel consisting of academic experts and researchers in the field of early childhood development measurement and tool development, and technical experts in validity and reliability testing and cognitive testing for tool/instrument validation. UNICEF will establish a broader global Inter-agency Advisory and Coordination Group on ECD measurement (IACG-ECD). The Group will comprise other UN agencies such as UNESCO, WHO and the World Bank, as well as selected NSOs and international NGOs.

What is the involvement of or how do you plan to involve National Statistical Systems in the development of the methodology?
National Statistical Offices (NSOs) were involved in the process of the development of the current ECDI that is collected in the UNICEF-supported Multiple Indicator Cluster Surveys (MICS) and other household surveys. The field-testing of ECDI was hosted by a number of NSOs during the last 6 years, including the NSOs of Kenya, Bangladesh, Costa Rica, Belize and Serbia. NSOs have been collecting national, disaggregated data on ECDI through the implementation of their MICS surveys, since 2009.

Selected NSOs will be included in the IACG-ECD. NSOs will play a key role in supporting the testing and validation of the revised ECDI. The technical consultation hosted by UNICEF in September 2016 already included representation from one NSO that will likely take part in cognitive testing of the revised tool.

Please briefly describe the process of developing the methodology for the indicator
In order to capture information on key domains of early childhood development, UNICEF developed, within the context of the MICS programme and with inputs from a broad group of experts and NSOs, a set of specific questions to gather data on the overall developmental status of children. Beginning with the fourth round of MICS (MICS4, primarily implemented between 2009 and 2012), an index was added to measure overall developmental status of children within the domains of physical, literacy-numeracy, social-emotional and learning (the ECDI) and to monitor children’s achievement of universal developmental milestones across countries. Prior to the collection of the ECDI in MICS, there was no internationally comparable data on the overall developmental status of children. To date, comparable data on children’s developmental status, collected using the ECDI, have been produced for nearly 60 low- and middle-income countries. The availability of robust data on ECD led to the development of strong programme work in a large number of countries.
Goal 4: Ensure inclusive and equitable quality education and promote lifelong learning opportunities for all

As evidence of the contribution that the ECDI has played in generating comparable data on the status of children’s development in a variety of settings, the ECDI has been identified as one of the preferred measures to monitor progress towards target 4.2 and ECDI data were featured in the recent Secretary-General’s report Progress towards the Sustainable Development Goals released in June of this year and the companion Sustainable Development Goals Report 2016 launched in July to report on the current situation with respect to goal 4.

With the new monitoring needs set by the SDG agenda in mind, and recognizing the developments in the field of ECD measurement as well as the importance of continued methodological work to improve the quality and relevance of available data, UNICEF has decided to undertake methodological work towards revision of the ECDI. There is an important opportunity now to also ensure that data collected through the ECDI aligns as closely as possible with indicator 4.2.1. Currently, the main differences between the existing MICS-ECDI and the formulation of SDG 4.2.1 pertain to the inclusion of the health domain and the broader age group in the SDG formulation. UNICEF also recognizes the need to further test the ECDI in high-income countries.

Please indicate new international standards that will need to be proposed and approved by an intergovernmental process (such as UNSC) for this methodology.

The overarching purpose of the inter-agency group that will be established by UNICEF is to oversee the revision, testing and validation of the ECDI for use by all countries (including high-income countries), within the context of MICS and other household surveys, to collect internationally comparable, nationally representative and statistically sound data to monitor and track progress towards achieving target 4.2 and to fulfil their reporting obligations.

When do you expect the methodological work on this indicator to be completed?
One year.

Are data and metadata already being collected from the National Statistical System for one or more components of this indicator?
Yes.

If yes, please describe:
As mentioned earlier, MICS surveys have been conducted at regular intervals by several NSOs, and data on ECD, consistent with the existing SDG formulation of indicator 4.2.1 have been collected in more than 60 (mostly low- and middle-income) countries.

When do you expect work to begin on developing a methodology and with which partners will your organisation work?
UNICEF has already begun the process of methodological work to revise the ECDI as a measure of indicator 4.2.1. This work is being undertaken in consultation with a group of technical experts and academics and partners from other UN agencies. To date, UNICEF has already completed a scoping exercise of existing tools and items used to measure ECD, undertaken cognitive testing of the current version of the ECDI and hosted two major technical consultations (one in January 2015 and one in September 2016) with experts and key partners to discuss next steps in the process of the revision of the ECDI and its alignment with SDG 4.2.1.
Goal 4: Ensure inclusive and equitable quality education and promote lifelong learning opportunities for all

How do you plan to collect the data?
The revised ECDI will be available for inclusion in national household surveys as well as in the context of the UNICEF-supported MICS, which are household surveys designed and implemented by national counterparts (mainly NSOs) with technical support from UNICEF.

Some countries may also decide to include the revised ECDI module in other international household surveys such as the Demographic and Health Surveys (DHS) supported by USAID, as well as national surveys that are not part of global household survey programs. UNICEF offices around the world will advocate for the inclusion of ECDI in national and international household surveys.

UNICEF will collect and compile the data through its well-established system of data gathering, compilation and quality assurance, which has been in existence for three decades. Led by a dedicated team of experts on child-related sectors, UNICEF receives, from its field offices, updates on a large set of indicators on an annual basis, updates and maintains global databases, with data that is checked for quality and consistency.

With what frequency is data expected to be collected?
Due to the nature of the indicator, every two to four years, depending on the needs and interests of the country. The indicator is a relatively slow-changing indicator.

Is there a process of data validation by countries in place or planned for this indicator?
All data collected on the ECDI through the MICS are owned and validated by the national implementing agency (mainly NSOs). UNICEF publishes only those data that have been vetted by its country offices, in collaboration with national counterparts.

If you have any additional comments that you believe would be helpful to IAEG-SDG members in analysing the work plan and methodological development of the indicator, please provide them here:
No additional comments.
Goal 4: Ensure inclusive and equitable quality education and promote lifelong learning opportunities for all

Target number: 4.7

Indicator Number and Name: 4.7.1 Extent to which (i) global citizenship education and (ii) education for sustainable development, including gender equality and human rights, are mainstreamed in (a) national education policies (b) curricula (c) teacher education and (d) student assessments.

Target number: 12.8

Indicator Number and Name: 12.8.1 Extent to which (i) global citizenship education and (ii) education for sustainable development (including climate change education) are mainstreamed in (a) national education policies (b) curricula (c) teacher education and (d) student assessments.

Agency:
UNESCO
Section of Education for Sustainable Development and Global Citizenship (ED/IPS/ESG)

Has work for the development of this indicator begun?
Yes.
The most important and relevant data collection mechanism that is currently in place for this indicator is the statutory monitoring process of the UNESCO Recommendation concerning Education for International Understanding, Co-operation and Peace and Education relating to Human Rights and Fundamental Freedoms (1974). The reporting guidelines for the 6th Consultation on the Recommendation (launched in June 2016) cover all key conceptual aspects of GCED and ESD, including climate change education, especially in the areas of policy, curricula, teacher education and student assessment, which correspond to the areas covered by the indicator. The new reporting guidelines were revised by UNESCO in view of improving and simplifying their use, their relevance and alignment with the Global Indicator for Target 4.7. It is expected that these modifications, will also increase the country response rate. The revised guidelines for country reports, which now include a questionnaire, were approved by the 199th Session of the UNESCO Executive Board and are currently being used for the collection of data, due to be submitted to UNESCO by the end of 2016.

Who are the entities, including national and international experts, directly involved and consulted in developing the methodology and/or data collection tools?
UNESCO Executive Board, Member States governments.
The UNESCO Institute for Statistics as key technical partner, the Global Education Monitoring Report (GEM) team and other UNESCO entities; the Global Alliance to Monitor Learning and the Technical Cooperation Group (including its participating member states) can provide support in further developing and fine tuning the methodology and data collection tool.

What is the involvement of or how do you plan to involve National Statistical Systems in the development of the methodology?
As the questionnaire to be used as data collection tool was approved by the UNESCO Executive Board, its members were able to consult with relevant line ministries and National Statistical Systems. Through the UNESCO Institute for Statistics (UIS), the representatives of the member states, through the Technical Cooperation Group (TCG) on SDG-Education 2030 Indicators (TCG) established in May 2016 (Link to TCG: http://www.uis.unesco.org/Education/Pages/tcg-meeting-may-2016.aspx), which include the National Statistical Offices, can be consulted in the fine tuning of the methodology. TCG Members are from the same 28 countries which are members of the IAEG-SDGs. In addition, there are a number of Observer countries, international and regional organizations and civil society representatives.
Goal 4: Ensure inclusive and equitable quality education and promote lifelong learning opportunities for all

Please briefly describe the process of developing the methodology for the indicator
9. Identify established statutory monitoring mechanism to be used for data collection.
11. Submit proposal of revised guidelines including questionnaire for data collection for approval of UNESCO governing body, to be used in next round of consultation on the implementation of the Recommendation.
12. Adoption of revised guidelines including questionnaire and calendar for consultation / data collection exercise
13. Data collection launched through Member States consultation.
14. National reports are received and analysed.
15. Develop Education for Sustainable Development and Global Citizenship Education in policies, curriculum, teacher training and student assessment index (4.7 Index).
16. Report is submitted to UNESCO governing bodies.
17. Revise reporting guidelines towards next data collection exercise (4-year cycles).

Please indicate new international standards that will need to be proposed and approved by an intergovernmental process (such as UNSC) for this methodology.
Guidelines for the preparation of reports by Member States on the application of the Recommendation concerning Education for International Understanding, Co-operation and Peace and Education relating to Human Rights and Fundamental Freedom (1974), to be adopted for each reporting cycle by the UNESCO Executive Board.

When do you expect the methodological work on this indicator to be completed?
2016, then the process will be revised and fine-tuned for the next data collection cycle, every 4 years.

Are data and metadata already being collected from the National Statistical System for one or more components of this indicator?
Yes.

If yes, please describe:
Each Member States completes the national report in consultation with relevant line ministries and authorities.

How do you plan to collect the data?
National reports from Member States submitted to UNESCO

If the indicator involves multiple components from different data sources, please describe how each individual component of the indicator will be collected here.

With what frequency is data expected to be collected?
Every 4 years

Is there a process of data validation by countries in place or planned for this indicator?
To be defined

If yes, please briefly describe:
Goal 5: Achieve gender equality and empower all women and girls

Goal 5

Target number: 5.1

Indicator Number and Name: 5.1.1 Whether or not legal frameworks are in place to promote, enforce and monitor equality and non-discrimination on the basis of sex

Agency: UN Women

Has work for the development of this indicator begun? Yes

Who are the entities, including national and international experts, directly involved and consulted in developing the methodology and or data collection tools?

"UN Women convened a workshop to discuss the methodological development of SDG indicator 5.1.1 ‘Whether or not legal frameworks are in place to promote, enforce and monitor equality and non-discrimination on the basis of sex’. The workshop focused on the content of the indicator, including its conceptual basis and areas of law to be considered, data sources, data collection and global monitoring.

The workshop took place on 14 and 15 June 2016 and was attended by approximately twenty (20) experts from all parts of the world, with in-depth knowledge and experience in law, human rights and/or statistics, including IAEG-SDGs members (Philippines, Colombia and Uganda), lawyers, statisticians, members of UN Treaty bodies, non-governmental organizations and academics. International organizations including ILO, IDLO, OECD, OHCHR, UNDP, UNFPA, UNHCR, UNSD and the World Bank also attended. Staff of UN Women supported the meeting."

What is the involvement of or how do you plan to involve National Statistical Systems in the development of the methodology?

The initial global kick-off workshop to discuss the methodological development of indicator 5.1.1 was attended by the representatives from the National Statistical Offices of Colombia, Philippines and Uganda. Another workshop for Latin American and the Caribbean on SDGs indicators in general, with most NSOs in the region, is planned for September 2016. In addition, following suggestions made at the meeting by representatives of IAEG-SDGs members, UN Women is looking into the feasibility of organizing other regional consultations. The extent of which will depend on demand and availability of resources.

Please briefly describe the process of developing the methodology for the indicator

UN Women has begun working on a methodology through a series of activities, including (i) a concept paper on conceptual basis, areas of law and questions that could be covered and the justification for each as well as possible data sources; (ii) a workshop on 14 and 15 June 2016 (see above); (iii) testing of proposed questions in fall 2016; (iv) regional consultations on SDGs indicators with NSOs and women’s machineries, the first of which is planned for September 2016 in Aguascalientes, Mexico; (iv) presentation of the findings and proposed methodology to the IAEG-SDGs in first quarter of 2017.

Please indicate new international standards that will need to be proposed and approved by an intergovernmental process (such as UNSC) for this methodology.

Presentation of the proposed methodology for SDG indicator 5.1.1 will be made to the IAEG-SDGs in the first quarter of 2017, followed by presentation to UNSC for endorsement.
Goal 5: Achieve gender equality and empower all women and girls

When do you expect the methodological work on this indicator to be completed?

2017

Are data and metadata already being collected from the National Statistical System for one or more components of this indicator?

Yes

If yes, please describe:

In some case, the Ministry of Justice and/or the Ministry of Women's Affairs may collect data on laws and monitor the implementation of these.

When do you expect work to begin on developing a methodology and with which partners will your organisation work?

Data on laws is often not collected, processed or disseminated by bodies within the national statistical system responsible for official statistics. Instead this type of information is maintained by for example the Ministry of Justice or depending on the type of law in question, monitored by the Ministry of Gender Equality (or its equivalent).

How do you plan to collect the data?

Send questionnaire(s) to country, Obtain data directly from country database/website, Joint survey/compilation with national agency and international entity, As part of the indicator development process we are considering various options for data collection mechanisms.

With what frequency is data expected to be collected?

Expected to be every two years

Is there a process of data validation by countries in place or planned for this indicator?

Yes

If yes, please briefly describe:

Options are being considered and will be discussed with countries during the consultation process.

If you have any additional comments that you believe would be helpful to IAEG-SDG members in analysing the work plan and methodological development of the indicator, please provide them here:

"There are a number of global databases that collect national level information on laws that promote gender equality. Two well-known examples are:

1) The World Bank’s Women Business and the Law database. The database looks at various areas, including laws and regulations that prevent women from improving their own well-being and that of their families. The data is collected at the national level and validated with primary sources. Data is collected for 173 countries."
Goal 5: Achieve gender equality and empower all women and girls

2) OECD’s Social Institutions and Gender Index (SIGI). The database maintained by the SIGI project uses qualitative and quantitative data to measure discrimination at national level in laws. Data is collected for 160 countries.

Representatives from both of these entities attended UN Women’s workshop on 5.1.1 and discussions are underway on further collaboration to develop a joint proposal for global monitoring of indicator 5.1.1 using national and other sources and in consultation with national counterparts.

The CEDAW Committee and other international human rights mechanisms also address laws on gender equality during their review of the reports of States parties and other work."
Goal 5: Achieve gender equality and empower all women and girls

Target number: 5.5

Indicator Number and Name: 5.5.1 Proportion of seats held by women in national parliaments and local governments

Agency: UN Women

Has work for the development of this indicator begun? Yes

Who are the entities, including national and international experts, directly involved and consulted in developing the methodology and or data collection tools?

"Indicator 5.5.1 includes two components: (a) proportion of seats held by women in national parliaments and (b) proportion of seats held by women in local governments. The latter component on local government requires some methodological development.

UN Women is leading the process of developing a standardized measurement of women’s representation in local government with involvement of multiple organization and researchers. A first technical meeting on the topic, held in November 2014, brought together experts from international organizations, including UNDP, IDEA, UN-Habitat, UNSD, research institutions, academics and NGOs. UN Women is also consulting with partners within UN Regional Commissions and National Statistical Offices and Women’s Ministries of selected countries on current methods of data collection and data reporting to regional agencies involved. Further plans have been developed to extend the range of experts consulted, including through the means of an Expert Group Meeting on methodology of the indicator 5.5.1b, to be held in October 2016, as well as other inter-agency consultations."

What is the involvement of or how do you plan to involve National Statistical Systems in the development of the methodology?

Development of the indicator methodology involves National Statistical Systems in several ways. UN Women has conducted a mapping exercise of countries’ current practices in collecting data on women’s representation in local government and existing mechanisms of reporting such data to UN Regional Commissions. Selected National Statistical Offices and Women’s Ministries have been consulted on the design, and involved in the testing of data request forms developed by UN Women. Selected National Statistical Offices and/or other governmental agencies are also invited to provide feedback or other input to the background research and draft methodology of the indicator developed by UN Women, and to participate in the Expert Group Meeting (EGM) to be organized in October 2016.

Please briefly describe the process of developing the methodology for the indicator

"Methodological development of this indicator has been supported by several activities: (a) Background research on women’s representation in local government; (b) Review of national Constitutions, Local Government Acts and Electoral Laws on local government organization by tiers and the composition of its deliberative and executive bodies; (c) Mapping of sources and methods of data collection; (d) Consultations with global, regional and national partners; (e) Development of data request forms for global reporting; and (f) Technical meetings, including an upcoming EGM meeting on the methodology of the indicator in October 2016."

Please indicate new international standards that will need to be proposed and approved by an intergovernmental process (such as UNSC) for this methodology.
Goal 5: Achieve gender equality and empower all women and girls

Presentation of the proposed methodology for SDG indicator 5.1.1 will be made to the IAEG-SDGs in 2017, followed by presentation to UNSC for endorsement.

When do you expect the methodological work on this indicator to be completed?

2017

Are data and metadata already being collected from the National Statistical System for one or more components of this indicator?

Yes

If yes, please describe:

UN Regional Commissions in Latin America and the Caribbean and in Europe, and the European Commission are compiling data on women in local government at regional level following methodologies that are slightly different in terms of the exact indicator(s) used, frequency and mechanism of data reporting.

How do you plan to collect the data?

Send questionnaire(s) to country, Obtain data directly from country database/website, as well as through regional commissions (if possible)

With what frequency is data expected to be collected?

To be discussed during the EGM organized by UN Women in October 2016.

Is there a process of data validation by countries in place or planned for this indicator?

Yes

If yes, please briefly describe:

Global monitoring for this indicator will use national data, as submitted by countries. Data extracted directly from country websites/databases will be confirmed through direct dialogue with countries, as needed.
Goal 5: Achieve gender equality and empower all women and girls

Target number: 5.6

Indicator Number and Name: 5.6.2

Agency: UNFPA

Has work for the development of this indicator begun? Yes

Who are the entities, including national and international experts, directly involved and consulted in developing the methodology and or data collection tools?

"UNFPA is leading this work in partnership with UN Women and WHO. The work has been informed by extensive involvement of relevant stakeholders, including from civil society and academia. In January 2016, UNFPA and WHO hosted an Expert Group Meeting exclusively to inform the further development of the methodology for 5.6.2. Based on the recommendations from the EGM, critical elements of the methodology were defined and next steps made clear.

During 2015, several meetings were held with relevant stakeholders to inform the development of both indicators under 5.6. UNFPA, which included other UN agencies, NGOs, and academia, UNSD, WHO, OHCHR, School of Public Health- Columbia University, Centre for Health and Human Rights- Harvard University, International Women’s Health Coalition, International Planned Parenthood Federation, Centre for Reproductive Rights, Amnesty International, Population Council, ICF-DHS, MICS/UNICEF and Guttmacher Institute. Regional consultations on the indicator framework were also undertaken during the fall in 2015 and feedback was incorporated.

In partnership with WHO and UN Women, Professor Theresa McGovern from Columbia University has been taken on as short-term consultant due to her extensive expertise in law and health, She is developing the proposed methodology and international standards, including through a review of existing data and standards.

a. Highlight the process to develop methodology/standards
   - April-August: The consultant will work to deliver the following on 1 September: A detailed paper, including proposal for survey questions, review of existing sources and proposal on process and baseline as well as illustrative country cases for initial testing.
   - September, 2016: Based on the paper, an Expert Group Meeting will be arranged to validate the findings
   - September-December, 2016: Testing of the methodology and design of survey and database"

What is the involvement of or how do you plan to involve National Statistical Systems in the development of the methodology?

"NSOs were present at several consultations on target 5.6. indicators during 2015. Methodology for 5.6.2 were also presented at UNFPA's regional meetings with NSOs in the fall of 2015.

It is the intention to include relevant national actors at the forthcoming EGM in the fall of 2016 for validation, in particular National Human Rights Institutions (NHRIs)."

Please briefly describe the process of developing the methodology for the indicator

"Indicator 5.6.2 measures “Number of countries with laws and regulations that guarantee women aged 15-49 access to sexual and reproductive health care, information and education” in accordance with
Goal 5: Achieve gender equality and empower all women and girls

the Programme of Action of the ICPD and the Beijing Platform for Action and their review conferences as set out in target 5.6.

The ongoing process is focused on the conceptualization of the language in both target 5.6 and indicator and challenges of operationalization in comparative criteria for measurement. The suggested methodology for data collection consists of initial self-reporting by governments through a detailed survey to be developed based on the agreed indicator with detailed questions that safeguard the comparability of state responses. This procedure was successfully applied for the ICPD+20 review survey with support to governments from UNFPA’s country offices where needed. Similarly, the detailed survey will reflect measurement criteria, which are age-appropriate, gender-focused, and human rights-based. Information provided by States could be validated and analyzed further by including information by other stakeholders, including UN Country Teams and UN agencies such as WHO, UNFPA and UN Women who also compile country specific information on legal and regulatory developments on issues pertaining to their respective mandates. The details to safeguard reliable data are underway in the proposal for the final methodology.

Please indicate new international standards that will need to be proposed and approved by an intergovernmental process (such as UNSC) for this methodology.

There are no new international standards to be approved.

When do you expect the methodological work on this indicator to be completed?

December 2016

Are data and metadata already being collected from the National Statistical System for one or more components of this indicator?

No

When do you expect work to begin on developing a methodology and with which partners will your organisation work?

See timeline above

How do you plan to collect the data?

Send questionnaire(s) to country

With what frequency is data expected to be collected?

5 Years

Is there a process of data validation by countries in place or planned for this indicator?

Yes

If yes, please briefly describe:

This is being developed.
Goal 5: Achieve gender equality and empower all women and girls

Target number: 5.a

Indicator Number and Name: 5.a.1

Agency: FAO

Has work for the development of this indicator begun? Yes

Who are the entities, including national and international experts, directly involved and consulted in developing the methodology and/or data collection tools?

"The Evidence and Data for Gender Equality (EDGE) project, a joint initiative of UNSD and UN Women, in collaboration with the Asian Development Bank, the FAO and the World Bank.

Description of the consultative process: The EDGE project has established a participatory mechanism, guided by a Steering Committee (SC), composed of members of the Inter-Agency and Expert Group on Gender Statistics, regional commissions, regional development banks and key agencies that coordinate statistical work. Updates on the project implementation have been brought to the attention of the UN Statistical Commission (UNSC) and the Commission on the Status of Women (CSW), regularly."

What is the involvement of or how do you plan to involve National Statistical Systems in the development of the methodology?

"National Statistical Offices have been consulted during conceptualization and implementation of the EDGE project through 3 expert meetings and 1 mid-term review meeting.

In particular, senior experts in charge of household sample survey programmes from the NSOs of nine countries (China, Georgia, Ghana, Maldives, Mongolia, the Philippines, Rwanda, Uganda and Vanuatu) and senior experts in charge of gender statistics programmes from seven NSOs (Georgia, Ghana, Maldives, Mongolia, Philippines, Uganda and Vanuatu) attended the 2013 United Nations Technical Meeting on Measuring Asset Ownership from a Gender Perspective in Bangkok, where they provided feedback on:
1) The applicability and feasibility of the draft methodology proposed under the EDGE project to measure asset ownership, including agricultural land, at the individual level and;
2) Their capacity to apply the proposed international methods.

In addition, the NSOs of 7 countries (Georgia, Maldives, Mexico, Mongolia, Philippines, South Africa, and Uganda) are piloting data collection under the EDGE initiative to test the proposed methodology for measuring asset ownership from a gender perspective. Notably, Uganda was the host country of a methodological survey experiment implemented in collaboration with the World Bank Living Standards Measurement Study program to assess who in the household should be interviewed to measure individual ownership and control of assets, including agricultural land.

Lessons learned from the country pilots will directly inform the finalization of the methodology for indicator 5a1. Further, all NSOs will have an opportunity to comment on the guidelines (consultation planned for the period December 2016-February 2017) before they are finalised and submitted to the UN Statistical Commission in March 2017."

Please briefly describe the process of developing the methodology for the indicator

"The process can be summarized as follows:
Goal 5: Achieve gender equality and empower all women and girls

- Development of draft methodological guidelines that reviewed extant information on sex-disaggregated asset data collection, proposed a methodology and draft survey module for collecting the data through household surveys and highlighted key gender indicators on asset ownership (2013);
- Review of the draft guidelines, including the identification of problematic methodological areas, by partners and countries (2013);
- Identification of pilot countries (see list above) to test draft methodology and proposed data collection protocols (2014 and 2015);
- Implementation of methodological survey experiment for testing respondent selection protocols (2014);
- Roll out of pilots, including both stand-alone surveys and modules appended to existing nationally-representative household surveys to test: questionnaire design, respondent selection approaches, field survey protocols and indicator constructs (2015 and 2016);
- Analysis of pilot data (2016);
- Revision of methodological guidelines (2016);
- Dissemination of guidelines for feedback by partners and countries (2016);
- Submission of guidelines to UNSC (2017)

Please indicate new international standards that will need to be proposed and approved by an intergovernmental process (such as UNSC) for this methodology.

"Guidelines will be submitted to the UNSC for approval. An additional broad consultation will take place from December 2016 to February 2017 to receive feedback and comments on the draft Guidelines from NSOs. Comments received will be reflected either directly in the Guidelines shared with UNSC (if time permits), or will be compiled in a document attached to the Guidelines and incorporated after the Statistical Commission takes place in March 2017."

When do you expect the methodological work on this indicator to be completed?

Preliminary recommendation by end of 2016.

Are data and metadata already being collected from the National Statistical System for one or more components of this indicator?

No

How do you plan to collect the data?

Obtain data directly from country database/website

With what frequency is data expected to be collected?

Based on longitudinal analyses conducted on available datasets, no more frequently than 4 or 5 years. However, countries should decide whether a more frequent data collection is needed due to country specific peculiarities and legal reforms.

Is there a process of data validation by countries in place or planned for this indicator?

No

If you have any additional comments that you believe would be helpful to IAEG-SDG members in analysing the work plan and methodological development of the indicator, please provide them here:
Goal 5: Achieve gender equality and empower all women and girls

"Whereas no process of validation is foreseen yet, the suggestion is that:

1) At national level, the statistical authorities provide the metadata to evaluate the extent to which data have been collected following the international standard.

2) At international level, consistency with the international standard shall be assessed based on the information provided by countries."
Goal 5: Achieve gender equality and empower all women and girls

Target number: 5.c

Indicator Number and Name: 5.c.1 Percentage of countries with systems to track and make public allocations for gender equality and women’s empowerment

Agency: UN Women

Has work for the development of this indicator begun? Yes

Who are the entities, including national and international experts, directly involved and consulted in developing the methodology and/or data collection tools?

"UN Women in collaboration with UNDP and OECD is leading the process of developing the indicator. This SDG indicator builds on Indicator 8 “Number of countries that have a system for tracking allocations for gender equality and women’s empowerment” of the Global Partnership for Effective Development Cooperation that has been piloted and tested in 35 countries. The second round of monitoring is expected to also provide data to the Indicator 8 (in July/August 2016) that can be used to further inform a refined indicator methodology. A technical meeting will be held in early 2017 to discuss the methodology for this indicator and develop an appropriate survey instrument to collect data on this indicator. National and international experts, including experts from select countries with experiencing reporting on Indicator 8 will be invited to participate in this meeting."

What is the involvement of or how do you plan to involve National Statistical Systems in the development of the methodology?

Development of the indicator methodology will involve the National Statistical Systems in several ways. UN Women and its partners will invite selected National Statistical Offices, Women’s Ministries and the Ministry of Finance to provide comments and feedback on various inputs, including the design of the data request forms. Selected National Statistical Offices and/or other governmental agencies will be invited to participate in the Expert Group Meeting planned in 2017.

Please briefly describe the process of developing the methodology for the indicator

"Methodological development of this indicator will be supported by several activities: (a) UN Women will commission a discussion paper by a leading expert in the area of gender budgeting; (b) UN Women and its partners OECD and UNDP will solicit inputs from countries with experience in reporting on Indicator 8 of the Global Partnership for Effective Development Cooperation; (c) a series of regional consultations with national partners, including relevant Ministries, UN agencies, and independent experts will be conducted; (d) Development of data request forms for global reporting; and (f) Technical meetings, including an upcoming EGM meeting on the methodology of the indicator in first half of 2017."

Please indicate new international standards that will need to be proposed and approved by an intergovernmental process (such as UNSC) for this methodology.

Presentation of the proposed new international standard will be made to the IAEG-SDGs in the first quarter of 2018, followed by presentation to UNSC for endorsement.

When do you expect the methodological work on this indicator to be completed?

2017
Goal 5: Achieve gender equality and empower all women and girls

Are data and metadata already being collected from the National Statistical System for one or more components of this indicator?

Yes

If yes, please describe:

This SDG indicator builds on Indicator 8 “Number of countries that have a system for tracking allocations for gender equality and women’s empowerment” of the Global Partnership for Effective Development Cooperation that has been piloted and tested in 35 countries.

How do you plan to collect the data?

Send questionnaire(s) to country

With what frequency is data expected to be collected?

To be discussed during the EGM organized by UN Women in 2017.

Is there a process of data validation by countries in place or planned for this indicator?

No

If yes, please briefly describe:

Global monitoring for this indicator will use national data, as submitted by countries.

If you have any additional comments that you believe would be helpful to IAEG-SDG members in analysing the work plan and methodological development of the indicator, please provide them here:

"Adequate and effective financing is essential to achieve SDG 5 and the gender related targets across all of the SDG framework. By tracking and making public gender equality allocations, governments promote great accountability and transparency. The indicator encourages governments to put in place a system to track and make public resource allocations which can then inform policy review, better policy formulation and effective implementation for the achievement of SDG 5.

Gender Responsive Budgeting (GRB) is an approach that enables governments to comply with this indicator by integrating gender into government planning and budgeting processes. This entails examining not only allocations and expenditures but also budgeting systems and the roles of various actors throughout the process. GRB aims to enhance the quality and efficiency of public finance management by introducing aspects of equality and equity in public spending."
Goal 6: Ensure availability and sustainable management of water and sanitation for all

Goal 6

Target number: 6.3

Indicator Number and Name: 6.3.1 Proportion of wastewater safely treated

Agency: UNSD

Has work for the development of this indicator begun? Yes

Who are the entities, including national and international experts, directly involved and consulted in developing the methodology and/or data collection tools?

"UNSD - Environment Statistics Section
OECD
Eurostat

UNSD consults with OECD and Eurostat on the concepts and definitions, as well as on the structure and content of the respective questionnaires to promote harmonization of data at the international level. [see section 6.2.6]"

What is the involvement of or how do you plan to involve National Statistical Systems in the development of the methodology?

What is the involvement of or how do you plan to involve National Statistical Systems in the development of the methodology?

The methodology has already been developed for the related statistics contained in the UNSD/UNEP Questionnaire.

Please briefly describe the process of developing the methodology for the indicator

"This indicator uses underlying statistics with already accepted international concepts. Furthermore, the different types of treatment methods are defined in the International Recommendations for Water Statistics (IRWS). IRWS provides coherent principles, concepts and definitions for the collection and compilation of water statistics on a comparable basis.

The definitions of the types of treatment methods provided in IRWS are derived from the OECD/Eurostat Joint Questionnaire on Inland Waters. The UNSD/UNEP Questionnaire on Environment Statistics (water section) uses similar definitions.

The definition of wastewaster is also provided in the UNSD/UNEP Questionnaire."

Please indicate new international standards that will need to be proposed and approved by an intergovernmental process (such as UNSC) for this methodology.

As mentioned above, there is already an international standard (IRWS) for the definitions of the concepts used to produce the underlying statistics for this indicator.

When do you expect the methodological work on this indicator to be completed?

The methodology has already been developed for the related statistics contained in the UNSD/UNEP Questionnaire.
Goal 6: Ensure availability and sustainable management of water and sanitation for all

Are data and metadata already being collected from the National Statistical System for one or more components of this indicator?

Yes

If yes, please describe:

"UNSD Environment Statistics Section collects data from official national sources for water and waste statistics through its biennial UNSD/UNEP Questionnaire on Environment Statistics from non OECD/Eurostat countries. Data for OECD and Eurostat countries are collected through the biennial OECD/Eurostat Questionnaire that is consistent with the UNSD/UNEP Questionnaire, so data are comparable. The terms and definitions used in both the UNSD/UNEP Questionnaire and the OECD/Eurostat Questionnaire are mostly identical with those used by other sources, and where not, bridges or correspondence are developed where possible. For the number of responses to the UNSD/UNEP Questionnaire reference should be made to Part I of the Background Document to the Report of the Secretary-General on Environment Statistics (E/CN.3/2016/27) (http://unstats.un.org/unsd/statcom/47th-session/documents/BG-2016-27-EnvironmentStats-E.pdf)
The UNSD/UNEP Questionnaire separates urban wastewater treatment plants and other treatment plants, as well as wastewater treated in independent facilities. The definitions of primary, secondary and tertiary treatment are obtained from the International Recommendations for Water Statistics.

UNSD also collects data for the total wastewater generated through the UNSD/UNEP Questionnaire.

The statistics collected by UNSD through the UNSD/UNEP Questionnaire that can be used to produce this indicator are presented. The number of responses to the UNSD/UNEP Questionnaire for the year 2012 is in brackets for UNSD. It should be mentioned that UNSD included these statistics for the first time in the 2013 Questionnaire. So far the number of responses from countries has been very low due primarily to the lack of resources (human and financial), lack of capacity (technical, infrastructure for the actual wastewater treatment plants) and lack of data.

OECD/Eurostat also collects these statistics which are harmonized conceptually with those collected by UNSD therefore promoting internationally comparable data.

UNSD/UNEP Questionnaire Table W4

<table>
<thead>
<tr>
<th>Indicator</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>W4.1 Total wastewater generated (10 to UNSD + to ??? OECD/Eurostat)</td>
<td></td>
</tr>
<tr>
<td>W4.7 Wastewater treated in urban wastewater treatments plants (15 to UNSD + ??? to OECD/Eurostat)</td>
<td></td>
</tr>
<tr>
<td>W4.11 Wastewater treated in other treatments plants (5 to UNSD + ??? to OECD/Eurostat)</td>
<td></td>
</tr>
<tr>
<td>W4.15 Wastewater treated in independent treatment facilities (3 to UNSD + ??? to OECD/Eurostat)</td>
<td></td>

<tr>
<td>(W4.16 Non-treated wastewater) (11 to UNSD + ??? to OECD/Eurostat)</td>
<td></td>
</tr>
</tbody>
</table>

Indicator = (W4.7+W4.11+W4.15)/(W.1) or alternatively (W4.1-W4.16)/W4.1

How do you plan to collect the data?

Send questionnaire(s) to country, OECD and Eurostat from NSO and Ministry of Environment

With what frequency is data expected to be collected?
Goal 6: Ensure availability and sustainable management of water and sanitation for all

Data are already being collected every two years.

Is there a process of data validation by countries in place or planned for this indicator?

Yes

If yes, please briefly describe:

To promote data quality assurance UNSD carries out extensive data validation procedures that include built-in automated procedures, manual checks and cross-references to national sources of data. Communication is carried out with countries for clarification and validation of data. UNSD does not make any estimation or imputation for missing values so the number of data points provided are actual country data. Only data that are considered accurate or those confirmed by countries during the validation process are included in UNSD’s environment statistics database and disseminated on UNSD’s website.

If you have any additional comments that you believe would be helpful to IAEG-SDG members in analysing the work plan and methodological development of the indicator, please provide them here:

Data for the underlying statistics for this indicator are already collected from the countries (NSO and Ministry of Environment). However, it is important to reiterate that the data collection for these statistics has been started recently and that so far the response rate is very low. Moreover, there is no intention to increase the frequency of the UNSD/UNEP Questionnaire due to lack of resources and data, and the fact that the Questionnaire is aligned to that of OECD/Eurostat, which is also conducted every two years.
Goal 6: Ensure availability and sustainable management of water and sanitation for all

Target number: 6.3

Indicator Number and Name: 6.3.2 Proportion of bodies of water with good ambient water quality

Agency: United Nations Environment Programme (UNEP)

Has work for the development of this indicator begun? Yes

Who are the entities, including national and international experts, directly involved and consulted in developing the methodology and or data collection tools?

Experts from the GEMS/Water Global Programme Coordination Unit, Capacity Development Centre (University College Cork, Ireland) and Data Centre (Federal Institute of Hydrology, Koblenz, Germany) as well as the UNEP-DHI Centre and WHO Task Team are directly involved in the methodology development. Additionally, national experts from six GEMI proof-of-concept countries (Senegal, Jordan, Uganda, Peru, Netherlands and – foreseen - Bangladesh) are or will be consulted in testing and revising the methodology.

What is the involvement of or how do you plan to involve National Statistical Systems in the development of the methodology?

Representatives of the NSS are part of the national monitoring teams of the GEMI proof-of-concept testing and refining the methodology according to national capacities and organizational structures.

Please briefly describe the process of developing the methodology for the indicator

The methodology is based on a global water quality indicator previously developed by GEMS/Water that has been adapted to the concept of a monitoring ladder approach. This is meant to allow countries to monitor and report according to their respective capacities and step-wise improve monitoring and indicator reporting coverage as capacities evolve. The methodology is tested and refined through consultation with the GEMI proof-of-concept countries in 2016.

Please indicate new international standards that will need to be proposed and approved by an intergovernmental process (such as UNSC) for this methodology.

When do you expect the methodological work on this indicator to be completed?

End of 2016

Are data and metadata already being collected from the National Statistical System for one or more components of this indicator?

No

If yes, please describe:

N/A

How do you plan to collect the data?

- [x] Send questionnaire(s) to country
Goal 6: Ensure availability and sustainable management of water and sanitation for all

- x Obtain data directly from country database/website
- x Joint survey/compilation with national agency and international entity
- x Satellite images, remote sensing
- x Other: the main data source are nationally collected in situ water quality monitoring data which will be supplemented over time by remote sensing information where available and appropriate

If the indicator involves multiple components from different data sources, please describe how each individual component of the indicator will be collected here.

With what frequency is data expected to be collected?

On a yearly basis

Is there a process of data validation by countries in place or planned for this indicator?

Yes

If yes, please briefly describe:

Water quality data that institutions and line ministries provide to the NSS are expected to have undergone a national data validation process; data being made available to the UNEP Global Environment Monitoring System (GEMS/Water) Programme will undergo a QA/QC check by the Data Centre at the Federal Institute of Hydrology.

Please note:
Under the UN-Water umbrella, a joint and collaborative monitoring effort under the GEMI project (Monitoring Water and Sanitation in the 2030 Sustainable Development Agenda) has been established which involves relevant UN entities and aims to ensure coherence in implementation of global monitoring and reporting for SDG 6 (namely targets 6.3 to 6.6) including “ambient water quality” indicator 6.3.2.

Through the GEMI project an initial roll-out of the indicator is currently taking place in 6 Proof of Concept countries.

Indicator 6.3.2 is conceptually clear, has an established methodology, builds on international standards and many countries are collecting the required information albeit not always on a regular basis. Therefore UNEP and UN-Water consider the indicator to be in the position to either be in or to move up to the Tier 2 category.
Goal 6: Ensure availability and sustainable management of water and sanitation for all

Target number: 6.4

Indicator Number and Name: 6.4.1

Agency: FAO

Has work for the development of this indicator begun? Yes

Who are the entities, including national and international experts, directly involved and consulted in developing the methodology and or data collection tools?

The process is on-going in the context of the GEMI project “Integrated monitoring of water and sanitation related SDG targets”, carried out by seven UN agencies, i.e. FAO, UNEP, UNESCO, UN-HABITAT, WHO, WMO, UNICEF, under the umbrella of UN-Water. The consultation includes a proof-of-concept (POC) phase, involving six countries (Bangladesh, Jordan, Netherlands, Senegal, Peru, Uganda). Moreover, several international experts being part of the 6.4 Target Team are consulted on an ad-hoc basis, from the following additional entities: UNSD, University of Nebraska, University of Frankfurt, IGRAC, Eurostat, World Bank.

What is the involvement of or how do you plan to involve National Statistical Systems in the development of the methodology?

The national statistical offices are systematically involved in each POC country. They collaborate with the technical institutions to produce robust and reliable indicators and to include them into the national statistical system.

Please briefly describe the process of developing the methodology for the indicator

The development of the methodology for this indicator has been carried on for more than one year, including consultations with all the entities listed above. Attention has been given also to the reaction coming from the IAEG-SDG to the earlier versions of the methodology, in order to modify it accordingly. Metadata have been proposed and discussed since August 2015.

Please indicate new international standards that will need to be proposed and approved by an intergovernmental process (such as UNSC) for this methodology.

International standards exist for most of the parameters that will be used for the computation of the indicator. Technical methodology for the assessment of the output from rainfed agriculture needs to be established.

When do you expect the methodological work on this indicator to be completed?

The methodological work will be completed by the end of 2016.

Are data and metadata already being collected from the National Statistical System for one or more components of this indicator?

Yes

If yes, please describe:

The data are being collected with the National statistical Systems of the POC countries, as described above. The work just started and will be carried on until end 2016.
Goal 6: Ensure availability and sustainable management of water and sanitation for all

How do you plan to collect the data?

Send questionnaire(s) to country, Obtain data directly from country database/website, Joint survey/compilation with national agency and international entity, Satellite images, remote sensing

If the indicator involves multiple components from different data sources, please describe how each individual component of the indicator will be collected here.

Data on water withdrawal across sectors for the compilation of the indicator are available in FAO-AQUASTAT, UNSD and Eurostat. The estimation of the volumes of water withdrawn for energy production would be possible making several assumptions. Main sources of data for the gross value added by irrigated agriculture and industry are FAOSTAT and the World Bank database. Other sources include the World Energy Outlook of the International Energy Agency and the UNIDO database. Also, it is important to take into consideration transboundary water data issues for countries sharing the same river basin.

With what frequency is data expected to be collected?

Every 1 to 2 years

Is there a process of data validation by countries in place or planned for this indicator?

Yes

If yes, please briefly describe:

Countries are expected to put in place a process of Quality Control, Quality Assurance and data verification. The process should be carried out internally for the QC part, ensuring that all the planned steps are properly carried out at each round of data collection. The QA should be carried out by independent experts, either national or international, to assess the consistence and robustness of the data produced. Finally, where possible the resulting data should be verified by comparison with similar data from other sources.

If you have any additional comments that you believe would be helpful to IAEG-SDG members in analysing the work plan and methodological development of the indicator, please provide them here:

Indicator 6.4.1 is based on an estimation of the outcome gained from the utilization of a single unit of water volume. The proposed methodology allows to disaggregate the indicator per economic sector, offering a more flexible and detailed information to the decision makers. At the same time, the aggregated result allows an easy and immediate comparison of the indicator’s values over time, being also useful for comparison between countries where appropriate. Finally, the methodology implies the preparation of a number of base parameters, which would be also useful as stand-alone sub-indicators, as well as represent the basis for the preparation of eventual country specific supplementary indicators.
Goal 6: Ensure availability and sustainable management of water and sanitation for all

Target number: 6.5

Indicator Number and Name: 6.5.2 “Proportion of transboundary basin area with an operational arrangement for water cooperation”

Agency: UNESCO-IHP, UNECE

Has work for the development of this indicator begun? Yes

Who are the entities, including national and international experts, directly involved and consulted in developing the methodology and or data collection tools?

"Under the UN-Water umbrella, an integrated global monitoring initiative (www.unwater.org/gemi) was established in 2014 and together with the WHO/UNICEF JMP and WHO GLAAS, will be able to monitor global progress towards the entirety of SDG 6. As an inter-agency initiative, the initiative’s partners include UNEP, UN-Habitat, UNICEF, FAO, UNESCO, WHO and WMO. The consultation includes a proof-of-concept (POC) phase, involving six countries (Bangladesh, Jordan, Netherlands, Senegal, Peru, Uganda).

The methodology has been developed by a working group dedicated to the two indicators of target 6.5, with representatives of different UN agencies (UNECE, UNESCO, UNEP, UNDP, WHO) and other organizations (GWP). In particular UNECE and UNESCO-IHP have coordinated the work for indicator 6.5.2.

Feedback on the proposed methodology has been obtained from a number of experts specialized on transboundary water cooperation from the UNESCO-IHP and UNECE networks and by country officials. The methodology is currently tested under the UN-Water GEMI initiative (see “general comments” section).

Regarding data collection tools, the reporting under the Convention on the Protection and Use of Transboundary Watercourses and International Lakes (Water Convention), serviced by UNECE and supported by UNESCO, will represent the main data collection mechanism."

What is the involvement of or how do you plan to involve National Statistical Systems in the development of the methodology?

National Statistical Systems of the selected countries have been involved in the testing of methodologies of indicators of the target, including 6.5.2, through the GEMI initiative. The national statistical offices are systematically involved in each POC country. They collaborate with the technical institutions to produce robust and reliable indicators and to include them into the national statistical system.

Please briefly describe the process of developing the methodology for the indicator

"The main process in terms of work of experts has been described in the answer to question 6.2.1: namely the interagency coordination in the framework of UN Water, led by UNECE and UNESCO for the proposal development, the iterations improving it based on the feedback received from experts and national representatives and the foreseen further improvement based on the future results of the testing through the GEMI project.

Regarding the content of the methodology, the elements of the indicator are

1) for spatial information on transboundary surface water basins and aquifers based on physical observation/surveying and measurement and relatively fixed although the precision may vary (especially on aquifers), and
Goal 6: Ensure availability and sustainable management of water and sanitation for all

2) (for operationality of cooperation arrangement) based on the main principles of customary international water law, also contained in the two UN conventions - Convention on the Law of the Non-navigational Uses of International Watercourses (New York, 1997) and the UNECE Convention on the Protection and Use of Transboundary Watercourses and International Lakes (Water Convention) (Helsinki, 1992) – as well as the draft Articles on The Law of Transboundary Aquifers (2008; UN General Assembly resolutions 63/124 and 66/104)."

Please indicate new international standards that will need to be proposed and approved by an intergovernmental process (such as UNSC) for this methodology.

"No new international standard will need to be approved. International standards and/or methodologies, or underpinning norms are already available for the data components upon which the methodology has been developed for indicator 6.5.2. The elements of the indicator are based on the main principles of customary international water law, also contained in the two UN conventions - Convention on the Law of the Non-navigational Uses of International Watercourses (New York, 1997) and the UNECE Convention on the Protection and Use of Transboundary Watercourses and International Lakes (Helsinki, 1992) – as well as the draft Articles on The Law of Transboundary Aquifers (2008; UN General Assembly resolutions 63/124 and 66/104)."

When do you expect the methodological work on this indicator to be completed?

The testing of indicator 6.5.2 is currently on-going in six countries together with other indicators for SDG 6 on water. The pilot testing is expected to be completed in October/November 2016, with revised and final methodology ready for roll-out in March 2017.

Are data and metadata already being collected from the National Statistical System for one or more components of this indicator?

Yes

If yes, please describe:

The data and information necessary for defining the indicator value is in most cases already available at the country level in ministries and agencies responsible for water resources.

How do you plan to collect the data?

Send questionnaire(s) to country, Joint survey/compilation with national agency and international entity

If the indicator involves multiple components from different data sources, please describe how each individual component of the indicator will be collected here.

"A first main component is spatial information (“transboundary basin area”). It is based on physical measurement and is usually available in ministries in charge of water resources. The value of this component is relatively fixed although the precision may vary (especially on aquifers), and may require only limited update on the basis of improved knowledge. Regarding operationality of arrangement the information needed for calculating the indicator can be directly obtained from information from administrative records (Member States have records of cooperation arrangements)."
Goal 6: Ensure availability and sustainable management of water and sanitation for all

In both cases, the Member States have the most up-to-date information, which can be supplemented by the data from various international projects and inventories, which contribute to establishing a baseline globally. These sources contributing to the baseline assessment include, for existing agreements, the International Freshwater Treaties Database (http://www.transboundarywaters.orst.edu/publications/atlas/index.html), maintained by Oregon State University (OSU); For organizations for transboundary water cooperation: International River Basin Organization (RBO) Database (http://www.transboundarywaters.orst.edu/research/RBO/index.html). Data are available at global level on the 120 international river basin organisations.

Spatial data (delineating transboundary basins) are available for all currently known 286 surface water basins and 592 transboundary aquifers. On spatial information: for aquifer delineations - Based on project activities the UNESCO Internationally Shared Aquifer Resources Management Programme (ISARM, http://isarm.org/) data base is populated on data on transboundary aquifers (https://gis.un-igrac.org/); for basin extent and boundaries - Transboundary Waters Assessment Programme (TWAP; http://www.geftwap.org/); assessments under the UNECE Water Convention

Reporting under the UNECE Water Convention will regularly gather through a questionnaire sent to national authorities responsible for transboundary water cooperation information needed for the calculation of indicator 6.5.2, especially on the cooperation arrangements, transboundary waters covered by them as well asoperationality of cooperation arrangements. The Convention’s regular reporting on transboundary water cooperation, involves both Parties and non-Parties to the Convention and the questionnaire covers transboundary rivers, lakes and groundwaters. In addition, regional assessments describing transboundary cooperation, inventorying agreements and presenting also spatial data have also been undertaken under the Convention and will continue to be carried out on a regular basis."

With what frequency is data expected to be collected?

The reporting under the Water Convention will be piloted in 2016-2017. The questionnaire will be reviewed, also to take into account the need to track progress vis-à-vis indicator 6.5.2, and the reporting will be replicated every three years.

Is there a process of data validation by countries in place or planned for this indicator?

Yes

If yes, please briefly describe:

"Data collected will be produced by the countries, with the support of the international organizations that will have proposed rules to get access / produce the data (as explained in answer to “data collection” question above), which implies the data is already validated. In case international database and inventories are used, especially for baseline assessment, these already count with the involvement of countries. For instance, data on transboundary aquifers is obtained through the initiatives of the UNESCO Intergovernmental International Hydrological Programme (IHP), which is an intergovernmental programme with 168 Member States. The IHP National Committees work closely with the headquarters and UNESCO focal points at national and regional level to develop action and on data collection. However, the processes of validation would require exactly the same involvement from the country as the calculation of the indicators, which is simple and based on readily available information. Thus, the
Goal 6: Ensure availability and sustainable management of water and sanitation for all

best way to obtain validated data is to encourage the countries to calculate the indicator using the available guidance on the methodology and report it. Moreover, information gathered from the national reports under the Water Convention is officially submitted and therefore already validated.

The Water Convention will also offer a framework for intergovernmental discussions, including data validation, on the progress in indicator 6.5.2 at different levels, from the national, to the basin, regional and global."

If you have any additional comments that you believe would be helpful to IAEG-SDG members in analysing the work plan and methodological development of the indicator, please provide them here:

Under the UN-Water umbrella, a joint and collaborative monitoring effort has been established which involves all relevant UN entities and ensures coherence in implementation of global monitoring and reporting for SDG 6 in its entirety. Through this initiative an initial roll-out of SDG 6 indicators is currently taking place in 6 countries. To find out more about the integrated monitoring of water and sanitation related SDG targets, see www.unwater.org/gemi.

The indicators proposed for SDG 6 are conceptually clear, have an established methodology, build on international standards and many countries are already collecting the required information on a regular basis. Further information on methodology for all of SDG 6 indicators can be found in the UN-Water metadata compilation: [http://bit.ly/28N7Ef8](http://bit.ly/28N7Ef8).

In order to provide clarifications and fulfil gaps in information needed for the workplan, especially in regard to:

- The necessary steps for calculating the indicator value using spatial data and administrative information are spelled out clearly and in detail.
- The objective criteria (based on customary international law) for assessing whether the cooperation arrangement referred to in the indicator definition can be considered “operational” is detailed.
- The sources of data are explained more extensively.

Goal 6: Ensure availability and sustainable management of water and sanitation for all

Target number: 6.6

Indicator Number and Name: 6.6.1 Change in the extent of water-related ecosystems over time

Agency: UNEP

Has work for the development of this indicator begun?

Yes

Who are the entities, including national and international experts, directly involved and consulted in developing the methodology/and or data collection tools?

UNEP (lead); CBD, Ramsar, IUCN and IWMI.

Under the UN-Water umbrella, an integrated global monitoring initiative (www.unwater.org/gemi) was established in 2014 and together with the WHO/UNICEF JMP and WHO GLAAS, will be able to monitor global progress towards the entirety of SDG 6. As an inter-agency initiative, the initiative’s partners include UNEP, UN-Habitat, UNICEF, FAO, UNESCO, WHO and WMO.

Methodology development for each SDG 6 target is led by a Target Team, and for 6.6 the Target Team is led by UNEP (chair) and also includes CBD, Ramsar, IUCN and IWMI. Integrated monitoring is currently being pilot tested in six countries: Senegal, Peru, Jordan, Uganda, Bangladesh and the Netherlands. National working groups have been established in these countries to support the development of the methodology in a consultative process.

What is the involvement of or how do you plan to involve National Statistical Systems in the development of the methodology?

The National Statistical Offices of the six countries are all invited to the inception workshops and will be involved in the pilot testing of methodologies for SDG indicators, including 6.6.1.

Please briefly describe the process of developing the methodology for the indicator

A draft methodology has been developed by a global target team (see 6.2.1 above) and is currently being pilot tested in six countries as described above.

Please indicate new international standards that will need to be proposed and approved by an intergovernmental process (such as UNSC) for this methodology.

The proposed draft methodology aligns with classifications of water related ecosystems as agreed by CBD and RAMSAR

When do you expect the methodological work on this indicator to be completed?

The pilot testing is expected to be completed in October/November 2016, with revised and final methodology ready for roll-out in March 2017.
Goal 6: Ensure availability and sustainable management of water and sanitation for all

Are data and metadata already being collected from the National Statistical System for one or more components of this indicator?

Yes

If yes, please describe:

This indicator tracks changes over time in the extent of water-related ecosystems. It uses the imminent date of 2020 in order to synchronise with the Aichi Targets of the Convention of Biodiversity but will continue beyond that date to synchronise with the rest of the SDG Targets set at 2030. The ecosystems included are the wetlands described by the Ramsar Convention (Ramsar, 1971) as “‘areas of marsh, fen, peatland or water, whether natural or artificial, permanent or temporary, with water that is static or flowing, fresh, brackish or salt, including areas of marine water the depth of which at low tide does not exceed six metres’”. Also included is groundwater. Accordingly the indicator methodology seeks to include the following ecosystem categories: wetlands (swamps, marshes and peatlands), open water (rivers and estuaries, lakes, coastal waters and reservoirs), and groundwater aquifers.

Three principle sub-indicators describing aspects of these ecosystems are monitored to describe the extent:

- Their spatial extent
- The quantity of water contained within these ecosystems
- The health or state of these ecosystems

How do you plan to collect the data?

- X Send questionnaire(s) to country
- X Obtain data directly from country database/website
- X Joint survey/compilation with national agency and international entity
- X Satellite images, remote sensing

If the indicator involves multiple components from different data sources, please describe how each individual component of the indicator will be collected here.

The indicator will track changes over time in the extent of water related ecosystems such as wetlands, rivers, lakes and reservoirs, estuaries and groundwater. A combination of earth observation and ground-based data will be applied. For each of the ecosystem types, standard methods exist. Combining these metrics into one indicator is the novel element that has been developed.

Three principle aspects of these ecosystems are monitored to describe the extent:

§ Their spatial extent
§ The quantity of water contained within these ecosystems
§ The health or state of these ecosystems

These are also linked to water quality as collected by 6.3.2

There are a number of international organisations and projects with abundant literature that describes the data, the collection of data and the processing of this data to achieve the objective of measuring the change in extent of water-related ecosystems. The collection of data is possible through the collaboration of international and national institutions (UNEP (GEMS Water); WCMC; Biodiversity Indicators Partnership – Ramsar, Convention on Biological Biodiversity; Convention on Combatting Desertification; GEO/GEOSS, NASA, GRDC), provide the networks required. Ramsar Parties will in addition be required to report (for each COP, every 3 years, starting in 2017) if they have a national wetlands inventory, on the extent in km² of the total wetlands surface.
Goal 6: Ensure availability and sustainable management of water and sanitation for all

With what frequency is data expected to be collected?

Every two to three years is a realistic frequency for updating the indicator information.

Is there a process of data validation by countries in place or planned for this indicator?

Yes

If yes, please briefly describe:
Several of the components of the indicator such as spatial extent and volume of water stored in lakes and wetlands are collected and regularly validated by national water authorities. For the earth observations that will be used for the compilation of the indicator national ground verification programmes are planned.

Please note:
Under the UN-Water umbrella, a joint and collaborative monitoring effort has been established which involves all relevant UN entities and ensures coherence in implementation of global monitoring and reporting for SDG 6 in its entirety. Through this initiative an initial roll-out of SDG 6 indicators is currently taking place in 6 countries. To find out more about the integrated monitoring of water and sanitation related SDG targets, see [www.unwater.org/gemi](http://www.unwater.org/gemi).

The indicators proposed for SDG 6 are conceptually clear, have an established methodology, build on international standards and many countries are already collecting the required information on a regular basis. Further information on methodology for all of SDG 6 indicators can be found in the UN-Water metadata compilation: [http://bit.ly/28N7Ef8](http://bit.ly/28N7Ef8).
Goal 7: Ensure access to affordable, reliable, sustainable and modern energy for all

Goal 7

Target number: 7.b

Indicator Number and Name: 7.b.1 Investments in energy efficiency as a percentage of GDP and the amount of foreign direct investment in financial transfer for infrastructure and technology to sustainable development services

Agency: IEA

Has work for the development of this indicator begun? Yes, the IEA has started work to define a methodology on how to measure energy efficiency investment, and is interested in developing a plan for it to be brought to international standards, together with other interested international partners.

Who are the entities, including national and international experts, directly involved and consulted in developing the methodology and/or data collection tools?

What is the involvement of or how do you plan to involve National Statistical Systems in the development of the methodology?

Please briefly describe the process of developing the methodology for the indicator
The IEA recently published a World Energy Investment; and the Energy Efficiency Market Report has been for a few years exploring energy efficiency investment; it is on the basis of the work already done that the IEA will be developing and refining this methodology. http://www.iea.org/bookshop/731-World_Energy_Investment_2016 http://www.iea.org/publications/freepublications/publication/medium-term-energy-efficiency-market-report-2016.html

Please indicate new international standards that will need to be proposed and approved by an intergovernmental process (such as UNSC) for this methodology.

When do you expect the methodological work on this indicator to be completed?

Are data and metadata already being collected from the National Statistical System for one or more components of this indicator? No
Goal 8: Promote sustained, inclusive and sustainable economic growth, full and productive employment and decent work for all

Goal 8

Target number: 8.4 and 12.2

Indicator Number and Name:
8.4.1/12.2.1 Material footprint (MF) and MF per capita, per GDP
8.4.2/12.2.2 Domestic material consumption (DMC) and DMC per capita, per GDP

Agency: UNEP

Has work for the development of this indicator begun?

Yes. UNEP is publishing a global material flow dataset which includes the MF and DMC. The database is part of the work of the Global Material Flows working group of the International Resource Panel (IRP). The database covers 180 nations, over a time period of 40 years (1970-2010). Data is available at the UNEP online data platform UNEP Live www.uneplive.unep.org on each country page in the section ‘UNEP resources’ under the category ‘natural resources’.

Material Flows Accounting is a well-established methodology with a strong conceptual basis in physical accounting and economics. Although, UNEP does have time series data for many countries. More needs to be done to build the capacity of countries to compile material flow accounts, to report data and to be able to validate the existing data. UNEP proposes a two-pronged approach to capacity building: enhancing the accounting capabilities for DMC and MF within countries, while at the same time supporting the UNEP IRP in continuing to update the global database and encouraging countries to verify and adopt the dataset made available by UNEP to fill the gap until capacity is available in all regions and countries.

Who are the entities, including national and international experts, directly involved and consulted in developing the methodology and or data collection tools?

UNEP, along with the EU, OECD and UNSD, are involved in this work. CISRO is also involved. The members of the IRP are also involved in developing the methodology and reviewing the database.

1) From UNEP: the 10YFP secretariat (contact people: Charles Arden-Clarke, Charles.arden-clarke@unep.org; Cecilia Lopez y Royo, Cecilia.lopezyrovo@unep.org) and UNEP-DEWA (Jillian Campbell jillian.campbell@unep.org)
2) From UNSD: The Economic Statistics Branch (Alessandra Alfieri, alfieri@un.org)
3) From EU: Statistical Office of the European Communities (Anton Steurer, Anton.Steurer@ec.europa.eu)
4) From OECD: Environment Directorate (Myriam Linster, Myriam.LINSTER@oecd.org)
5) From CSIRO: Heinz Schandl, Heinz.Schandl@csiro.au
6) Members of the IRP

What is the involvement of or how do you plan to involve National Statistical Systems in the development of the methodology?
Goal 8: Promote sustained, inclusive and sustainable economic growth, full and productive employment and decent work for all

National Statistical Offices are often responsible for the compilation of Material Flow Accounts. UNEP plans to work with the IRP to develop a global guidance document for material flow accounts (based on the Eurostat compilation guide). This approach will be piloted in countries outside of the EU and Japan. UNEP plans to also use the UNCEEA as a forum for discussing methodological issues and facilitating peer review.

Please briefly describe the process of developing the methodology for the indicator

The methodology has already been developed; however, more needs to be done in terms of making the methodology more accessible to all countries and in building capacity in countries and incorporating the views of countries with less developed statistical systems into the methodology.

Deliverables
Improved methodologies for countries (including less developed statistical systems)
By June 2017: A guidance document which simplifies the current EUROSTAT methods guides, and makes it more relevant for countries outside of the EU, (notably those which have economies where resource extraction sectors are more prominent). (Aligned with the SEEA framework.)
June 2017-June 2018: Piloting in countries
By June 2018: Review of the methodologies

Global database
By end 2017: Update and extension of the current UNEP material flow and resource productivity database in time for reporting to UNEA-3 in 2017.

Please indicate new international standards that will need to be proposed and approved by an intergovernmental process (such as UNSC) for this methodology.

It is likely that UNEP would be interested in seeking approval from the UNSC of the methodology. (Or at least the methodology should be brought up for discussion at the UNSC – probably in 2018.)

When do you expect the methodological work on this indicator to be completed?

By 2020

Are data and metadata already being collected from the National Statistical System for one or more components of this indicator?

Yes

If yes, please describe:

The EU member countries and Japan report material flow accounts which are directly used in the UNEP database. For countries in Asia and the Pacific, Latin America and the Caribbean and Eastern Europe, Caucasus and Central Asia, UNEP has constructed material flow accounts using data available in global databases (primarily, global databases which include official national data are utilized, including the UN COMTRADE database, the UN National Accounts database, FAO database and the IEA database; however, some non-official sources of data are also used, such as the United States Geological Services data and British Geological Survey). For Africa, UNIDO has pioneered material flow accounting using methodology consistent with the methodology that UNEP has employed.

How do you plan to collect the data?
Goal 8: Promote sustained, inclusive and sustainable economic growth, full and productive employment and decent work for all

Through the work of the IRP which includes data submitted by and collected from countries.

If the indicator involves multiple components from different data sources, please describe how each individual component of the indicator will be collected here.

UNEP will continue to utilise the existing official databases maintained by UNSD and others. It is not practical to send questionnaires to countries to request duplicate information which they are already providing to the UN System.

With what frequency is data expected to be collected?

Annually; however, the database will only be updated every few years up until 2020.

Is there a process of data validation by countries in place or planned for this indicator?

Through the IRP there is a validation process; however, the process for involving each country will be determined subsequently.

If yes, please briefly describe:
Goal 9: Build resilient infrastructure, promote inclusive and sustainable industrialization and foster innovation

Goal 9

Target number: 9.1

Indicator Number and Name: 9.1.1 Share of the rural population who live within 2 km of an all-season road

Agency: World Bank

Has work for the development of this indicator begun? Yes

Who are the entities, including national and international experts, directly involved and consulted in developing the methodology and/or data collection tools?

Experts from the World Bank have developed the approach, in collaboration with DFID (Department for International Development), UK.

What is the involvement of or how do you plan to involve National Statistical Systems in the development of the methodology?

The World Bank will publish a detailed report assessing data sources, methodology, robustness, correlation with poverty, etc. of this indicator. It will invite National Statistical System, other country partners, and international community to scrutinize the approach.

Please briefly describe the process of developing the methodology for the indicator

The World Bank with support from the Research for Community Access Partnership (ReCAP) funded by the Department for International Development (DFID) of the United Kingdom has worked to develop a new methodology to measure rural access, which is sustainable, consistent, simple and operationally relevant. Although it is conceptually the same as an earlier indicator of the same name (i.e., “Share of the population who live within 2 kilometers of the nearest road in “good condition” in rural areas”), the new method uses new spatial data and techniques.

Please indicate new international standards that will need to be proposed and approved by an intergovernmental process (such as UNSC) for this methodology.

The methodology of the indicator will need to be vetted in its entirety by the IAEG-SDG.

When do you expect the methodological work on this indicator to be completed?

The methodology will be published in the next few months.

Are data and metadata already being collected from the National Statistical System for one or more components of this indicator?

No

How do you plan to collect the data?

Obtain data directly from country database/website, Joint survey/compilation with national agency and international entity, Satellite images, remote sensing, Line ministries and Road Agencies are consulted to obtain (georeferenced) information on road conditions.
Goal 9: Build resilient infrastructure, promote inclusive and sustainable industrialization and foster innovation

With what frequency is data expected to be collected?

The underlying data necessary to carry out the analysis is expected to be updated by road agencies every 3 to 5 years.

Is there a process of data validation by countries in place or planned for this indicator?

No

If you have any additional comments that you believe would be helpful to IAEG-SDG members in analysing the work plan and methodological development of the indicator, please provide them here:

The Rural Access Index (RAI) is a well-defined development indicator in the transport sector. It measures the share of people who live in 2km distance from an all-season road (see Roberts et al. (2006) “Rural Access Index: A Key Development Indicator” Transport Papers No. 10). The World Bank is currently working on establishing a new method to measure this index with new global spatial data and GIS techniques used. The definition remains broadly the same, although the way of measuring road condition is slightly changed because the new method uses different sources of data. It measures the share of rural people who live within 2 km of a road in good condition. With 8 pilot countries (Ethiopia, Kenya, Mozambique, Tanzania, Uganda, Zambia, Nepal and Bangladesh) tested, the proposed method has been confirmed to be robust and implementable. All technical details will be available in the forthcoming report “Measuring Rural Access: Using new technologies” by the World Bank, which will be published by July-August 2016. The developed methodology is planned to be rolled out to other 30 countries in the next two Fiscal Years of the World Bank (July 2016-June 2018).
Goal 9: Build resilient infrastructure, promote inclusive and sustainable industrialization and foster innovation

Target number: 9.3

Indicator Number and Name: 9.3.1 Proportion of small-scale industries in total industry value added

Agency: UNIDO

Has work for the development of this indicator begun? Yes

Who are the entities, including national and international experts, directly involved and consulted in developing the methodology and/or data collection tools?

"NSOs
UNIDO, OECD, World Bank, UNCDF among international agencies"

What is the involvement of or how do you plan to involve National Statistical Systems in the development of the methodology?

We have proposed that IAEG-SDG forms a small task force including representatives of around 7 NSOs and International agencies (such as UNIDO, WB, OECD, UNSD) which could work out employment-based size class for the purpose global monitoring.

Please briefly describe the process of developing the methodology for the indicator

"There is no need of developing new methodologies for data collection tools. Both data and methodology exists.

There are two main issues:

1. International data reporting by size class categories
2. Common definition of size class for small industries based on statistical measures"

Please indicate new international standards that will need to be proposed and approved by an intergovernmental process (such as UNSC) for this methodology.

A recommendation on the size class to be classified under "Small"

When do you expect the methodological work on this indicator to be completed?

2017

Are data and metadata already being collected from the National Statistical System for one or more components of this indicator?

No

If yes, please describe:

UNIDO has been collecting data from NSOs on activities of industrial establishments. However, these data are not dis-aggregated by the size class categories such as large and small. The current data collection programme of UNIDO, which was endorsed by UNSC many years ago, does not envisage collecting data separately for small industries. Therefore no international reporting system exists.
Goal 9: Build resilient infrastructure, promote inclusive and sustainable industrialization and foster innovation

When do you expect work to begin on developing a methodology and with which partners will your organisation work?

As soon as IAEG-SDG makes decision on size class definition

How do you plan to collect the data?

Send questionnaire(s) to country, Obtain data directly from country database/website, Joint survey/compilation with national agency and international entity

With what frequency is data expected to be collected?

Annual

Is there a process of data validation by countries in place or planned for this indicator?

Yes

If yes, please briefly describe:

NSOs collect and produce data through their established system

If you have any additional comments that you believe would be helpful to IAEG-SDG members in analysing the work plan and methodological development of the indicator, please provide them here:

"There are two kinds of definition of small 1) classification of small for policy, taxation/subsidies purpose 2) for statistical purpose.

It will be difficult to harmonize policy related definition of small, so we need to agree on a statistical measure for the purpose of SDG monitoring."
Goal 9: Build resilient infrastructure, promote inclusive and sustainable industrialization and foster innovation

**Target number:** 9.3

**Indicator Number and Name:** 9.3.2 Proportion of small-scale industries with a loan or line of credit

**Agency:** UNIDO

**Has work for the development of this indicator begun?** Yes

**Who are the entities, including national and international experts, directly involved and consulted in developing the methodology/and or data collection tools?**

"Kindly refer to the information provided for Indicator 9.3.1

Answers to all subsequent questions are identical. "

84
Goal 10: Reduce inequality within and among countries

Goal 10

Target number: 10.2

Indicator Number and Name: 10.2.1 Proportion of people living below 50 per cent of median income, disaggregated by age group, sex and persons with disabilities

Agency: World Bank

Has work for the development of this indicator begun? No

When do you expect work to begin on developing a methodology and with which partners will your organisation work?

We are currently discussing how to proceed on this.

How do you plan to collect the data?

This indicator will use the exact same data as used in indicator 1.1.1 (Proportion of population below the international poverty line, by sex, age, employment status and geographical location (urban/rural)) and indicator 10.1.1 (Growth rates of household expenditure or income per capita among the bottom 40 per cent of the population and the total population).

With what frequency is data expected to be collected?

Can be the same as indicators 1.1.1 and 10.1.1

Is there a process of data validation by countries in place or planned for this indicator?

Yes

If yes, please briefly describe:

Can be the same as indicators 1.1.1 and 10.1.1

If you have any additional comments that you believe would be helpful to IAEG-SDG members in analysing the work plan and methodological development of the indicator, please provide them here:

This indicator would use the same underlying data for monitoring SDG indicators 1.1.1 and 10.1.1. However, the methodology needs to be developed and the possibility of this is being discussed.
Goal 10: Reduce inequality within and among countries

Target number: 10.3 and 16.b

Indicator Number and Name: 16.b.1 and 10.3.1 - Proportion of population reporting having personally felt discriminated against or harassed in the previous 12 months on the basis of a ground of discrimination prohibited under international human rights law

Agency: OHCHR

Has work for the development of this indicator begun? Yes

Who are the entities, including national and international experts, directly involved and consulted in developing the methodology/and or data collection tools?

"UN organizations/entities: Office of the High Commissioner for Human Rights, United Nations Office on Drugs and Crimes, UN Women

Members of the Praia working group on indicator 16.b.1: - Independent Researcher (New York University/Congo Research) – Francesca Bomboko; Departamento Administrativo Nacional de Estadística (Colombia) - Diana Carolina Nova Laverde; French Institute of Research for Development – François Roubaud; INEGI México – Oscar Jaimes Bello, Adrián Franco Barrios, García Velazquez María del Pilar; Institut National de la Statistique du Niger - Amadou Garba Halimatou; Statistiques Tunisie - Lotfi Hrizi, Nadia Touihri; OECD - Marco Mira D’Ercole; Palestinian Central Bureau of Statistics – Khalid Abu Khalid; Bureau of Justice Statistics (U.S. Department of Justice) – Allen Beck; Statistics South Africa - Isabelle Schmidt; UN Women – Sara Duerto Valero

Other potentially involved organizations/entities include: European Union Fundamental Rights Agency; Focal points of national statistical offices of the United Nations Survey of Crime Trends and Operations of the Criminal Justice System; other experts that will be identified later

In terms of consultative process, OHCHR started consulting organizations and experts on a bilateral basis. OHCHR participated in the UNODC meeting of Global Focal Points of the Surveys on Crime Trends and Operations of the Criminal Justice System (UN-CTS) in May 2016. One of the recommendations was adding questions on experience/perception of discrimination to the existing section on victimization survey to take advantage of the existing annual data collection through identified and active focal points in each country. Among other things, the discussion highlighted comparability issues and needs for more targeted sampling frame to capture the different grounds of discrimination. The process envisaged for developing the indicator and its methodology will be further discussed during a first meeting of the Praia Working Group (see above members list) in Paris, 4-6 July 2016."

What is the involvement of or how do you plan to involve National Statistical Systems in the development of the methodology?

"National statistical systems will be involved in the development of the methodology in the context of the work and consultations organized within the Praia Group framework and in the context of other relevant consultations on country level work and experience in implementing victimization surveys and other data collections relevant to the compilation of the indicator. Among the issues to be addressed in the context of this work, we can mention for instance:

- measurement of experience versus perception of discrimination and related validity and comparability issues;
- Use of specialized discrimination surveys versus discrimination modules within a general or other purpose survey;
- Surveying/accessing population groups who may be marginalized and/or at risk of discrimination;
Goal 10: Reduce inequality within and among countries

- Guaranteeing implementation of human rights and statistical standards in data collection work.

Based on a mapping of national, regional and international surveys on measurement of discrimination (as stand-alone applications or as a part of victimization or general purpose surveys), representatives of national statistical systems will be consulted on above mentioned as well as additional related issues, such as: grounds and areas of discrimination covered; cognitive testing; screening and sampling techniques; inclusion of ‘hard to reach’ / potentially ‘left behind’ group; training of interviewers; and capacity building at country level.

Please briefly describe the process of developing the methodology for the indicator

"As mentioned above, a first meeting of the Praia working group created to work on this indicator will be held in Paris on 4-6 July 2016. The meeting will provide an opportunity to discuss with partners and experts, including representatives from national statistical systems, about respective work and data collection, and identify definitional, methodological and practical issues to be considered. The meeting will help specify further the process to be followed for developing the methodology. Based on the results of the Praia meeting, it is envisaged to:

- conduct an in-depth technical review of the methodologies currently applied by national statistical systems to measure experience/perception of discrimination, their compatibility with the proposed SDG indicator and suitability for global reporting;
- convene follow-up expert consultations, in coordination with Group Praia to discuss the main findings of the methodological overview of surveys on experience/perception on discrimination;
- based on conclusions and recommendations of these follow-up consultations, develop guidance for producing harmonized statistics on experience/perception of discrimination relevant to the compilation of indicator 16.b.1;
- Support, through capacity building, the implementation and integration of the developed module/questionnaire on the experience/perception of discrimination in existing or new country population surveys.
- Report on indicator 16.b.1 building on existing data collection and exchange programmes at national, regional and international level"

Please indicate new international standards that will need to be proposed and approved by an intergovernmental process (such as UNSC) for this methodology.

The methodology to be developed will rely and build primarily on existing international legal and statistical standards, including human rights law and the International Classification of Crimes for Statistical Purposes (ICCS). If new international standards will have to be developed (none are currently anticipated), they will be proposed to the UNSC through the Praia Group, and if applicable, through the mechanisms overseeing the ICCS.

When do you expect the methodological work on this indicator to be completed?

Towards the end of 2018 (depending on scope of methodology)

Are data and metadata already being collected from the National Statistical System for one or more components of this indicator?

Yes
Goal 10: Reduce inequality within and among countries

If yes, please describe:

Some national statistical systems and regional organizations are collecting data for some of the components of this indicator (i.e. specific grounds of discrimination such as gender, age, indigenous, migrants, etc.). OHCHR has started a mapping of initiatives applied to measure experience/perception of discrimination, their compatibility with the proposed SDG indicator and suitability for global reporting. The main findings and preliminary recommendations from this technical review will be presented to an expert meeting. For the list of organizations and experts, see response to 6.2.1.

How do you plan to collect the data?

Joint survey/compilation with national agency and international entity

With what frequency is data expected to be collected?

Annually

Is there a process of data validation by countries in place or planned for this indicator?

Yes

If yes, please briefly describe:

At this stage, we are not in the position to describe the process of data validation that will be followed, but this will be discussed in due course within the Praia Group and with national statistical systems representatives which will be responsible for implementing the envisaged population surveys.
Goal 10: Reduce inequality within and among countries

Target number: 10.5

Indicator Number and Name: 10.5.1 Financial Soundness Indicators (FSIs)

Agency: IMF

Has work for the development of this indicator begun? Yes

Who are the entities, including national and international experts, directly involved and consulted in developing the methodology and/or data collection tools?

The methodology underlying the compilation of these indicators was developed by the IMF in 2006. An extensive compilation guide was completed in 2006 to assist the compilers. This work was informed by consultation with experts from other international agencies (including the Bank for International Settlements), standard setting bodies, and IMF member countries.

What is the involvement of or how do you plan to involve National Statistical Systems in the development of the methodology?

The IMF extensively collaborated with central banks and banking supervisory agencies in member countries to develop the FSI methodology.

Please briefly describe the process of developing the methodology for the indicator

The methodology outlined in the FSI Compilation Guide is the outcome of sustained collective efforts that began in 1999, when the IMF launched its FSIs initiative and convened the first meeting of a reference group of FSI experts (FSIRG) from international/regional institutions and a broad range of countries for that purpose. Throughout the process of developing and fine-tuning these indicators, the IMF has reached out to and extensively consulted with the FSIRG and national authorities.

When do you expect the methodological work on this indicator to be completed?

This work was completed in 2006

Are data and metadata already being collected from the National Statistical System for one or more components of this indicator?

Yes

If yes, please describe:

Central bank and supervisory agencies in member countries compile and report the data to the IMF for publication on its external website.

How do you plan to collect the data?

Regular reporting forms

With what frequency is data expected to be collected?

Quarterly, etc.

Is there a process of data validation by countries in place or planned for this indicator?

Yes
Goal 10: Reduce inequality within and among countries

If yes, please briefly describe:

The authorities review the data before submitting them to the IMF. Upon receiving the data, the IMF performs additional validation tests.

If you have any additional comments that you believe would be helpful to IAEG-SDG members in analysing the work plan and methodological development of the indicator, please provide them here:

Out of 40 FSIs, the IMF suggests to use seven FSIs as SDG indicators for 10.5.1. These are encouraged under the Enhanced General Data Dissemination System (e-GDDS), including:
1 - Regulatory Tier 1 capital to assets
2 - Regulatory Tier 1 capital to risk-weighted assets
3 - Nonperforming loans net of provisions to capital
4 - Nonperforming loans to total gross loans
5 - Return on assets
6 - Liquid assets to short-term liabilities
7 - Net open position in foreign exchange to capital

Concepts and definitions of these indicators are noted below:

Regulatory Tier 1 capital to assets: This is the ratio of the core capital (Tier 1) to total assets. It is a more stringent version of the leverage ratio and indicates the extent to which assets are funded by other than own funds and is a measure of capital adequacy of the deposit-taking sector.

Regulatory Tier 1 capital to risk-weighted assets: This FSI is calculated using total regulatory Tier 1 capital as the numerator and risk-weighted assets as the denominator. The data for this FSI are compiled in accordance with the guidelines of either Basel I, Basel II, or Basel III. It measures the capital adequacy of deposit takers based on the core capital concept of the Basle Committee on Banking Supervision (BCBS). Capital adequacy and availability ultimately determine the degree of robustness of financial institutions to withstand shocks to their balance sheets.

Nonperforming loans net of provisions to capital: This FSI is calculated by taking the value of nonperforming loans (NPLs) less the value of specific loan provisions as the numerator and capital as the denominator. Capital is measured as total regulatory capital. This FSI is a capital adequacy ratio and is an important indicator of the capacity of bank capital to withstand losses from NPLs.

Nonperforming loans to total gross loans: This FSI is calculated by using the value of NPLs as the numerator and the total value of the loan portfolio (including NPLs, and before the deduction of specific loan-loss provisions) as the denominator. This FSI is often used as a proxy for asset quality and is intended to identify problems with asset quality in the loan portfolio.

Return on assets: This FSI is calculated by dividing net income before extraordinary items and taxes (as recommended in the FSI Guide) by the average value of total assets (financial and nonfinancial) over the same period. This FSI is an indicator of bank profitability and is intended to measure deposit takers’ efficiency in using their assets.

Liquid assets to short-term liabilities: This FSI is calculated by using the core measure of liquid assets as the numerator and short-term liabilities as the denominator. The ratio can also be calculated by taking the broad measure of liquid assets as the numerator. This FSI is a liquid asset ratio and is intended to capture the liquidity mismatch of assets and liabilities, and provides an indication of the extent to which deposit takers can meet the short-term withdrawal of funds without facing liquidity problems.
Goal 10: Reduce inequality within and among countries

Net open position in foreign exchange to capital: The net open position in foreign exchange should be calculated based on the recommendation of the BCBS. Capital should be total regulatory capital as net open position in foreign exchange is a supervisory concept. This FSI is an indicator of sensitivity to market risk, which is intended to show deposit takers’ exposure to exchange rate risk compared with capital. It measures the mismatch of foreign currency asset and liability positions to assess the vulnerability to exchange rate movements.
Goal 10: Reduce inequality within and among countries

Target number: 10.7

Indicator Number and Name: 10.7.1 Recruitment cost borne by employee as a proportion of yearly income earned in country of destination

Agency: World Bank

Has work for the development of this indicator begun? Yes

Who are the entities, including national and international experts, directly involved and consulted in developing the methodology and or data collection tools?

"The work has been led by the World Bank’s KNOMAD including ILO Geneva. Experts from COMPAS Oxford University and University of California-Davis led the work on developing the methodology. Various stakeholders participated in the consultative process over the workshop format, including OECD, IOM, ILO, UNESCO, FAO, ACP, IFAD, UNPD, government agencies (US Department of Labor and the Philippine Department of Labor and Employment), think tanks, academia, civil society, and private foundations.

Local research institutes carried out small sample surveys, in collaboration with relevant ministries that deal with foreign labor policies. Survey countries include Spain, Kuwait, Korea, Ethiopia, India, Malaysia, Mexico, Nepal, Pakistan, and the Philippines. Local research institutes include government-research institutes such as India Labor Institute and Philippine Institute for Labor Studies.

The small sample surveys continues in 2016 in India, Italy, the Philippines and Russia.

As to the survey data collection, it employed the World Bank Survey Solutions – Computer-Assisted Personal Interviews (CAPI), and interviews were carried out face-to-face."

What is the involvement of or how do you plan to involve National Statistical Systems in the development of the methodology?

"There are several avenues to explore. First, the surveys can be carried out during the regular labor force surveys – developing a migration module, or including survey questions on recruitment costs in the existing migration module. Our experience shows this can be implementable: for instance, KNOMAD tested this in Indonesia’s national surveys carried out by the national statistics agency; moreover, KNOMAD involved in including recruitment cost-related questions in a new migration module of a national survey that has been carried out by the statistics agency of Kyrgyz Republic.

Second, surveys on recruitment costs can be also carried out as part of the initiative to have migration data at the disaggregate level. This can be undertaken by the World Bank, other UN organizations and countries. The World Bank and the KNOMAD can organize a series of workshops to build capacity of national statistics offices and relevant ministries of labor, in combination with ongoing World Bank’s efforts to improve capacity of national statistical agencies on how to use the World Bank Survey Solutions – Computer-Assisted Personal Interviews (CAPI) for national data collections.

The plan shall be identified through consultative process with stakeholders, including national statistics agencies."

Please briefly describe the process of developing the methodology for the indicator

"KNOMAD has developed the methodology over the following four stages. First, in 2013, experts from developed a conceptual framework on migration costs including recruitment costs, through a consultative process (workshops)."
Goal 10: Reduce inequality within and among countries

Second, in 2014, the experts developed a questionnaire by cost components – recruitment costs, financing costs, and wages and foregoing wages, which was vetted by pilot surveys in Spain, Kuwait and Korea.

Third, in 2015, KNOMAD and ILO further implemented small-sample surveys in Ethiopia, India, Malaysia, Mexico, Nepal, Pakistan, and the Philippines.

Fourth, the World Bank’s KNOMAD plans to present how to select and design the indicator to relevant stakeholders involved in establishing this indicator, including the ILO as well as relevant parties at the World Bank.

Once the indicator methodology has been developed, the World Bank’s KNOMAD will prepare the definition, the calculation and the variables needed to measure the indicator. It will explain the details relating to the data that will be used—the data source, and frequency of collection. The data catalogue for the indicator will also be developed in consultation with national statistical offices and governments.

It is important to underscore that the development of this indicator is being conducted in stages which will include the possibility of future refinements as data sources and methodologies.

When do you expect the methodological work on this indicator to be completed?

We expect to complete this by end July 2016.

Are data and metadata already being collected from the National Statistical System for one or more components of this indicator?

No

How do you plan to collect the data?

Send questionnaire(s) to country, Joint survey/compilation with national agency and international entity, Include relevant survey questions in the existing labor force/household surveys.

With what frequency is data expected to be collected?

Annual

Is there a process of data validation by countries in place or planned for this indicator?

Yes

If yes, please briefly describe:

Part of the data validation, KNOMAD carried out focus group discussions in survey countries and also presented findings from migration/recruitment costs data to relevant authorities. The World Bank will continue to employ this method to validate the data as well as provide qualitative information which may serve to develop country-level policy recommendations to reduce recruitment costs.
Goal 10: Reduce inequality within and among countries

If you have any additional comments that you believe would be helpful to IAEG-SDG members in analysing the work plan and methodological development of the indicator, please provide them here:

The World Bank’s Global Knowledge Partnership on Migration and Development (KNOMAD) where ILO participates as a co-chair, has been conducting small-sample migrant surveys since 2014. It aims to compile monetary and non-monetary migration costs by local currency incurred by low-skilled migrants. The cost components include recruitment costs at the detailed level (costs associated with recruitment agency fees, passport, visa, air transportation, medical exam, etc), as well as wages. This allows to express recruitment costs in months/years of expected wages. It also collects data on late payments of wages, unpaid-work hours, compensation for work-related sickness or injuries, which allows to compute foregone wages owing to these weak labor/living conditions in destination countries. This KNOMAD data can be disaggregated by gender, as well as by sector – namely agricultural, construction, manufacturing/industry, and domestic help/services sectors. As the data is by origin-destination corridor, KNOMAD can construct the data as a bilateral matrix. To date, this is the only existing data that allows cross-country/corridor comparisons of recruitment costs.
Goal 10: Reduce inequality within and among countries

Target number: 10.7

Indicator Number and Name: Indicator 10.7.2: Number of countries that have implemented well-managed migration policies

Agency: UNDESA and IOM

Has work for the development of this indicator begun? Yes

Who are the entities, including national and international experts, directly involved and consulted in developing the methodology or data collection tools?

"IOM: Frank Laczko, Lars Johan Lönnback, Susanne Melde
UN DESA Population Division: Jorge Bravo, Bela Hovy, Vinod Mishra,
The Global Migration Group (its working group on Data and Statistics) has since 2013 considered suggestions for indicators of migration related SDG targets as the negotiations on the post-2015 framework evolved. Since the IAEG-SDG initiated its work, the co-chairs of the GMG working group, IOM and UN DESA, have collaborated to develop joint proposals to the IAEG SDG. Indicator 10.7.2 was incorporated in the indicator framework endorsed by the UN Statistical Commission in March 2016. IOM and UN DESA PD have continued to collaborate to specify the meta-data and methodology for this indicator (more information provided under “9. General Comments” below)."

What is the involvement of or how do you plan to involve National Statistical Systems in the development of the methodology?

Since the indicator refers to dimensions of migration policies for which no systematic, national-level, internationally comparable data exists, (see answer to point 9 below), the initial phase of development of the indicator has taken place amongst experts on migration and population policy. We anticipate a higher degree of involvement of NSOs and other technical experts at a later stage, including during testing of the questionnaire and defining summary statistics of the various dimensions of the indicator.

Please briefly describe the process of developing the methodology for the indicator

"The main goal is to formulate a clear and simple methodology based on existing data sources and instruments to collect it, which could produce meaningful, actionable and timely information of key gaps and good practices in relation to “well-managed migration policies” of countries. The process has entailed:
a) comparative analysis with previous indicators for the MDGs and other SDG indicators already gaining acceptance from the IAEG SDG;
b) identification of two key bases for the development and specification of the indicator: the IOM Council resolution C/106/40 on Migration Governance Framework, which specifies 6 domains of what can be considered a first international standard for “well-managed migration policies” (cf. SDG target 10.7), and the UN Inquiry among governments on Population and Development (the “Inquiry”), mandated by the General Assembly and undertaken since 1963 (https://esa.un.org/poppolicy/Inquiry.aspx), which contains questions/data on migration policies;
c) Identification of a preliminary set of questions in the current (11th) and future editions of the UN Inquiry, and perhaps other data sources, that could serve as proxy for each of the six policy domains established by the Migration Governance Framework. Additional questions and elements are being formulated through a joint initiative by IOM and the Economist Intelligence Unit on a Migration Governance Framework (MGI).
d) All questions will be tested through consultations among experts, including from NSOs."

When do you expect the methodological work on this indicator to be completed?

December 2016
Goal 10: Reduce inequality within and among countries

Are data and metadata already being collected from the National Statistical System for one or more components of this indicator?

Yes

If yes, please describe:

The Inquiry has been implemented every 5 years. The migration component already has some questions/data pertinent to at least 3 of the 6 domains of the conceptual framework for 10.7.2. Additional relevant questions can be adapted or added in future editions, and more information could be drawn from other sources (IOM- EIU initiative, others).

How do you plan to collect the data?

Send questionnaire(s) to country, Obtain data directly from country database/website, Joint survey/compilation with national agency and international entity

If the indicator involves multiple components from different data sources, please describe how each individual component of the indicator will be collected here.

To be determined

With what frequency is data expected to be collected?

Annually for some sub-indicators, every 4 years, in synch with the HLPF 4-year cycle, for others

Is there a process of data validation by countries in place or planned for this indicator?

No

If you have any additional comments that you believe would be helpful to IAEG-SDG members in analysing the work plan and methodological development of the indicator, please provide them here:

"IOM and UN DESA have made a preliminary presentation the IAEG SDG (meeting in Mexico City, 31 March to 2 April, 2016) an indicator for SDG target 10.7 on ""The number of countries that have implemented well-managed migration policies"". This indicator aims to describe the state of global migration policy and to track the evolution of such policies over time. The information collected could be disaggregated by region and country, and could identify both progress made and gaps, thus serving as evidence base for actionable recommendations for the implementation of SDG target 10.7. The 6 domains of the Framework for “well-managed migration policy” indicator referenced above (IOM Council resolution C/106/40) are: 1. Institutional capacity and policy; 2. Migrant rights; 3. Safe and orderly migration; 4. Labour migration and recruitment costs; 5. International partnerships; 6. Humanitarian crises and migration policy. The indicator will be an essential to track all migration-related SDG targets, and it should complement and even help to inform other targets such as 4.b, 5.2, 8.8, 16.2 and 17.18.

Data source, method of computation and international consensus: The main source of data will be the UN Inquiry among governments on Population and Development, which has been surveying global population policies for several decades, including migration policies since 2011. The Inquiry will be updated to analyse measures across six migration-related policy domains mentioned above. Each policy domain will include one key sub-indicator that represents a proxy for the policy domain in question. The purpose of this indicator will not be to rank countries. Rather, the information to be extracted from the Inquiry will serve to register progress and identify gaps across policy domains, such as
Goal 10: Reduce inequality within and among countries

countries in need of support for institutional building or strengthening, or any other relevant policy domain. This indicator for SDG target 10.7 will also be used to empirically document the future thematic reviews at the HLPF, as migration is an issue that cuts across many SDGs and targets."
Goal 10: Reduce inequality within and among countries

Target number: 10.c

Indicator Number and Name: 10.c.1 Remittance costs as a proportion of the total amount remitted

Average total cost of sending $200 (or equivalent in local sending currency, adjusted for inflation) in each country corridor (expressed as % of amount sent)

Agency: World Bank

Has work for the development of this indicator begun?

Yes

Who are the entities, including national and international experts, directly involved and consulted in developing the methodology/and or data collection tools?

World Bank

What is the involvement of or how do you plan to involve National Statistical Systems in the development of the methodology?

The IMF and the World Bank work with the Central Banks to improve data collection on remittances following the Balance of Payments 6 where new definitions for remittances were established.

Please briefly describe the process of developing the methodology for the indicator

In any market, transparency and dissemination of information is important, because it enables individuals to make informed decisions about which services to use, and it also helps to make the market as a whole more efficient. In the remittances market, in particular, the total cost might not always be clear to customers as there are a number of variables that go into it: the transaction fee, the exchange rate applied and the margin eventually charged, and the speed of the service, among others. In principle, all these elements must be captured in the information to the consumer; in practice, this is not always the case. Therefore, combining all these elements to calculate which service is cheapest in a comparable way is difficult for most remittance consumers. In addition, it is difficult to measure improvements in remittance markets, as there is little data on cost and efficiency. For this reason, the World Bank has released this website, which reports comparable remittance price data and service terms.

Currently, the database covers 365 "country corridors" worldwide. The corridors studied flows from 48 remittance sending countries to 105 receiving countries. In most cases, data was captured from the main sending location/area for the corridor in question to the capital city or most populous city in the receiving market.

The methodology also consist on “mystery shopping” to collect the data to have an accurate information on prices. It is also important not to indicate the date that the data is collected and keep changing every time so companies are not biased to reduce their prices only for that day.

Please indicate new international standards that will need to be proposed and approved by an intergovernmental process (such as UNSC) for this methodology.

Please indicate new international standards that will need to be proposed and approved by an intergovernmental process (such as UNSC) for this methodology.
Goal 10: Reduce inequality within and among countries

There is no need for a new international standard. This methodology has already been proved and used for the last 8 years.

When do you expect the methodological work on this indicator to be completed?

The methodology is developed and the indicator work is completed. KNOMAD is undertaking an analysis with Consumer International to look at the issues on remittance prices from the perspective of the consumer to complement with the views of the consumer.

Are data and metadata already being collected from the National Statistical System for one or more components of this indicator?

Yes

If yes, please describe:

This indicator has been collected since 2008. And each time a new corridor is added

How do you plan to collect the data?

Other: survey, mystery shopping

If the indicator involves multiple components from different data sources, please describe how each individual component of the indicator will be collected here.

Data is collected by researchers posing as customers and contacting firms within each corridor. Researchers collected data within each corridor on the same day, in order to control for fluctuations in exchange rates and other changes in fee structures. It should be noted that data this database is intended to serve as a snapshot of a moment in time, and that pricing may vary over time.

Additional details on the methodology used for collecting data are as follows:

- **Firms Data** is collected for the major service providers in each corridor, including both the primary Money Transfer Operator (MTO) and Banks active in the market, as well as the Post Office when available. Surveyed firms are selected aiming to provide a representative sample of the market in each corridor. Companies surveyed within each corridor are selected to cover the maximum remittance market share possible, aiming at a minimum aggregated market share of 80 percent.

- **Amounts:** For the original database, two amounts were surveyed per corridor: the local currency equivalent of USD 200, and the local currency equivalent of USD 500. For the information collected in the first quarter of 2009, the original amounts in local currency were kept for comparability purposes; hence, some of the local currency amounts may differ from the USD 200 and 500 benchmarks due to currency fluctuations. In the third quarter of 2009, the local currency equivalent amounts of USD 200 and 500 were adjusted in order to reflect foreign exchange fluctuations. As a result, send amounts in local currency may differ from the ones surveyed in the previous iterations.

- **Transfer fee:** This is the most visible cost component, and can differ significantly among market players. This fee usually represents the charge the sender pays at the initiation point, and usually varies with the amount sent, within set bands. In some cases, there may be fees and taxes charged at the destination that have not been detected in this database.

- **Exchange Rate Margin:** An important portion of the remittance cost is the exchange rate spread, which is not quoted in the transfer fee. Even though remittances can be paid in US dollars in some countries, the majority of remittance transactions are paid in local currencies, and, thus, an exchange operation is required. In this database, where remittances are paid in dollars, or where exchange rate information was not provided, this
Goal 10: Reduce inequality within and among countries

information may not be available. In these cases, the actual total costs might be higher than indicated in the database.

- **Product:** The database covers different forms of transactions. For each firm the type of product(s) offered was noted within the following categories: door to door, cash to cash, account to account (same bank), account to account (other bank), account to cash, cash to account, cash to account (same bank), credit/debit card service, pre-paid card service, online service, mobile service, USD service, LCU service, EUR service. As of Q2 2016, to better reflect market developments, this category was converted into **Payment Instrument** to capture the payment means used by the sender to initiate the transaction, categorized as follows: cash, bank account transfer, debit credit and/or prepaid card, mobile money. Similarly, as of Q2 2016, RPW captures the way the transaction is received by the sender under **Receiving method**, using as categories cash, bank account (either hold at any bank or within the same or a partner bank as the one used by the sender), mobile wallet. When transaction is disbursed in cash, the type of location where money can be picked up is also recorded (agent, bank branch, Post Office, home delivery).

- **Access point:** As of Q2 2016, RPW captures the type of access point where transaction can be initiated by the sender. This include: agent, bank branch, post office, Internet, mobile phone, call center.

- **Speed of transfer:** The speed of transfer is the time needed for the remittance to be available for the receiver. The transfer speed is noted for each product. Since the First Quarter 2009 the speed of transfer has been standardized in six broad categories: less than one hour, same-day, next day, 2 days, 3 to 5 days, and 6 days or more.

- **Network coverage:** Since the Q1 2009 the database also includes, for each company surveyed, a description of the network coverage in the receiving country. This additional variable complements the overall picture for price and convenience of the service offered by each RSP. The following categories were used to describe RSP coverage: nationwide, urban only, rural only, main city, major cities. Since the Q2 2016, network coverage is captured **both for the sending and receiving network** and ranked as high, medium, low.

**With what frequency is data expected to be collected?**

Every quarter

**Is there a process of data validation by countries in place or planned for this indicator?**

Yes

**If yes, please briefly describe:**

The data is posted in the web site. Everybody can take a look at it to verify the data.

The pricing data provided in this database are intended to serve as a snapshot of the cost of remittances on specific dates and time. Actual costs may vary. The World Bank provides no warranty, expressed or implied, as to the accuracy or completeness of the data furnished. The data and information provided herein should not be used as a substitute for actual pricing information that consumers should obtain directly from service providers.

If you have any additional comments that you believe would be helpful to IAEG-SDG members in analysing the work plan and methodological development of the indicator, please provide them here:

Remittance Prices Worldwide (RPW) monitors remittance prices across all geographic regions of the world. Launched
Goal 10: Reduce inequality within and among countries

in September 2008, RPW remains a key tool to monitor the cost incurred by remitters when sending money along major remittance corridors. RPW is used as a reference for measuring progress towards global cost reduction objectives, including

The G20 commitment.

As of Quarter 2 in 2016, RPW covers 48 sending remittance countries and 105 receiving countries, for a total of 365 corridors (up from 227 in Quarter 2 in 2015).
Goal 11: Make cities and human settlements inclusive, safe, resilient and sustainable

Goal 11

Target number: 11.3

Indicator Number and Name: “11.3.2 Proportion of cities with a direct participation structure of civil society in urban planning and management that operate regularly and democratically”

Agency: UN-Habitat

Has work for the development of this work begun? Yes

Who are the entities, including national and international experts, directly involved and consulted in developing the methodology and or data collection tools?

“UN-Habitat is leading the methodology development of this indicator in close collaboration with several national and international entities as well as experts from selected countries. These include gender units from UN-Women, Gender Unit focal person from selected countries and UNICEF regional offices. Also selected national governments are being consulted and will continue to guide the process towards finalization of this indicator.”

What is the involvement of or how do you plan to involve National Statistical Systems in the development of the methodology?

Selected national statistical offices have been included in the planned expert group meetings that are organized to further development of this indicator. Also several experts will be consulted during the methodological development and selected national statistical systems/offices will be involved during the pilot testing of the methodology and data collection exercises.

Please briefly describe the process of developing the methodology for the indicator

“The major principle behind the development of the methodology for the indicator is to make all efforts capturing and reflecting the vision behind the formulation to indicator and ensuring that the methodological development is highly linked to how data will be collected at country level. In this methodological development, both national and international selected experts will be consulted and UN-Habitat will take the lead on drafting methodological and data collection methods. Several rounds of consultations with many stakeholders have been organized and this includes two high level expert group discussions—one which is virtual and a final one that is face to face”

Please indicate new international standards that will need to be proposed and approved by an intergovernmental process (such as UNSC) for this methodology.

This indicator requires embedding into routine data collection processes, as such the methodology will be pilot tested in selected countries using internationally acceptable standards. The results of this exercise will ensure that the methodology for guiding and collection of data for this indicator will fulfill international standards.

When do you expect the methodological work on this indicator to be completed?

By August 2017

Are data and metadata already being collected from the National Statistical System for one or more components of this indicator?

No
Goal 11: Make cities and human settlements inclusive, safe, resilient and sustainable

When do you expect work to begin on developing a methodology and with which partners will your organization work?

The work for the methodology development has already started with developing a detailed calendar of events. The first high level expert group discussion is planned for November 2016 with a final expert group meeting planned for Feb 2017. Other one on one consultation with other agencies is ongoing.

How do you plan to collect the data?

Efforts will be made to collect the data for this indicator from routine national surveys. Hence, data for this indicator will be collected from household surveys and censuses, administrative registries, local governments and electoral offices where applicable.

If the indicator involves multiple components from different data sources, please describe how each individual component of the indicator will be collected here.

Participation will be gauged from various dimensions including disaggregation by gender and ages where applicable. Detailed data on the various forms of participation will hence come from various institutions. Each national government will have the primary responsibility on data collection and validation of this indicator following a programme of capacity strengthening to selected countries to ensure uniformity in the data collection processes globally. Support will be provided to countries where capacity challenges on data collection exist.

With what frequency is data expected to be collected?

Data will be reported every two years.

Is there a process of data validation by countries in place or planned for this indicator?

Yes

If yes, please briefly describe:

Data validation procedures will be fully developed and packaged for training all national statistical systems. As such, all countries collecting data for this indicator will have to follow the strict validation procedures agreed upon internationally. UN-Habitat, will provide the technical support for both data collection and validation, as well as monitor compliance for agreed procedures.

If you have any additional comments that you believe would be helpful to IAEG-SDG members in analysing the work plan and methodological development of the indicator, please provide them here:

“The indicator development processes will be guided by internationally agreed procedures. This may sometimes take longer especially where many partners are involved.”
Goal 11: Make cities and human settlements inclusive, safe, resilient and sustainable

Target number: 11.4

Indicator Number and Name: 11.4.1 Total expenditure (pubpe of heritage (cultural, natural, mixed, World Heritage Centre designation), level of government (national, regional, and local/municipal), type of expenditure (operating expenditure/investment) and type of private funding (donations in kind, private non-profit sector, sponsorshiplic and private) per capita spent on the preservation, protection and conservation of all cultural and natural heritage, by type

Agency: UNESCO Institute for Statistics

Has work for the development of this indicator begun? Yes

Who are the entities, including national and international experts, directly involved and consulted in developing the methodology/and or data collection tools?

"UIS is convening a meeting of experts for 26-28 September 2016. UIS will be inviting experts from selected international agencies (i.e. UNESCO, UN Habitat, UNEP, Eurostat), NGO’s (ICOMOS, IUCN, ICCROM), selected national government ministries and independent experts.

The objectives of the meeting will be to:
  i) Discuss SDG indicator 11.4.1
  ii) Identify initial methodological issues
  iii) Identify policy priorities and better understand the availability of heritage data
  iv) Identify potential sources of data at national level
  v) Make initial recommendations for a global data collection

It is anticipated that between 15-20 participants will be in attendance. After the meeting, a work plan for the development and implementation of a global data collection will be developed. This will include methodological work."

What is the involvement of or how do you plan to involve National Statistical Systems in the development of the methodology?

Selected experts will be consulted during the methodological development and selected countries will be involved during the pilot questionnaire stage.

Please briefly describe the process of developing the methodology for the indicator

"Expert group in September 2016 will identify initial methodological issues. UIS will engage an expert to help develop the necessary methodology in collaboration with relevant partners as well as design the data collection instrument. Existing relevant methodologies will be used and new methodology developed as necessary."

When do you expect the methodological work on this indicator to be completed?

December 2017

Are data and metadata already being collected from the National Statistical System for one or more components of this indicator?

Yes
Goal 11: Make cities and human settlements inclusive, safe, resilient and sustainable

If yes, please describe:

"Population data for all countries are available as well as UN population estimates. UN estimates will be used to calculate the indicator.

Data to produce the indicator (and some of its components) is available for selected countries."

How do you plan to collect the data?

Send questionnaire(s) to country

If the indicator involves multiple components from different data sources, please describe how each individual component of the indicator will be collected here.

Each relevant national respondent will be sent a questionnaire. Consideration is being given to identify a national focal point for each country that would be responsible to coordinate the response to the UIS survey.

With what frequency is data expected to be collected?

Annual

Is there a process of data validation by countries in place or planned for this indicator?

Yes

If yes, please briefly describe:

Validation will be part of the data collection and dissemination process. It is anticipated that countries will validate the indicator(s) prior to release by UIS.

If you have any additional comments that you believe would be helpful to IAEG-SDG members in analysing the work plan and methodological development of the indicator, please provide them here:

The 2009 UNESCO FCS provides the methodological basis for the development of the indicator.
Goal 11: Make cities and human settlements inclusive, safe, resilient and sustainable

Target number: 11.5

Indicator Number and Name: "11.5.1 Number of deaths, missing persons and persons affected by disaster per 100,000 people"

Agency: UNISDR

Has work for the development of this indicator begun? Yes

Who are the entities, including national and international experts, directly involved and consulted in developing the methodology and/or data collection tools?

"Open-ended intergovernmental expert working group on indicators and terminology (OEIWG) [A/RES/69/284], comprising experts nominated by States, UN agencies and relevant stakeholders, has proposed possible indicators to measure global progress in the implementation of the Sendai Framework. The work of the OEIWG shall be completed by December 2016 and its report submitted to the General Assembly for consideration. UNISDR, as the Secretariat for the OEIWG, supports deliberation of Member States by producing technical notes addressing critical issues, including feasibility, computation methodology, data availability etc. UNISDR Scientific and Technical Advisory Group (STAG) has provided the OEIWG with technical recommendations. (Member List: https://www.unisdr.org/files/workspace/7935_stagmembers.pdf)"

What is the involvement of or how do you plan to involve National Statistical Systems in the development of the methodology?

"In most countries national disaster loss databases are established and managed by special purpose agencies including national disaster agencies, civil protection agencies, and meteorological agencies, and disaster data is collected by line ministries. Therefore, it is essential for national statistical offices (NSOs) to closely collaborate with such agencies and line ministries in charge of targeted data."

Please briefly describe the process of developing the methodology for the indicator

"The proposed indicators were reviewed and examined by other UN agencies and submitted to the IAEG process in early-July 2015. Then in late-July 2015, those indicators were again reviewed by the Expert Group Meeting, organized by UNISDR consisting of more than 60 experts from UN system, scientific and academic organizations, civil sector and private sector and submitted and examined by the Member States in the OEIWG. So far two sessions of the OEIWG were held, in September 2015 and February 2016, where Member States were deliberating proposed indicators and terminology. Additional consultation was done in June 2016, and is planned for convergence in the work in advance of the third session of the OEIWG in November 2016. UNISDR, as a secretariat for the OEIWG, has supported deliberation of Member States in collaboration with other UN agencies and academia. Related information and documents can be found on the web: http://www.preventionweb.net/drr-framework/open-ended-working-group/"

Please indicate new international standards that will need to be proposed and approved by an intergovernmental process (such as UNSC) for this methodology.

"As the Sendai Framework stipulates, any scales and types of disasters should be addressed."
Goal 11: Make cities and human settlements inclusive, safe, resilient and sustainable

The methodology proposes the collection and use of simple and uniform physical indicators of mortality (number of people) as the point of departure for computation. Time dimension should be defined when to record/report data. Methodologies and standards as well as data for “number of deaths” are very solid and robust. The number of “missing persons” is subject to legal procedures and time threshold, thus it is not consistently collected among Member States. The number of “persons affected” has same problems as those of “missing persons” but with more complexity. The definition of “persons affected” has not been universal and still under development. The OEIWG is currently discussing sub-categories of “persons affected” taking into account rationality and feasibility. Nevertheless double-counting is unavoidable in many countries and the value is a proxy, it would provide global trends and measure global progress.

More information can be found in the document prepared for the Second Inter-Sessional Informal consultations of the Chair (20-21 June 2016): http://www.preventionweb.net/documents/oiewgTechnical%20Collection%20of%20Concept%20Notes%20on%20Indicators.pdf

When do you expect the methodological work on this indicator to be completed?

The OEIWG will complete discussion by December 2016

Are data and metadata already being collected from the National Statistical System for one or more components of this indicator?

No

When do you expect work to begin on developing a methodology and with which partners will your organisation work?

"The OEIWG is currently developing indicators to measure global progress in the implementation of the Sendai Framework, which will eventually be SDG indicators. We closely work with Members of the OEIWG, with which we expect NSO must have synergies and shared responsibilities to collect data."

How do you plan to collect the data?

In the past countries voluntarily provided UNISDR with data and information via online-based. We have established a comparable national disaster loss database, DesInventar (http://www.desinventar.net/index_www.html). Although the current coverage exceeds 89 countries, it is expected that by 2020 all countries will build/adjust national disaster loss databases according to the recommendations and guidelines of the OEIWG. We are planning to upgrade national disaster loss database with data collection tools using the latest technologies (cloud based, API) for disaster damage data at local level, which requires quality control and technical support for across all levels of governments. Ideally the system should use a single entity for the UN system, that can serve multiple purposes and can be used by across UN agencies.

If the indicator involves multiple components from different data sources, please describe how each individual component of the indicator will be collected here.

The national government in each country takes primary responsibility in data collection and reporting in collaboration within and across levels of governments.

With what frequency is data expected to be collected?
Goal 11: Make cities and human settlements inclusive, safe, resilient and sustainable

Ideally hazard-by-hazard basis, at least annually

Is there a process of data validation by countries in place or planned for this indicator?

Each country takes primary responsibility in his data validation. UNISDR acts as a “clearing house” in charge of technical support, quality control, data aggregation, analysis of trends and patterns, and measurement of progress/reporting.

If you have any additional comments that you believe would be helpful to IAEG-SDG members in analysing the work plan and methodological development of the indicator, please provide them here:

"The proposed methodology and collection is currently under deliberation in the OEIWG. This proposal is mainly based on UNISDR analysis, experience, and knowledge built in the period under the Hyogo Framework for Action (2005-2015).

Not every country has a comparable national disaster loss database that is consistent with the proposed guidelines (although current coverage exceeds 89 countries). Therefore, by 2020, it is expected that all countries will build/adjust national disaster loss databases according to the recommendations and guidelines of the OEIWG."
Goal 11: Make cities and human settlements inclusive, safe, resilient and sustainable

Target number: 11.5

Indicator Number and Name: "11.5.2 Direct disaster economic loss in relation to global GDP, including disaster damage to critical infrastructure and disruption of basic services"

Agency: UNISDR

Has work for the development of this indicator begun? Yes

Who are the entities, including national and international experts, directly involved and consulted in developing the methodology and or data collection tools?

"Open-ended intergovernmental expert working group on indicators and terminology (OEIWG) [A/RES/69/284], comprising experts nominated by States, UN agencies and relevant stakeholders, has proposed possible indicators to measure global progress in the implementation of the Sendai Framework. The work of the OEIWG shall be completed by December 2016 and its report submitted to the General Assembly for consideration.

UNISDR, as the Secretariat for the OEIWG, supports deliberation of Member States by producing technical notes addressing critical issues, including feasibility, computation methodology, data availability etc.

UNISDR Scientific and Technical Advisory Group (STAG) has provided the OEIWG with technical recommendations.

(Member List: https://www.unisdr.org/files/workspace/7935_stagmembers.pdf)"

What is the involvement of or how do you plan to involve National Statistical Systems in the development of the methodology?

"In most countries national disaster loss databases are established and managed by special purpose agencies including national disaster agencies, civil protection agencies, and meteorological agencies, and disaster data is collected by line ministries.

Therefore, it is essential for national statistical offices (NSOs) to closely collaborate with such agencies and line ministries in charge of targeted data."

Please briefly describe the process of developing the methodology for the indicator

"The proposed indicators were reviewed and examined by other UN agencies and submitted to the IAEG process in early-July 2015. Then in late-July 2015, those indicators were again reviewed by the Expert Group Meeting, organized by UNISDR consisting of more than 60 experts from UN system, scientific and academic organizations, civil sector and private sector and submitted and examined by the Member States in the OEIWG.

So far two sessions of the OEIWG were held, in September 2015 and February 2016, where Member States were deliberating proposed indicators and terminology. Additional consultation was done in June 2016, and is planned for convergence in the work in advance of the third session of the OEIWG in November 2016. UNISDR, as a secretariat for the OEIWG, has supported deliberation of Member States in collaboration with other UN agencies and academia.

Related information and documents can be found on the web:
http://www.preventionweb.net/drr-framework/open-ended-working-group/"

Please indicate new international standards that will need to be proposed and approved by an intergovernmental process (such as UNSC) for this methodology.

"As the Sendai Framework stipulates, any scales and types of disasters should be addressed."
Goal 11: Make cities and human settlements inclusive, safe, resilient and sustainable

The methodology proposes, whenever possible, the collection and use of simple and uniform physical indicators of damage (counts of assets affected) as the starting point for calculations, instead of requesting countries to directly evaluate the economic value of direct losses. A centralized and common approach to estimate direct economic losses will result in a homogeneous and consistent indicator.

Time dimension should be defined when to record/report data.

The OEIWG is currently discussing sub-categories of “direct disaster economic loss” taking into account rationality and feasibility among Member States. Although there are great variation in physical and economical situations and data availability among Member States, the value would provide global trends and measure global progress.

“Critical infrastructure” and “basic services” needs to be defined, taking into account data availability and feasibility in most countries.

There are several dimensions of “disruption”, i.e. complete/partial interruption and level of service, which needs to be defined.

Although there are great variation in physical and economical situations and data availability among Member States, the indicators would provide global trends and measure global progress.

More information can be found in the document prepared for the Second Inter-Sessional Informal consultations of the Chair (20-21 June 2016):
http://www.preventionweb.net/documents/oiewg/Technical%20Collection%20of%20Concept%20Notes%20on%20Indicators.pdf

When do you expect the methodological work on this indicator to be completed?

The OEIWG will complete discussion by December 2016

Are data and metadata already being collected from the National Statistical System for one or more components of this indicator?

No

When do you expect work to begin on developing a methodology and with which partners will your organisation work?

"The OEIWG is currently developing indicators to measure global progress in the implementation of the Sendai Framework, which will eventually be SDG indicators. We closely work with Members of the OEIWG, with which we expect NSO must have synergies and shared responsibilities to collect data."

How do you plan to collect the data?

In the past countries voluntarily provided UNISDR with data and information via online-based. We have established a comparable national disaster loss database, DesInventar (http://www.desinventar.net/index_www.html). Although the current coverage exceeds 89 countries, it is expected that by 2020 all countries will build/adjust national disaster loss databases according to the recommendations and guidelines of the OEIWG. We are planning to upgrade national disaster loss database with data collection tools using the latest technologies (cloud based, API) for disaster damage data at local level, which requires quality control and technical support for across all levels of governments. Ideally the system should use a single entity for the UN system, that can serve multiple purposes and can be used by across UN agencies.
Goal 11: Make cities and human settlements inclusive, safe, resilient and sustainable

If the indicator involves multiple components from different data sources, please describe how each individual component of the indicator will be collected here.

The national government in each country takes primary responsibility in data collection and reporting in collaboration within and across levels of governments.

With what frequency is data expected to be collected?

Ideally hazard-by-hazard basis, at least annually

Is there a process of data validation by countries in place or planned for this indicator?

Each country takes primary responsibility in his data validation. UNISDR acts as a “clearing house” in charge of technical support, quality control, data aggregation, analysis of trends and patterns, and measurement of progress/reporting.

If you have any additional comments that you believe would be helpful to IAEG-SDG members in analysing the work plan and methodological development of the indicator, please provide them here:

"The proposed methodology and collection is currently under deliberation in the OEIWG. This proposal is mainly based on UNISDR analysis, experience, and knowledge built in the period under the Hyogo Framework for Action (2005-2015).

Not every country has a comparable national disaster loss database that is consistent with the proposed guidelines (although current coverage exceeds 89 countries). Therefore, by 2020, it is expected that all countries will build/adjust national disaster loss databases according to the recommendations and guidelines of the OEIWG."
Goal 11: Make cities and human settlements inclusive, safe, resilient and sustainable

Target number: 11.7

Indicator Number and Name: “11.7.1 Average share of the built-up area of cities that is open space for public use for all, by sex, age and persons with disabilities”

Agency: UN-Habitat

Has work for the development of this work begun? Yes

Who are the entities, including national and international experts, directly involved and consulted in developing the methodology and/or data collection tools?

UN-Habitat will take the lead in global reporting which will follow efforts of directly working with national statistical agencies for reporting at national levels. UN-Habitat and other partners including other private and regional commissions will lead the efforts of building national capacities to monitor and report on this indicator. The following partners will be consulted in the further development of this indicator: UNSDSN, European Commission, New York University, World Bank, UNFPA, UN-DESA, ICLEI, DANE, Penn Institute, Tellus Institute, Centre for Livable cities, DANE, ESRI, INEGI, New School-New York, GvSig, ICL, WCCD, Urban Institute, ESA, etc.

What is the involvement of or how do you plan to involve National Statistical Systems in the development of the methodology?

UN-Habitat has a global network of urban observatories who work closely with the National statistical systems in many countries to collect and monitor urban spaces and indicators. These networks will be used to invite member countries to make contributions to the methodology developments. In addition member states will be consulted through the Inter-Agency and Expert Group (IAEG) on Sustainable Development Goal Indicators. A methodological proposal will be submitted to the IAEG by February 2017, following a planned EGM in late January 2017.

Please briefly describe the process of developing the methodology for the indicator

In this methodological development, both national and international experts will be consulted and UN-Habitat will take the lead on drafting methodological and data collection methods.

"UN-Habitat will organize several expert consultation (virtual and Face-to-Face), in collaboration with several partners involved in the development of this methodology. The consultation will involve representatives from national statistical agencies, independent scholars and representatives of the private sector and the civil society. The consultation will focus on harmonization of definitions. It will also discuss the computation of the proposed indicator. Data collection will refer to the adoption of the approach proposed by the EGMs. The first expert group meeting will be a virtual one and will take place in November 2016, followed by a face-to-face EGM in late January 2017. As a second step, based on the results of the expert meetings, UN-Habitat will take the lead on drafting a proposal in collaboration with key partners that will be submitted to the IAEG before the end of March 2017, in view of a gathering comments and opinions from member countries by mid-2017.

Please indicate new international standards that will need to be proposed and approved by an intergovernmental process (such as UNSC) for this methodology.

This indicator requires setting new international standards and agreeing on concepts prior to global data collection. Definitions such as the ‘Built-up area’ which is currently defined as that part of a city which is the contiguous area occupied by buildings and other impervious surfaces including the urban vacant areas in and around them but excluding rural areas beyond the urban fringe, will have to be
Goal 11: Make cities and human settlements inclusive, safe, resilient and sustainable

agreed upon. Also the population definition to be applied for this indicator will need international agreement. Currently, the ‘population’ of a city is defined as the sum of the population in the set of administrative districts that together encompass the ‘built-up area’ of that ‘city’ in the year that measurements are taken. The method for computation will also form part of the international standards to be agreed upon. Currently we have proposed the method to estimate the area of public space based on three steps: a) spatial analysis to delimit the built-up area of the city; b) estimation of the total open public space and; c) estimation of the total area allocated to streets.

When do you expect the methodological work on this indicator to be completed?

June 2017

Are data and metadata already being collected from the National Statistical System for one or more components of this indicator?

Yes,

If yes, please describe:
Data for this indicator has been generated for several cities based on secondary data sources that come from the National Statistical Systems and complemented by GIS data from other partner sources (European Commission, GvSig, etc). Analysis has been done for over 100 cities which form part of the City Prosperity Initiative.

How do you plan to collect the data?

Data for this indicator will come from various sources including Household survey data, GIS data from various partners, land use maps from National statistical systems and city planning departments, and supplementary data will be collected via mobile phone mapping and data collection technologies.

If the indicator involves multiple components from different data sources, please describe how each individual component of the indicator will be collected here.

Each country national government will take responsibility on data collection and validation of this indicator. Efforts will be made not excessively over burden countries through simplifying and sharing the most cost effective way to undertake the data collection.
Household level data will be available from the rosters of many national statistical systems. Additional GIS /maps data will be available from National statistical systems. GIS data and satellite images with high resolutions will be obtained from other third party agencies such as European space agency, Google, etc. Land use maps will be obtained from city planning departments. Additional data will be collected using mobile phone based technologies.

With what frequency is data expected to be collected?

Data will likely be collected every 2 years depending on the national statistical calendars of various countries. Household’s level survey data will likely be available from every 3-5 years. GIS and land use maps data will be available every two years, while Mobile data collections will happen every two years, with updates in subsequent years.

Is there a process of data validation by countries in place or planned for this indicator?

Yes
Goal 11: Make cities and human settlements inclusive, safe, resilient and sustainable

If yes, please briefly describe:

Capacity building exercises are planned to take place at regional and at country level. Data will be validated at a country level and the UN-Habitat together with other partners will provide the technical support for both data collection and validation.

If you have any additional comments that you believe would be helpful to IAEG-SDG members in analysing the work plan and methodological development of the indicator, please provide them here:

This indicator has been collected for over 100 cities as part of the city prosperity initiative under UN-Habitat. The methodology development is at advanced stages with a full database compiled and expanding to several other countries. In our view (UN-Habitat), this indicator should be Tier II. The current method of computation is described below;

Methods for Computation of the Proposed Indicator:

The method to estimate the area of public space is based on three steps: a) spatial analysis to delimit the built-up area of the city; b) estimation of the total open public space and; c) estimation of the total area allocated to streets.

a. Spatial analysis to delimit the built-up area. Delimit the built-up area of the urban agglomeration and calculate the total area (square kilometers). Land use maps, inventories to be locally generated to identify public spaces if possible complemented by fieldwork.

b. Computation of total area of open public space. Map and calculate the total areas of open public space within the defined urban boundaries based on the built-up area. The inventory of open public spaces is digitalized and vectorised using GIS software to allow computation of surfaces. The total of open public area is divided by the total built-up area of the city to obtain the proportion of land allocated to public spaces.

c. Estimation of the land allocated to streets. Calculation of the total area allocated to streets based on sampling techniques with a random sample of 10 hectares locales is selected out of a complete listing of the all hectares locales that form the city, using the built-up area definition indicated above.
   • The sampling relies on a Halton Sequence of coordinates that, when repeated, always selects the same points (see figure 1)

Figure 1: The spatial distribution of randomly selected 10-hectare locales in an area of Addis Ababa, Ethiopia, built between 1990 and 2012 (left); and the analysis of a 10-hectare locale in Paris, France (right).
Goal 11: Make cities and human settlements inclusive, safe, resilient and sustainable

- **Locales** are defined as a set of city blocks surrounded by streets, and bounded by the medians of all blocks that intersect the randomly selected 10-hectare circle (see figure 1). Blocks are considered built-up if more than half of the block is built-up.
- The share of the land in streets in the locale is then calculated as the ratio of the area of the locale in streets and boulevards and the total built-up area in the locale.
- The share of the land occupied streets in the locale is then calculated as the ratio of the area of the locale occupied by streets and boulevards and the total built-up area in the locale.
- The average share of land in streets in a given city is then calculated by sampling more and more locales until the variance between the shares of land in streets declines below an agreed-upon value. Using this stopping rule, it becomes possible to obtain a statistically reliable average value.\(^4\)^

\[
\text{Share of the built up area of the city that is open space in public use (\%) =} \frac{\text{Total surface of open public space} + \text{Total surface of land allocated to streets}}{\text{Total surface of built up area of the urban agglomeration}}
\]
Goal 11: Make cities and human settlements inclusive, safe, resilient and sustainable

Target Number 11.7

Indicator Number and Name: 11.7.2 Proportion of persons victim of physical or sexual harassment, by sex, age, disability status and place of occurrence, in the previous 12 months

Agency: UNODC

Has work for the development of this indicator begun?

Yes.
Following the First Global Meeting of National Focal Points of the United Nations Survey of Crime Trends and Operations of the Criminal Justice System (UN-CTS), held in Vienna on 9-11 May 2016 (78 participants from 44 countries), work has started on methodological guidelines to produce all SDG indicators based on Victimisation Surveys (VS) or similar tools. In this framework, a review of national practices to produce SDG indicators based on VS was undertaken. As part of this exercise, information on national experiences to collect data on physical and/or sexual harassment has also been collected.

Who are the entities, including national and international experts, directly involved and consulted in developing the methodology and/or data collection tools?

The network of UN-CTS National Focal Points will be directly involved in developing and testing the data collection methodology. This network is formed of national representatives - appointed by Member States – from either National Statistical Offices or other government agencies directly involved in the production and dissemination of statistical data on crime and criminal justice. Other international agencies (incl. UN-Habitat, UN Women, UNFPA, WHO, UIS-UNESCO) and individual experts will also be involved.

What is the involvement of or how do you plan to involve National Statistical Systems in the development of the methodology?

Through the UN-CTS Focal Point Network, a group of volunteer countries will be directly involved in developing the methodology. The involvement of National Statistical Offices with experience in conducting Victimisation Surveys (or similar surveys) will be actively encouraged.

Please briefly describe the process of developing the methodology for the indicator

Three steps are envisaged:
1. On the basis of the International Classification of Crime for Statistical Purposes (ICCS), develop an operational definition of physical and sexual harassment. While harassment involves behaviours meant to intimidate or offend their victims, it is necessary to identify more precisely the set of behaviours and their circumstances to be considered as harassment.
2. Test possible set of questions to investigate harassment in a number of countries and analyse results
3. Based on testing results, agree on a survey module on physical and/or sexual harassment to be included in victimisation surveys or similar tools.

Please indicate new international standards that will need to be proposed and approved by an intergovernmental process (such as UNSC) for this methodology.

The new international standard will include a survey module and related methodological guidelines. The review and endorsement by the UN-CTS Focal Point Network is envisaged.
Goal 11: Make cities and human settlements inclusive, safe, resilient and sustainable

When do you expect the methodological work on this indicator to be completed?

Subject to the availability of financial resources, the methodological work on the indicator is expected to be completed by the end of 2018.

Are data and metadata already being collected from the National Statistical System for one or more components of this indicator?

Yes.

If yes, please describe:

As described above, an ad-hoc collection of national practices was conducted, also with assistance from the UNODC-INEGI Centre of Excellence on Crime Statistics.

How do you plan to collect the data?

The data will be collected through the annual data collection on crime and criminal justice (UN-CTS), currently under review to include SDG indicators.

If the indicator involves multiple components from different data sources, please describe how each individual component of the indicator will be collected here.

Not applicable.

With what frequency is data expected to be collected?

The UN-CTS is implemented annually, though periodicity of national data is highly variable.

Is there a process of data validation by countries in place or planned for this indicator?

Yes.

If yes, please briefly describe:

UNODC has an established policy to ask Member States to validate the compiled data through their identified national institutions. Comments received from Member States if any are dealt with and resolved through one to one communication with the responsible entities in the Member States before data are published.
Goal 11: Make cities and human settlements inclusive, safe, resilient and sustainable

Target number: 11.a

Indicator Number and Name: Indicator 11.a.1: Proportion of population living in cities that implement urban and regional development plans integrating population projections and resource needs, by size of city

Agency: UN-Habitat

Has work for the development of this indicator begun? Yes

Who are the entities, including national and international experts, directly involved and consulted in developing the methodology and or data collection tools?

"Initial consultations were held between the Statistical Unit of UN Habitat and the Regional and Metropolitan Planning Unit of UN Habitat, where National Urban Policies (development, implementation) are being monitored. A draft work plan is being worked on to facilitate a larger stakeholder engagement on the refinement of the indicator. Further development of the methodology for Indicator 11.a.1 will also include expanding the repository of data collection tools, with the aim of the finalization of a fully measurable and agreed upon indicator framework. Several organizations and individuals with expertise in the areas on National and Regional Urban Policy will be invited to form an expert group to refine the proposed methodology and proposed methods.

Already strong existing organizational partnerships exist between UN Habitat, OECD, and Cities Alliance in the area of National Urban Policy. The partnership aims to coordinate work on National Urban Policy in order to capitalize on the strengths of each organization. Other organizations participating in dialogues on National Urban Policy include UNECE, UNECA, and UNCRD. Additional national and international experts on National and Regional Urban Policy will be drawn from the pool of 20 experts on National Urban Policy (nominated by UN member states and other international organizations) of the Policy Unit 3 on National Urban Policies, which was gathered in order to support the development of a knowledge base on National Urban Policies for the United Nations Conference on Housing and Sustainable Urban Development (Habitat III).

Other organizations leading in the development of this indicator methodology, such as UNFPA, will also draw on their networks in order to include in the group of experts those who have specialized interest in the indicator qualifiers; responds to population dynamics, ensures balanced regional and territorial development, and increase local fiscal space.

These existing partnership networks will be used in order to gather experts in the field of urban policy to meet for two Expert Group Meetings (EGM), one initial virtual meeting and one face-to-face EGM, both which will be used to refine and validate the proposed methodologies and methods."

What is the involvement of or how do you plan to involve National Statistical Systems in the development of the methodology?

The proposed work plan for the development of this methodology includes the formation of an expert group which will be crucial in the refinement of the methodological approach for this indicator. The team of experts will include invitations from representatives of selected National Statistical Agencies with a regional representation. This will ensure that their inputs to the methodological framework are captured, in addition to assessing the feasibility/suitability/efficiency to implement the indicator from the perspective of National Statistical agencies. In addition, the partners will organize regional workshops, where all national statistical agencies will be trained on the proposed methodology for data collection and reporting on this indicator. Where funds allow, specific in-country missions to support National Statistical Agencies will be undertaken, especially where UN Habitat already has on-
Goal 11: Make cities and human settlements inclusive, safe, resilient and sustainable

going projects. Such countries will then become centers of learning or model countries for other countries in the regions in implementing and monitoring on indicator 11.a.1.

Please briefly describe the process of developing the methodology for the indicator

"The final process of methodological development for this indicator will be based on a work plan developed and agreed upon by UN Habitat, UNFPA, and other participating organizations. The current work plan outlines two key milestones in the development of the methodology: one initial virtual EGM followed by one face-to-face EGM. The following key activities will be undertaken:

• Proposed work plan validated by participating organizations
• Expert group list finalized and experts invited to participate in expert group
• Virtual EGM held to develop initial draft of methodological framework
• Initial draft of methodology developed in partnership with partner organizations and shared with the expert group in order to gather feedback
• Based on feedback, a second draft of the methodological framework shared with expert group
• Face-to-face EGM to finalize and validate methods and methodological framework
• Methodology finalized and submitted to statistical commission.
• Indicator training materials developed and disseminated through workshops, in-country advisory missions, etc."

Please indicate new international standards that will need to be proposed and approved by an intergovernmental process (such as UNSC) for this methodology.

"The indicator is premised on a checklist of qualifiers that need to be fulfilled in order to assess the level of implementation/development of National Urban Policies. A tight methodology using score-cards has been proposed as an initial starting point, and two EGMs are expected to improve on its suitability and appropriateness. Furthermore, an objective methodology for assessing and compiling the final scores is proposed, which will involve sampling and aggregating scores from various experts on the performance of the National Urban Policies. Finally, UN Habitat has developed a global sample of cities selected from a universe of cities with global representations. This sample is derived from a national sample of representative cities that will be used for reporting city performance at the national level for all countries.

Briefly, the methodology incorporates a policy evaluation framework that assesses and tracks progress on the extent to which national urban policy or regional development plans are being developed and implemented and satisfy the following criteria as qualifiers:

a) responds to population dynamics
b) ensures balanced regional and territorial development
c) Increase local fiscal space

This process indicator places particular emphasis on the aspect of national and regional development planning that support positive economic, social and environmental links between urban, peri-urban and rural areas.

The method to quantify this indicator is based on policy analysis evaluation that can be supported by adopted policies, conventions, laws, government programs, and other initiatives that comprise a national/regional urban policy.

A National /Regional Urban Policy is broadly defined as a coherent set of decisions derived through a deliberate government-led process of coordinating and rallying various actors for a common vision and goal that will promote more transformative, productive, inclusive and resilient urban development for the long term. This standard definition will be extended and adapted to country context and may include where applicable terms such as National Urban Plan, Frameworks, Strategies, etc. as long as they are aligned with the above qualifiers. The policy analysis evaluation will consider the following
Goal 11: Make cities and human settlements inclusive, safe, resilient and sustainable

tools: baseline spatial data mapping, benchmarking, surveys, scorecard, performance monitoring and reporting, gap and content analysis."

When do you expect the methodological work on this indicator to be completed?

The initial draft of methodological work on this indicator will be completed by mid-September and submitted to the statistical commission thereafter. Any feedback will then be incorporated and the methodology finalized. A full work plan that has been jointly development by UN Habitat and UNFPA can be submitted on request.

Are data and metadata already being collected from the National Statistical System for one or more components of this indicator?

Yes

If yes, please describe:

Baseline data for this indicator is already being collected both by UN Habitat as part of the national urban policy reviews and City prosperity initiative. In addition UNFPA also has been collecting data on policies that reflect population projections. UN Habitat currently is finalizing a global database on National Urban Policy which includes available policy information on National Urban Policy for all countries globally. In addition, UN Habitat’s City Prosperity Initiative has collected city level data over the past 5 years which can be used in order to inform the qualifiers proposed for this indicator. Data for many countries is sufficient in order to be representative not just of city level trends, but also national level urbanization trends.

How do you plan to collect the data?

"Send questionnaire(s) to country, Obtain data directly from country database/website, Joint survey/compilation with national agency and international entity, • Official documents such as National Urban Plan, Frameworks, Strategies, etc. available in national or regional administrations. "

If the indicator involves multiple components from different data sources, please describe how each individual component of the indicator will be collected here.

"The indicator involves the review of National and Regional Urban Policies which will be collected directly from each country. The alignment of the policy with the proposed indicators will then be assessed. To reduce the bias of subjectivity in the overall assessment, independent policy evaluation will be undertaken by several evaluators.

With initial support of UN-Habitat and UNFPA, other UN Agencies and partners, the method to calculate this indicator will be further developed, piloted and rolled out at country level. In order to maintain the objectivity and comparability in the policy analysis, four categories of assessment will be used for each qualifier (outlined further in the proposed metadata). These categories correspond to a progressive evaluation of the extent that national and regional policies and plans integrate positive elements that contribute to the realization of the Target. Further refinement of these 5 categories will be undertaken as necessary."

With what frequency is data expected to be collected?

Data is expected to be updated every year, based on the new data that becomes available. However, global reporting will be after every two years to allow for measuring meaningful changes.
Goal 11: Make cities and human settlements inclusive, safe, resilient and sustainable

Is there a process of data validation by countries in place or planned for this indicator?

Yes

If yes, please briefly describe:

During the planned further refinement of the methodology with participating organizations and the expert group, a process of data validation will be developed and put in place. This will be documented in training manuals which will be disseminated to all national statistical agencies and relevant government departments.

If you have any additional comments that you believe would be helpful to IAEG-SDG members in analysing the work plan and methodological development of the indicator, please provide them here:

"This indicator is based on the notion that the development and implementation of National Urban Policies should support participation, partnership, cooperation and coordination of actors as well as facilitate dialogue. National Urban Policy (NUP) and Regional Development Plans (RDP) promote coordinated and connected urban development. A coordinated effort from government through a NUP or RDP provides the best opportunity for achieving sustainable urbanization and balanced territorial development by linking sectorial policies, connecting national, regional and local government policies, strengthening urban, peri-urban and rural links through balanced territorial development.

This indicator provides a good barometer on global progress on sustainable national urban policies. It serves as gap analysis to support policy recommendations. The indicator can identify good practices and policies among countries that can promote partnership and cooperation between all stakeholders. This indicator is both process oriented and aspirational and has the potential to support the validation of Goal 11 and other SDGs indicators with an urban component. The indicator has the ability to be applicable at multi jurisdictions indicators, i.e. covering a number of areas while taking care of urban challenges in a more integrated national manner.

The indicator has a strong connection to the target, addressing the fundamental spatial and territorial aspects of national urban policy in the context of urban, peri-urban and rural areas.

This indicator epitomises the universality tenet and spirit of the SDGs. It is clearly suitable for all countries and regions and can be disaggregated and/or aggregated by areas of development as explained in the methodology section of this metadata. The indicator will be suitable to assess commitment to address urban policy related challenges and respond to the opportunities that urbanization brings. It clearly responds to Goal 11 harnessing the power of urbanisation for the common good. The indicator is strongly connected to other SDGs goals and targets.

UN-Habitat had undertaken a comprehensive review of urban policies and the methodology used could form the basis for the Global State of Urban Policy and Scorecard to be published every two years. Based on the baseline developed by UN-Habitat, it would be quite doable to routinely assess the status of national urban policies and ascertain progress made by countries to develop and implement policies based on agreed qualifiers. The work will benefit from various on-going initiatives of policies review and diagnostics undertaken by OECD, UN-Habitat and World Bank. Further methodological work would be needed to identify a list of criteria that have to be satisfied in order to attribute a value to the relevant development-oriented policy (i.e. policies supporting job creation, innovation, land-use efficiency, public space, etc.).
**Goal 11: Make cities and human settlements inclusive, safe, resilient and sustainable**

Policy Connections:

This Indicator is related to several Goals and Targets, particularly the following:

- **Goal1**: Poverty Eradication, targets 1.4 and 1.5: land tenure security and resilience
- **Goal2**: Food Security, Nutrition and Agriculture, targets 2.3 and 2.a: land tenure security and urban-rural linkages
- **Goal3**: Gender, target 5.2: safety and 5.a ownership and control over land
- **Goal6**: Water, targets 6.1 and 6.2: access to drinking water and sanitation
- **Goal7**: Energy, targets 7.2 and 7.3: access to renewable energy and energy efficiency
- **Goal8**: Economic Growth and Employment, targets 8.3, 8.5 and 8.6: job creation, decent work and youth unemployment
- **Goal9**: Infrastructure and Industrialization, targets 9.1, 9.4 and 9.a: access to and upgrading and financing infrastructure
- **Goal10**: Reduce inequality – target 10.4 discriminatory laws
- **Goal11**: Sustainable Consumption and Production, target 12.5: waste management
- **Goal13**: Climate Change, target 13.1: resilience and adaptive capacity; 13.b capacity for effective climate change-related planning and management
- **Goal15**: On terrestrial ecosystems; 15.9 By 2020, integrate ecosystem and biodiversity values into national and local planning, development processes,
- **Goal16**: Peaceful Societies and Inclusive Institutions, targets 16.7 and 16.a: governmental subsidiarity and institutional capacity building, 17.b non-discriminatory laws and policies for sustainable development
- **Goal17**: on means of implementation and partnership for sustainable development; 17.14 Policy coherence for sustainable development; 17.17 Effective public, public-private and civil society partnerships, building on the experience and resourcing strategies of partnerships"
Goal 11: Make cities and human settlements inclusive, safe, resilient and sustainable

Target number: 11.b

Indicator Number and Name: "11.b.1 Proportion of local governments that adopt and implement local disaster risk reduction strategies in line with the Sendai Framework for Disaster Risk Reduction 2015-2030"

Agency: UNISDR

Has work for the development of this indicator begun? Yes

Who are the entities, including national and international experts, directly involved and consulted in developing the methodology and or data collection tools?

"Open-ended intergovernmental expert working group on indicators and terminology (OEIWG) [A/RES/69/284], comprising experts nominated by States, UN agencies and relevant stakeholders, has proposed possible indicators to measure global progress in the implementation of the Sendai Framework. The work of the OEIWG shall be completed by December 2016 and its report submitted to the General Assembly for consideration. UNISDR, as the Secretariat for the OEIWG, supports deliberation of Member States by producing technical notes addressing critical issues, including feasibility, computation methodology, data availability etc. UNISDR Scientific and Technical Advisory Group (STAG) has provided the OEIWG with technical recommendations. (Member List: https://www.unisdr.org/files/workspace/7935_stagmembers.pdf)"

What is the involvement of or how do you plan to involve National Statistical Systems in the development of the methodology?

"In most countries national disaster loss databases are established and managed by special purpose agencies including national disaster agencies, civil protection agencies, and meteorological agencies, and disaster data is collected by line ministries. Therefore, it is essential for national statistical offices (NSOs) to closely collaborate with such agencies and line ministries in charge of targeted data."

Please briefly describe the process of developing the methodology for the indicator

"The proposed indicators were reviewed and examined by other UN agencies and submitted to the IAEG process in early-July 2015. Then in late-July 2015, those indicators were again reviewed by the Expert Group Meeting, organized by UNISDR consisting of more than 60 experts from UN system, scientific and academic organizations, civil sector and private sector and submitted and examined by the Member States in the OEIWG. So far two sessions of the OEIWG were held, in September 2015 and February 2016, where Member States were deliberating proposed indicators and terminology. Additional consultation was done in June 2016, and is planned for convergence in the work in advance of the third session of the OEIWG in November 2016. UNISDR, as a secretariat for the OEIWG, has supported deliberation of Member States in collaboration with other UN agencies and academia. Related information and documents can be found on the web: http://www.preventionweb.net/drr-framework/open-ended-working-group/"

Please indicate new international standards that will need to be proposed and approved by an intergovernmental process (such as UNSC) for this methodology.

"As the Sendai Framework stipulates, any scales and types of disasters should be addressed."
Goal 11: Make cities and human settlements inclusive, safe, resilient and sustainable

The quantitative indicators should measure quality, introducing increment measurements for achievement judged by necessary criteria stipulated in the Sendai Framework.

More information can be found in the document prepared for the Second Inter-Sessional Informal consultations of the Chair (20-21 June 2016): http://www.preventionweb.net/documents/oiewg/Technical%20Collection%20of%20Concept%20Notes%20on%20Indicators.pdf

**When do you expect the methodological work on this indicator to be completed?**

The OEIWG will complete discussion by December 2016

**Are data and metadata already being collected from the National Statistical System for one or more components of this indicator?**

No

**When do you expect work to begin on developing a methodology and with which partners will your organisation work?**

"The OEIWG is currently developing indicators to measure global progress in the implementation of the Sendai Framework, which will eventually be SDG indicators. We closely work with Members of the OEIWG, with which we expect NSO must have synergies and shared responsibilities to collect data."

**How do you plan to collect the data?**

In the past countries voluntarily provided UNISDR with data and information via online-based. We have established a comparable national disaster loss database, DesInventar (http://www.desinventar.net/index_www.html). Although the current coverage exceeds 89 countries, it is expected that by 2020 all countries will build/adjust national disaster loss databases according to the recommendations and guidelines of the OEIWG. We are planning to upgrade national disaster loss database with data collection tools using the latest technologies (cloud based, API) for disaster damage data at local level, which requires quality control and technical support for across all levels of governments. Ideally the system should use a single entity for the UN system, that can serve multiple purposes and can be used by across UN agencies.

**With what frequency is data expected to be collected?**

Information on DRR strategies were collected from the biennial monitoring of progress in the Hyogo Framework for Action through the multi-stakeholder review (ended in 2015). The primary purpose of the tool is to assist countries to monitor and review their progress and challenges in the implementation of disaster risk reduction. A new online Sendai Framework Monitor will begin in 2017 and the first cycle of the biennial monitoring will be in 2017-2018. The Sendai Framework monitoring will be synchronized with SDG monitoring at the national level, to strengthen coherence and facilitate coordinated submission to ECOSOC and the UN General Assembly.

**Is there a process of data validation by countries in place or planned for this indicator?**

Each country takes primary responsibility in his data validation. UNISDR acts as a “clearing house” in charge of technical support, quality control, data aggregation, analysis of trends and patterns, and measurement of progress/reporting.
Goal 11: Make cities and human settlements inclusive, safe, resilient and sustainable

If you have any additional comments that you believe would be helpful to IAEG-SDG members in analysing the work plan and methodological development of the indicator, please provide them here:

"The proposed methodology and collection is currently under deliberation in the OEIWG. This proposal is mainly based on UNISDR analysis, experience, and knowledge built in the period under the Hyogo Framework for Action (2005-2015).

Reporting of the Hyogo Framework for Action (HFA) Monitor and the succeeding Sendai Monitor under development is only global database collecting DRR policy information, despite non-mandatory basis. 140+ countries undertook at least one cycle of self-assessment of progress in implementing the HFA during the period 2005-2015. (60 countries at start in 2007)."
Goal 11: Make cities and human settlements inclusive, safe, resilient and sustainable

Target number: 11.b

Indicator Number and Name: "11.b.2 Number of countries with national and local disaster risk reduction strategies"

Agency: UNISDR

Has work for the development of this indicator begun? Yes

Who are the entities, including national and international experts, directly involved and consulted in developing the methodology/and or data collection tools?

"Open-ended intergovernmental expert working group on indicators and terminology (OEIWG) [A/RES/69/284], comprising experts nominated by States, UN agencies and relevant stakeholders, has proposed possible indicators to measure global progress in the implementation of the Sendai Framework. The work of the OEIWG shall be completed by December 2016 and its report submitted to the General Assembly for consideration.

UNISDR, as the Secretariat for the OEIWG, supports deliberation of Member States by producing technical notes addressing critical issues, including feasibility, computation methodology, data availability etc.

UNISDR Scientific and Technical Advisory Group (STAG) has provided the OEIWG with technical recommendations.

(Member List: https://www.unisdr.org/files/workspace/7935_stagmembers.pdf)"

What is the involvement of or how do you plan to involve National Statistical Systems in the development of the methodology?

"In most countries national disaster loss databases are established and managed by special purpose agencies including national disaster agencies, civil protection agencies, and meteorological agencies, and disaster data is collected by line ministries. Therefore, it is essential for national statistical offices (NSOs) to closely collaborate with such agencies and line ministries in charge of targeted data."

Please briefly describe the process of developing the methodology for the indicator

"The proposed indicators were reviewed and examined by other UN agencies and submitted to the IAEG process in early-July 2015. Then in late-July 2015, those indicators were again reviewed by the Expert Group Meeting, organized by UNISDR consisting of more than 60 experts from UN system, scientific and academic organizations, civil sector and private sector and submitted and examined by the Member States in the OEIWG.

So far two sessions of the OEIWG were held, in September 2015 and February 2016, where Member States were deliberating proposed indicators and terminology. Additional consultation was done in June 2016, and is planned for convergence in the work in advance of the third session of the OEIWG in November 2016. UNISDR, as a secretariat for the OEIWG, has supported deliberation of Member States in collaboration with other UN agencies and academia.

Related information and documents can be found on the web: http://www.preventionweb.net/drr-framework/open-ended-working-group/

Please indicate new international standards that will need to be proposed and approved by an intergovernmental process (such as UNSC) for this methodology.

"As the Sendai Framework stipulates, any scales and types of disasters should be addressed."
Goal 11: Make cities and human settlements inclusive, safe, resilient and sustainable

The quantitative indicators should measure quality, introducing increment measurements for achievement judged by necessary criteria stipulated in the Sendai Framework.

More information can be found in the document prepared for the Second Inter-Sessional Informal consultations of the Chair (20-21 June 2016): http://www.preventionweb.net/documents/oiewg/Technical%20Collection%20of%20Concept%20Notes%20on%20Indicators.pdf

When do you expect the methodological work on this indicator to be completed?

The OEIWG will complete discussion by December 2016

Are data and metadata already being collected from the National Statistical System for one or more components of this indicator?

No

When do you expect work to begin on developing a methodology and with which partners will your organisation work?

"The OEIWG is currently developing indicators to measure global progress in the implementation of the Sendai Framework, which will eventually be SDG indicators. We closely work with Members of the OEIWG, with which we expect NSO must have synergies and shared responsibilities to collect data."

How do you plan to collect the data?

In the past countries voluntarily provided UNISDR with data and information via online-based. We have established a comparable national disaster loss database, DesInventar (http://www.desinventar.net/index_www.html). Although the current coverage exceeds 89 countries, it is expected that by 2020 all countries will build/adjust national disaster loss databases according to the recommendations and guidelines of the OEIWG. We are planning to upgrade national disaster loss database with data collection tools using the latest technologies (cloud based, API) for disaster damage data at local level, which requires quality control and technical support for across all levels of governments. Ideally the system should use a single entity for the UN system, that can serve multiple purposes and can be used by across UN agencies.

If the indicator involves multiple components from different data sources, please describe how each individual component of the indicator will be collected here.

The national government in each country takes primary responsibility in data collection and reporting in collaboration within and across levels of governments.

With what frequency is data expected to be collected?

Information on DRR strategies were collected from the biennial monitoring of progress in the Hyogo Framework for Action through the multi-stakeholder review (ended in 2015). The primary purpose of the tool is to assist countries to monitor and review their progress and challenges in the implementation of disaster risk reduction. A new online Sendai Framework Monitor will begin in 2017 and the first cycle of the biennial monitoring will be in 2017-2018. The Sendai Framework monitoring will be synchronized with SDG monitoring at the national level, to strengthen coherence and facilitate coordinated submission to ECOSOC and the UN General Assembly.
Goal 11: Make cities and human settlements inclusive, safe, resilient and sustainable

Is there a process of data validation by countries in place or planned for this indicator?

Each country takes primary responsibility in his data validation. UNISDR acts as a “clearing house” in charge of technical support, quality control, data aggregation, analysis of trends and patterns, and measurement of progress/reporting.

If you have any additional comments that you believe would be helpful to IAEG-SDG members in analysing the work plan and methodological development of the indicator, please provide them here:

"The proposed methodology and collection is currently under deliberation in the OEIWG. This proposal is mainly based on UNISDR analysis, experience, and knowledge built in the period under the Hyogo Framework for Action (2005-2015).

Reporting of the Hyogo Framework for Action (HFA) Monitor and the succeeding Sendai Monitor under development is only global database collecting DRR policy information, despite non-mandatory basis. 140+ countries undertook at least one cycle of self-assessment of progress in implementing the HFA during the period 2005-2015. (60 countries at start in 2007)."
Goal 11: Make cities and human settlements inclusive, safe, resilient and sustainable

Target number: 11.c

Indicator Number and Name: “11.c.1 Proportion of financial support to the least developed countries that is allocated to the construction and retrofitting of sustainable, resilient and resource efficient buildings utilizing local materials”

Agency: UN-Habitat

Has work for the development of this work begun?

Yes, consultations and expert group meetings are planned for the next 4 months. A list of possible partners and targeted developing countries to contribute to this indicator development has been finalized.

Who are the entities, including national and international experts, directly involved and consulted in developing the methodology and/or data collection tools?

"UN-Habitat will take the lead and will be inviting international experts from international selected agencies, selected national government and independent experts for the development of methodology and implementation of a global data collection system. So far statistical systems and experts from Kenya, Tanzania, Vietnam and Malawi have expressed interest in participating in the further development of this indicator”

What is the involvement of or how do you plan to involve National Statistical Systems in the development of the methodology?

“Selected countries have been invited to contribute to the pilot phase of further development of this indicator. Specifically countries are invited to offer the platforms for pilot testing of the questions that will cover the data collection of this indicator. In addition, NSOs will support and ensure that other line ministries that will be targeted for data and methodology development are fully included in the pilot phases.”

Please briefly describe the process of developing the methodology for the indicator

“Expert group sessions as well as other consultative processes with selected national statistical systems are ongoing as a starting point to build a list of partners and contributors. Two rounds of expert groups will be undertaken—virtual and face-to-face followed by closely working with a team of experts to pilot test the agreed questions and methodology in selected countries. A work plan for the capacity building will be developed and targeted to the countries with limited capacity. Translated tools and guides in several languages will be made available. UN-Habitat will monitor compliance for agreed standards and procedures.”

Please indicate new international standards that will need to be proposed and approved by an intergovernmental process (such as UNSC) for this methodology.

This indicator requires embedding into routine data collection processes, as such the methodology will be pilot tested in selected countries using internationally acceptable standards. The results of this exercise will ensure that the methodology for guiding and collection of data for this indicator will fulfill international standards.

When do you expect the methodological work on this indicator to be completed?

August 2017
**Goal 11: Make cities and human settlements inclusive, safe, resilient and sustainable**

Are data and metadata already being collected from the National Statistical System for one or more components of this indicator?

No

**When do you expect work to begin on developing a methodology and with which partners will your organization work?**

The work on development of the methodology is already underway for this indicator. Selected UN agencies and international organizations/universities have agreed to contribute to this process. A further list of experts has been compiled.

**How do you plan to collect the data?**

Efforts will be made to collect the data for this indicator from routine national surveys. Hence, data for this indicator will be collected from household surveys and censuses, administrative registries, local governments and electoral offices where applicable.

**If the indicator involves multiple components from different data sources, please describe how each individual component of the indicator will be collected here.**

There two or three sources that need to be combined to measure this indicator and as such efforts will be made to bring together the various partners involved in tracking financial contributions, construction and employment monitoring. The indicator will be assessed from various dimensions including disaggregation by gender and ages where applicable. Detailed data on the various dimensions will hence come from various institutions. Each national government will have the primary responsibility on data collection and validation of this indicator following a programme of capacity strengthening to selected countries to ensure uniformity in the data collection processes globally. Support will be provided to countries where capacity challenges for data collection exist.

**With what frequency is data expected to be collected?**

Every 3 years

**Is there a process of data validation by countries in place or planned for this indicator?**

Yes

**If yes, please briefly describe:**

This indicator needs data to be collected at the city and national level, and each country will lead the responsibility for the validation of its own data, but using an internationally agreed standard and procedures. UN-Habitat will be in charge of technical support, quality assurance of data, data analysis of trends and patterns and measurement of progress.

**If you have any additional comments that you believe would be helpful to IAEG-SDG members in analysing the work plan and methodological development of the indicator, please provide them here:**

Not every country has a comparable national database for the various targeted dimensions for this indicator with the same level of consistency. Hence more efforts will be placed in standardizing many of these systems of reporting.
Goal 12: Ensure sustainable consumption and production patterns

Goal 12

Target number: 12.1

Indicator Number and Name: 12.1.1 Number of countries with sustainable consumption and production (SCP) national action plans or SCP mainstreamed as a priority or target into national policies

Agency: UNEP

Has work for the development of this indicator begun?
Yes. The 10YFP secretariat has completed the first round of the global survey on national sustainable consumption and production policies and initiatives, with the objectives of taking stock of sustainable consumption and production policies and initiatives led by governmental and public institutions worldwide. The survey identifies opportunities for scaling up and strengthening the capacity of the 10YFP to respond to the needs of countries in a more targeted manner. To date, nearly 50 countries, through their national focal points, and the European Union have contributed, reporting on more than 270 national sustainable consumption and production policies and initiatives led by governments and public institutions. The results are being analysed and a full report will be issued in 2017.

The 10YFP established in 2016 a Monitoring and Evaluation Task Force to develop the 10 YFP Monitoring & Evaluation (M&E) Framework which aims to guide and measure the collective impact of the framework and its partners in supporting the shift to Sustainable Consumption and Production (SCP) patterns worldwide. The M&E framework will be in line with the adopted Rio+20 document and will inform relevant Sustainable Development Goals (SDGs) and the achievement of associated targets, taking account of relevant SDG indicators, including 12.1.1. Detailed definition, interpretation and calculation methodologies, associated data aggregation and attribution consideration, as well as relevant international references will be described in a metadata sheet for each indicator. The impact indicators to be used in this 10YFP M&E framework will, wherever practical, relate closely to SDG indicators whose achievement will be supported by activities under the 10YFP. A peer reviewed draft of this M&E framework, with input from leads and stakeholders in the 10YFP programmes, should be available in October.

These two ongoing 10YFP initiatives will also enable a better understanding of the methodology required to measure indicator 12.7.1.

Who are the entities, including national and international experts, directly involved and consulted in developing the methodology/and or data collection tools?
1) UNEP-DTIE through the 10YFP secretariat (contact people: Charles Arden-Clarke, Charles.arden-clarke@unep.org; Cecilia Lopez y Royo, Cecilia.lopezyroyo@unep.org; Luc Reuter, luc.reuter@unep.org; Patrick Mwesigye)
2) 10YFP M&E task force members
3) UNEP-DEWA contact person Jillian Campbell jillian.campbell@unep.org

What is the involvement of or how do you plan to involve National Statistical Systems in the development of the methodology?
No detailed plans at present. However, we will share the proposed indicator 12.1.1 and required datasets with the designated national focal points (NFPs) of the 10YFP, and could ask them to share them in turn with national statistical offices. We might also seek advice from UNSD on how we might do this directly with NSOs.

Please briefly describe the process of developing the methodology for the indicator
Goal 12: Ensure sustainable consumption and production patterns

The work will likely be undertaken in two stages: (i) enhancing already existing data sources to apply the current SDG indicator 12.1.1, and (ii) assessing the relevance of formulating an improved indicator to fully measure SDG target 12.1.

Stage 1: enhancing already existing data sources to measure the current SDG indicator 12.1.1: UNEP and the 10YFP will define the methodology to measure SDG indicator 12.1.1, including on definition, method of computation, interpretation, data sources and collection. This methodology will be further complemented by the results of the Global Survey on national SCP policies and initiatives and the lessons learnt through the policy components of the EU-funded SWITCH project, in particular SWITCH Med which includes supporting the development of national SCP action plans. Data and lessons will also be drawn from earlier projects on mainstreaming SCP objectives in national policy frameworks, such as poverty reduction strategies, and national SCP action plans, primarily conducted in sub-Saharan Africa. UNEP may also review the need for the development/review of guidelines supporting the achievement of the indicator; i.e. the development of the national SCP action plans. UNEP has developed guidelines for design of national SCP strategies and action plans; these guidelines highlight how such plans and strategies can be developed in different ways including by being integrated in existing national development plans or national sustainable development strategies. 10YFP national focal points (NFPs) and National Statistical Offices will be consulted wherever possible, but the time frame and human resources available for this project will limit this consultation.

Potential stage 2: assessing the relevance of formulating an improved indicator for SDG target 12.1: SDG indicator 12.1.1 counts the number of national SCP action plans; however, the indicator does not address implementation aspects and objectives of the 10YFP and thereby of target 12.1 (e.g. capacity building, financial and technical assistance, knowledge sharing, stakeholder engagement and subsequent implementation of national SCP action plans). Using this information it may be relevant to consider formulating an improved indicator to fully measure SDG target 12.1

Furthermore, the current six 10YFP programmes also deliver support relevant to achieving a number of other SDG targets, in SDG 12 and beyond. The ongoing development of the 10YFP M&E framework in the course of 2016 will provide further insight on what the 10YFP will measure and how, as well as how it can support the achievement a range of SDG targets in a number of goals.

1st Stage (August 2016 – June 2017):
- August – December 2016: Provision of methodological specifications
- September 2016 – March 2017: Analysis of the results of the global survey on national SCP policies and initiatives
- March – April 2017: Review of the methodological specifications, in light of the results of the global survey on national SCP policies
- January-June 2017: definition of recommendations to build capacity on the indicator

Potential 2nd Stage (January 2017 – December 2020):
- January – June 2017: assess the relevance of formulating an improved indicator, and using data from 10YFP M&E framework development to enhance other SDG indicators.
- June 2017 – December 2020: if applicable, implement recommendations.

Please indicate new international standards that will need to be proposed and approved by an intergovernmental process (such as UNSC) for this methodology.

It may be necessary to agree a definition for an “SCP national action plan”, and may be related to that key information that will need to be collected on implementation of the plan to enable monitoring of implementation.

When do you expect the methodological work on this indicator to be completed?
By end 2020.
Goal 12: Ensure sustainable consumption and production patterns

Are data and metadata already being collected from the National Statistical System for one or more components of this indicator? 
Yes

If yes, please describe: 
Data and lessons will also be drawn from earlier projects on mainstreaming SCP objectives in national policy frameworks, such as poverty reduction strategies, and national SCP action plans, primarily conducted in sub-Saharan Africa.

How do you plan to collect the data? 
1) Send questionnaire to country

If the indicator involves multiple components from different data sources, please describe how each individual component of the indicator will be collected here.
This is a challenge in that different elements of and SCP national action plan are within the mandate of wide range of Ministries. In the first place UNEP will attempt to collect this data via the 10YFP NFPs, but direct contact with those Ministries, or via national statistical offices may also be necessary.

With what frequency is data expected to be collected?
Yearly.

Is there a process of data validation by countries in place or planned for this indicator?
No. To be determined subsequently.

If yes, please briefly describe:
Goal 12: Ensure sustainable consumption and production patterns

Target number: 8.4 and 12.2

Indicator Number and Name:
- 8.4.1/12.2.1 Material footprint (MF) and MF per capita, per GDP
- 8.4.2/12.2.2 Domestic material consumption (DMC) and DMC per capita, per GDP

Agency: UNEP

Has work for the development of this indicator begun?

Yes. UNEP is publishing a global material flow dataset which includes the MF and DMC. The database is part of the work of the Global Material Flows working group of the International Resource Panel (IRP). The database covers 180 nations, over a time period of 40 years (1970-2010). Data is available at the UNEP online data platform UNEP Live www.uneplive.unep.org on each country page in the section ‘UNEP resources’ under the category ‘natural resources’.

Material Flows Accounting is a well-established methodology with a strong conceptual basis in physical accounting and economics. Although, UNEP does have time series data for many countries. More needs to be done to build the capacity of countries to compile material flow accounts, to report data and to be able to validate the existing data. UNEP proposes a two-pronged approach to capacity building: enhancing the accounting capabilities for DMC and MF within countries, while at the same time supporting the UNEP IRP in continuing to update the global database and encouraging countries to verify and adopt the dataset made available by UNEP to fill the gap until capacity is available in all regions and countries.

Who are the entities, including national and international experts, directly involved and consulted in developing the methodology/and or data collection tools?

UNEP, along with the EU, OECD and UNSD, are involved in this work. CISRO is also involved. The members of the IRP are also involved in developing the methodology and reviewing the database.

1) From UNEP: the 10YFP secretariat (contact people: Charles Arden-Clarke, Charles.arden-clarke@unep.org; Cecilia Lopez y Royo, Cecilia.lopezyroyo@unep.org) and UNEP-DEWA (Jillian Campbell jillian.campbell@unep.org)
2) From UNSD: The Economic Statistics Branch (Alessandra Alfieri, alfieri@un.org)
3) From EU: Statistical Office of the European Communities (Anton Steurer, Anton.Steurer@ec.europa.eu)
4) From OECD: Environment Directorate (Myriam Linster, Myriam.LINSTER@oecd.org)
5) From CSIRO: Heinz Schandl, Heinz.Schandl@csiro.au
6) Members of the IRP

What is the involvement of or how do you plan to involve National Statistical Systems in the development of the methodology?

National Statistical Offices are often responsible for the compilation of Material Flow Accounts. UNEP plans to work with the IRP to develop a global guidance document for material flow accounts (based on the Eurostat compilation guide). This approach will be piloted in countries outside of the EU and Japan. UNEP plans to also use the UNCEEA as a forum for discussing methodological issues and facilitating peer review.
Goal 12: Ensure sustainable consumption and production patterns

Please briefly describe the process of developing the methodology for the indicator

The methodology has already been developed; however, more needs to be done in terms of making the methodology more accessible to all countries and in building capacity in countries and incorporating the views of countries with less developed statistical systems into the methodology.

Deliverables
Improved methodologies for countries (including less developed statistical systems)
By June 2017: A guidance document which simplifies the current EUROSTAT methods guides, and makes it more relevant for countries outside of the EU, (notably those which have economies where resource extraction sectors are more prominent). (Aligned with the SEEA framework.)
June 2017-June 2018: Piloting in countries
By June 2018: Review of the methodologies

Global database
By end 2017: Update and extension of the current UNEP material flow and resource productivity database in time for reporting to UNEA-3 in 2017.

Please indicate new international standards that will need to be proposed and approved by an intergovernmental process (such as UNSC) for this methodology.

It is likely that UNEP would be interested in seeking approval from the UNSC of the methodology. (Or at least the methodology should be brought up for discussion at the UNSC – probably in 2018.)

When do you expect the methodological work on this indicator to be completed?
By 2020

Are data and metadata already being collected from the National Statistical System for one or more components of this indicator?
Yes

If yes, please describe:
The EU member countries and Japan report material flow accounts which are directly used in the UNEP database. For countries in Asia and the Pacific, Latin America and the Caribbean and Eastern Europe, Caucasus and Central Asia, UNEP has constructed material flow accounts using data available in global databases (primarily, global databases which include official national data are utilized, including the UN COMTRADE database, the UN National Accounts database, FAO database and the IEA database; however, some non-official sources of data are also used, such as the United States Geological Services data and British Geological Survey). For Africa, UNIDO has pioneered material flow accounting using methodology consistent with the methodology that UNEP has employed.

How do you plan to collect the data?
Through the work of the IRP which includes data submitted by and collected from countries.

If the indicator involves multiple components from different data sources, please describe how each individual component of the indicator will be collected here.
Goal 12: Ensure sustainable consumption and production patterns

UNEP will continue to utilise the existing official databases maintained by UNSD and others. It is not practical to send questionnaires to countries to request duplicate information which they are already providing to the UN System.

**With what frequency is data expected to be collected?**

Annually; however, the database will only be updated every few years up until 2020.

**Is there a process of data validation by countries in place or planned for this indicator?**

Through the IRP there is a validation process; however, the process for involving each country will be determined subsequently.

**If yes, please briefly describe:**
Goal 12: Ensure sustainable consumption and production patterns

Target number: 12.3

Indicator Number and Name: 12.3.1 Global Food Loss Index

Agency: FAO

Has work for the development of this indicator begun? Yes

Who are the entities, including national and international experts, directly involved and consulted in developing the methodology and/or data collection tools?

No entities or countries were involved or consulted in the estimation methodology (and the Global Strategy guidelines are not a data collection tool).

What is the involvement of or how do you plan to involve National Statistical Systems in the development of the methodology?

The methodology will be presented to as many national statistical offices as possible (through regional workshops) and the results of this peer review process will be taken into account.

Please briefly describe the process of developing the methodology for the indicator

F.A.O. collects and/or imputes agricultural/food loss data in the framework of the Food Balance Sheets compilation. A new more statistically sound methodology for imputation of loss has recently been completed and is being tested and refined. The new imputation model will generate loss imputations for each single food-related commodity for all countries for a given year, for a number of relevant years, at the primary level of the supply-utilization account (the primary commodity of the commodity-tree). The losses per country are aggregated at producer price-weighted quantities to give a total agricultural/food loss per country for each relevant year. Then an index is calculated for each country using the Laspeyres formula (for volumes) for a given base period. The indices are then aggregated by geo-economic, or other, macro-areas using the appropriate weights (price weighted agricultural food-related production quantities; i.e. to reflect the share of that country in the macro-area aggregate). The same procedure can also produce a global index.

Please indicate new international standards that will need to be proposed and approved by an intergovernmental process (such as UNSC) for this methodology.

new agreed upon concepts for agricultural/post-harvest/post-slaughter/food losses and waste (particularly what is included/excluded). Also, a clear segmentation of the production/supply chain to indicate the loss and waste parts. Accordingly, the originally proposed indicator may have to be split into two distinct indicators, one for loss and one for waste; as the data dynamics of each segment will be different.

When do you expect the methodological work on this indicator to be completed?

December 2016

Are data and metadata already being collected from the National Statistical System for one or more components of this indicator?

Yes
Goal 12: Ensure sustainable consumption and production patterns

If yes, please describe:

The loss model works on the supply side of the food balance sheets (production & imports, basically). Agricultural production data are collected from each country through an annual questionnaire. The latest questionnaire now also includes a section on agricultural loss of the main primary food-related commodities. Trade data (specifically agricultural imports) are collected annually from each country through UNSD. Producer prices are likewise collected form each country by means of annual questionnaires.

How do you plan to collect the data?

Send questionnaire(s) to country, Obtain data directly from country database/website, in absence of data imputations are generated using the model previously described

If the indicator involves multiple components from different data sources, please describe how each individual component of the indicator will be collected here.

"- Agricultural production data, and related producer prices, collected from National Statistical Office or Ministry of Agriculture/Animal Husbandry through annual questionnaires
  - Agricultural import data are collected from the national customs offices through UNSD"

With what frequency is data expected to be collected?

Annually

Is there a process of data validation by countries in place or planned for this indicator?

Yes

If yes, please briefly describe:

A validation process has yet to be clearly defined with the concordance of countries; but, in general, any imputed agricultural production and import quantities (a high share of these data are official) , as well as the imputed loss quantities, will be shared with the countries for their review and 'approval' before the indicator is calculated. This can be achieved through regional workshops, remote video-conferencing/communication, missions to countries - with due consideration to costs and burdens.

If you have any additional comments that you believe would be helpful to IAEG-SDG members in analysing the work plan and methodological development of the indicator, please provide them here:

The name and description of the indicator would have to perhaps be modified based on the agreed upon concepts and definitions and segmentation of the production/supply chain. In addition, the indicator would accordingly be split into two distinct indicators (one for loss, one for waste).
Goal 12: Ensure sustainable consumption and production patterns

Target number: 12.4

Indicator Number and Name: 12.4.2 Hazardous waste generated per capita and proportion of hazardous waste treated, by type of treatment

Agency: UNEP, UNSD

Has work for the development of this indicator begun?

Yes

Who are the entities, including national and international experts, directly involved and consulted in developing the methodology/and or data collection tools?

UNSD - Environment Statistics Section
United Nations Environment Programme (UNEP) and the Secretariat of the Basel, Rotterdam and Stockholm Conventions (BRS Secretariat)
OECD
Eurostat

UNSD consults with the BRS Secretariat, OECD, and Eurostat on the concepts and definitions, as well as on the structure and content of the respective questionnaires to promote harmonization of data at the international level. [see section 6.2.6 ; data/metadata below]

What is the involvement of or how do you plan to involve National Statistical Systems in the development of the methodology?

The methodology has already been developed for the related statistics contained in the UNSD/UNEP Questionnaire, but further refinements are needed.

Under the Basel Convention on the Control of Transboundary Movements of Hazardous Wastes and their Disposal, Parties are required to submit annual national reports, which include questions about the generation of hazardous and other wastes, as well as imports and exports of hazardous and other wastes destined for reuse, recycling or recovery operations or final disposal.

Please briefly describe the process of developing the methodology for the indicator

The underlying statistics for this indicator are already collected at the international level by UNSD, BRS Secretariat, OECD and Eurostat (see section 6.2.6), however the concepts and definitions behind these statistics are not all described by internationally agreed methodologies and are not fully harmonized among these entities.

Conceptual and methodological problems of statistics on solid waste have been identified for a long time. International organisations (such as UNSD, OECD, Eurostat, BRS Secretariat, and UNECE) have been aware of these issues and have been discussing them, but due to the complexity of the subject it is common knowledge that more work needs to be done. UNSD and the BRS Secretariat plan to continue these discussions with the partner organizations to promote further understanding and harmonization.

Please indicate new international standards that will need to be proposed and approved by an intergovernmental process (such as UNSC) for this methodology.
Goal 12: Ensure sustainable consumption and production patterns

When do you expect the methodological work on this indicator to be completed?

By end of 2017

Are data and metadata already being collected from the National Statistical System for one or more components of this indicator?

Yes

If yes, please describe:

UNSD Environment Statistics Section collects data from official national sources for water and waste statistics through its biennial UNSD/UNEP Questionnaire on Environment Statistics from non OECD/Eurostat countries. Data for OECD and Eurostat countries are collected through the biennial OECD/Eurostat Questionnaire that is consistent with the UNSD/UNEP Questionnaire, so data are comparable. The terms and definitions used in both the UNSD/UNEP Questionnaire and the OECD/Eurostat Questionnaire are mostly identical with those used by other sources, and where not, bridges or correspondence are developed where possible. For the number of responses to the UNSD/UNEP Questionnaire reference should be made to Part I of the Background Document to the Report of the Secretary-General on Environment Statistics (E/CN.3/2016/27) (http://unstats.un.org/unsd/statcom/47th-session/documents/BG-2016-27-EnvironmentStats-E.pdf)

The statistics collected by UNSD through the UNSD/UNEP Questionnaire that can be used to produce this indicator are presented below. The number of responses to the UNSD/UNEP Questionnaire for the year 2012 is in brackets for UNSD.

OECD/Eurostat also collects these statistics which are harmonized conceptually with those collected by UNSD therefore promoting internationally comparable data.

Countries that are Parties to the Basel Convention on the Control of Transboundary Movements of Hazardous Wastes and Their Disposal submit through the BRS Secretariat, an annual report on activities undertaken to meet certain obligations under the Convention. Data of relevance for developing the methodology for this indicator is:

- Amount of hazardous wastes generated
- Amount of hazardous wastes imported and exported for the purpose of environmentally sound disposal and the disposal method use.

The UNSD/UNEP Questionnaire uses the definition of hazardous waste provided in the Basel Convention. Furthermore, Parties have specific obligations to transmit notifications of national definitions of “hazardous wastes” that are additional to the wastes listed in the Annexes of the Convention, thereby expanding the scope of the Convention. The definitions of hazardous and other wastes therefore may differ from one country to another.

The data collected by the BRS Secretariat is not fully aligned statistically with those collected by UNSD. At the national level, the data is typically collected through the ministry of environment or other ministry in charge of waste management and not by the national statistical office.

The Basel Convention does not provide a definition of the term “treatment” but provides, in Annex IV to the Convention, a list of operations for the disposal and recovery of hazardous wastes.

Data on the generation of hazardous waste has been collected by the BRS Secretariat, however, the revised reporting format to be used as of 2016 provides that submission of data on waste generation is optional, which may reduce the number of submissions for this question.
Goal 12: Ensure sustainable consumption and production patterns

UNSD/UNEP Questionnaire Table R2

Below you can find the statistics collected by UNSD that can be used to produce this indicator, some of which are available on the UNSD website: [http://unstats.un.org/unsd/environment/qindicators.htm](http://unstats.un.org/unsd/environment/qindicators.htm). The number of responses for the year 2012 is in brackets for UNSD and OECD/Eurostat. Eurostat make them available on its website.

Related questionnaire statistics

- R2.2 Hazardous waste generated (23 to UNSD + 33 to OECD/Eurostat)
- R2.5 Hazardous waste treated or disposed of during the year (19 to UNSD + ??? to OECD/Eurostat) (R2.2 + Imports – Exports)
- R2.6-10 Amounts going to the different types of treatment:
  - Recycling (19 to UNSD + 31 to OECD/Eurostat)
  - Incineration (18 to UNSD + 31 to OECD/Eurostat)
  - Incineration with energy recovery (8 to UNSD + 31 to OECD/Eurostat)
  - Landfilling (18 to UNSD + 31 to OECD/Eurostat)
  - Other (12 to UNSD + ??? to OECD/Eurostat)

This SDG indicator is actually comprised of many different indicators. For the first indicator, hazardous waste generated per capita, UNSD would need to obtain population data from another database.

Hazardous waste generated per capita = \frac{R2.2}{Population}

For the second indicator, proportion of hazardous waste treated, by type of treatment, UNSD collects all statistics needed.

The indicator 12.4.2 also uses the terms “waste treated” and “type of treatment”, which are not defined in the Basel Convention. Parties to the Basel Convention submit data on transboundary movements of hazardous and other wastes for the purpose of disposal operations, listed in Annex IV, through their national reports. Clarification would therefore be required as to how the Parties to the Convention understand these terms and the kind of information should be collected with respect to this indicator. Following this clarification, it is suggested that through the collaborative efforts between UNSD and the BRS Secretariat, terminology of “treatment” will be aligned to the Basel Convention.

As disposal (landfilling) is not considered a treatment, and incineration with energy recovery is a subset of incineration, UNSD would propose to have the following two indicators.

Hazardous waste recycled = \frac{R2.6}{R2.7}

Hazardous waste incinerated = \frac{R2.7}{R2.5}

Because it can be difficult to be treated, hazardous waste is sometimes exported to another country to be treated. Therefore it is important to take that into account to calculate the proportion that is treated in the country. Of course this is not a perfect indicator, as exporting hazardous waste to have it landfilled in another country would increase the proportion of hazardous waste treated in the country where it was generated. Data on export of Hazardous Waste can be provided by the BRS Secretariat.

BR Secretariat collects information on amounts of hazardous waste exported for disposal. This data could be factored into the methodology to obtain a balanced indication of proportion of hazardous treated.

**How do you plan to collect the data?**

Send questionnaire(s) to country
Other: OECD, EUROSTAT, BRS
Goal 12: Ensure sustainable consumption and production patterns

If the indicator involves multiple components from different data sources, please describe how each individual component of the indicator will be collected here.

With what frequency is data expected to be collected?

Data are already being collected every two years. [see section 6.2.6; data/metadata above]
Data is collected annually under the Basel Convention.

Is there a process of data validation by countries in place or planned for this indicator?

Yes

If yes, please briefly describe:

To promote data quality assurance UNSD carries out extensive data validation procedures that include built-in automated procedures, manual checks and cross-references to national sources of data. Communication is carried out with countries for clarification and validation of data. UNSD does not make any estimation or imputation for missing values so the number of data points provided are actual country data. Only data that are considered accurate or those confirmed by countries during the validation process are included in UNSD’s environment statistics database and disseminated on UNSD’s website.

If you have any additional comments that you believe would be helpful to IAEG-SDG members in analysing the work plan and methodological development of the indicator, please provide them here:

Data for the underlying statistics for this indicator are already collected from the countries (NSO and Ministry of Environment). Moreover, there is no intention to increase the frequency of the UNSD/UNEP Questionnaire due to lack of resources and data, and the fact that the Questionnaire is aligned to that of OECD/Eurostat, which is also conducted every two years.

Data under the national reporting to the Basel Convention is collected on the annual basis. Given that from 2016 the submission of data on hazardous waste generation became optional, guidance on this issue as well as guidance on the interpretation of the terminology used in the indicator 12.4.2 to be aligned with the Basel Convention, will be sought from the Conference of the Parties to the Basel Convention which will take place in April 2017.

The collaborative efforts among UNSD, BRS Secretariat and other partners could focus on:
- Harmonization of terminology and encouraging cooperation at the national level between national statistical offices that submit data to the UNSD/UNEP questionnaire and the Ministries of Environment which submit data as part of the national reports under the Basel Convention to the BRS Secretariat.
- Both data sets should be viewed as complementary (e.g. in terms of number of countries reporting) and can be used for quality check.

Target number: 12.5

Indicator Number and Name: 12.5.1 National recycling rate, tons of material recycled

Agency: UNSD, UNEP

Has work for the development of this indicator begun? Yes
Goal 12: Ensure sustainable consumption and production patterns

Who are the entities, including national and international experts, directly involved and consulted in developing the methodology and or data collection tools?

UNSD - Environment Statistics Section
OECD
Eurostat
UNEP – BRS Secretariat (Secretariat of the Basel, Rotterdam and Stockholm Conventions)

UNSD consults with OECD, Eurostat and the BRS Secretariat on the concepts and definitions, as well as on the structure and content of the respective questionnaires to promote harmonization of data at the international level. [see section 6.2.6]

What is the involvement of or how do you plan to involve National Statistical Systems in the development of the methodology?

The methodology has already been developed for the related statistics contained in the UNSD/UNEP Questionnaire, but further refinements are needed.

Data collected by the UNSD/UNEP Questionnaires on municipal waste recycling as a proxy, can be complemented by data submitted by the Parties to the Basel Convention through their national reports on those wastes that are subject to transboundary movements for the purpose of disposal operations.

Please briefly describe the process of developing the methodology for the indicator

To produce this indicator, two statistics seem to be required: Total waste recycled and Total waste generation.

UNSD, through its UNSD/UNEP Questionnaire on Environment Statistics (waste section), collects data on Total waste generation. The definition of this statistic originates from the OECD/Eurostat Joint Questionnaire.

However, for the second statistic, Total waste recycled, no data are currently being collected. Data on waste recycled are collected as part of the treatment of municipal waste and hazardous waste. However, there is an overlap between the two. Moreover, non-hazardous industrial waste is not represented in these two categories.

The meaning of the term “recycling” will benefit from being clarified for the purpose of the Basel Convention: whether it is understood as only encompassing the recycling operations listed in part B of Annex IV (i.e. R-3 R5 operations) or whether it is understood as encompassing all operations falling within the scope of part B of Annex IV. Guidance from the Conference of the Parties will be sought in May 2017.

It would be necessary to continue the methodological development in collaboration with OECD and Eurostat if the objective is to have an indicator about the total waste recycling rate.

As a practical solution it is possible to use the municipal waste recycling rate as a proxy. Even though municipal waste represents only a small part of the total waste, especially in developing countries where municipal waste collection is not available outside of the main cities, there are some advantages to using it. Data are already being collected by UNSD on municipal waste collected, municipal waste managed (municipal waste collected plus imports minus exports), and municipal waste recycled through the UNSD/UNEP Questionnaire on Environment Statistics. Moreover, because municipal waste collected or municipal waste managed is easier to obtain than waste generation, the indicator wouldn't rely as much on estimates. Last but not least, statistics about the municipal waste recycling rate will help countries to assess whether they need to build new waste treatment facilities.
Goal 12: Ensure sustainable consumption and production patterns

Are data and metadata already being collected from the National Statistical System for one or more components of this indicator?

Yes

If yes, please describe:

UNSD Environment Statistics Section collects data from official national sources for water and waste statistics through its biennial UNSD/UNEP Questionnaire on Environment Statistics from non OECD/Eurostat countries. Data for OECD and Eurostat countries are collected through the biennial OECD/Eurostat Questionnaire that is consistent with the UNSD/UNEP Questionnaire, so data are comparable. The terms and definitions used in both the UNSD/UNEP Questionnaire and the OECD/Eurostat Questionnaire are mostly identical with those used by other sources, and where not, bridges or correspondence are developed where possible. For the number of responses to the UNSD/UNEP Questionnaire reference should be made to Part I of the Background Document to the Report of the Secretary-General on Environment Statistics (E/CN.3/2016/27) (http://unstats.un.org/unsd/statcom/47th-session/documents/BG-2016-27-EnvironmentStats-E.pdf)

The statistics collected by UNSD through the UNSD/UNEP Questionnaire that can be used to produce this indicator are presented below. The number of responses to the UNSD/UNEP Questionnaire for the year 2012 is in brackets for UNSD.

OECD/Eurostat also collects these statistics which are harmonized conceptually with those collected by UNSD therefore promoting internationally comparable data.

UNSD/UNEP Questionnaire Table R1 and R3

If the goal is to have an indicator representing all waste, then so far UNSD is only able to provide data for the total waste generation, but not for the total waste recycled.

- R1.8 Total waste generation (25 to UNSD + ??? to OECD/Eurostat)

Indicator = \( \frac{\text{Total waste recycled}}{R1.8} \)

If Municipal waste is used as a proxy, UNSD can provide the two underlying statistics for the indicator. However, the response rate to the questionnaire is very low due to the lack of resources and data in the countries. For the denominator, one can use the municipal waste managed or the municipal waste collected.

- R3.6 Municipal waste managed in the country (23 to UNSD + ??? to OECD/Eurostat)
- R3.7 Municipal waste recycled (18 to UNSD + ??? to OECD/Eurostat)

Indicator = \( \frac{R3.7}{R3.6} \)

Or

- R3.3 Municipal waste collected (40 to UNSD + ??? to OECD/Eurostat)
- R3.7 Municipal waste recycled (18 to UNSD + ??? to OECD/Eurostat)

Indicator = \( \frac{R3.7}{R3.3} \)

How do you plan to collect the data?

Send questionnaire(s) to country,
Other: OECD/Eurostat from NSO and Ministry of Environment
Goal 12: Ensure sustainable consumption and production patterns

With what frequency is data expected to be collected?

Data are already being collected every two years. [see section 6.2.6]

Is there a process of data validation by countries in place or planned for this indicator?

Yes

If yes, please briefly describe:

To promote data quality assurance UNSD carries out extensive data validation procedures that include built-in automated procedures, manual checks and cross-references to national sources of data. Communication is carried out with countries for clarification and validation of data. UNSD does not make any estimation or imputation for missing values so the number of data points provided are actual country data. Only data that are considered accurate or those confirmed by countries during the validation process are included in UNSD’s environment statistics database and disseminated on UNSD’s website.

If you have any additional comments that you believe would be helpful to IAEG-SDG members in analysing the work plan and methodological development of the indicator, please provide them here:

Data for the underlying statistics for this indicator are already collected from the countries (NSO and Ministry of Environment). Moreover, there is no intention to increase the frequency of the UNSD/UNEP Questionnaire due to lack of resources and data, and the fact that the Questionnaire is aligned to that of OECD/Eurostat, which is also conducted every two years.
Goal 12: Ensure sustainable consumption and production patterns

Target number: 12.6

Indicator Number and Name: 12.6.1 Number of companies publishing sustainability reports

Agency: UNEP, UNCTAD

Has work for the development of this indicator begun?
Yes.

SDG indicator 12.6.1 counts the number of companies publishing sustainability reports; however, the indicator does not address qualitative aspects of sustainability reporting or the adoption of sustainable practices by business, which is the main element addressed in SDG target 12.6.

The Member Governments of the GoF47 have formulated a request to its Secretariat, provided by UNEP and GRI, to support the development of metadata inputs for SDG indicator 12.6.1, in cooperation with UNCTAD. This request is also aligned with the Intergovernmental Working Group of Experts on International Standards of Accounting and Reporting’s call on UNCTAD (that will join UNEP as co-lead in the work associated with indicator 12.6.1) to conduct further work with a view to identifying good corporate reporting practices on the SDGs and facilitation of harmonization of sustainability reporting.

In parallel, UNCTAD and UNEP have already embarked on a collaboration that is expected to provide substantive inputs for the development of an improved indicator that measures the contribution of companies to sustainable development across the SDGs. The collaboration seeks to determine global, cross-sector indicators for corporate sustainability reporting that connect corporate reporting with the SDG global indicator framework. The objective is to enhance comparability of current reporting approaches and methodologies and to allow for better alignment of corporate activities with the SDGs. The expected outcomes include, on the one hand, facilitating the integration of sustainable practices by companies (SDG 12.6) in alignment with the SDGs and, on the other, facilitating governments’ task of follow-up and review of the SDGs through higher quality and comparable information emerging from corporate reports. The first results will be presented in an Issue Note for discussion at the 33rd session of the Intergovernmental Working Group on Experts on International Standards of Accounting and Reporting (ISAR) on 4th-6th October 2016.

Who are the entities, including national and international experts, directly involved and consulted in developing the methodology/and or data collection tools?
4) UNEP-DTIE: Elisa Tonda, Head, Responsible Industry and Value-chain Unit, elisa.tonda@unep.org
5) UNCTAD: Tatiana Krylova, Head, Enterprise Branch, tatiana.krylova@unctad.org
6) GRI
7) Governments, in particular specific Governments of the Group of Friends of Paragraph 47 (GoF47)
8) Sustainable Stock Exchanges Initiative
9) Other non-governmental organisations working in the area of sustainability reporting
10) Business (to be included in the multi-stakeholder working group in Phase 2)

What is the involvement of or how do you plan to involve National Statistical Systems in the development of the methodology?
The involvement of National Statistical Systems will be coordinated with the governments associated to this activity.

146
Goal 12: Ensure sustainable consumption and production patterns

Please briefly describe the process of developing the methodology for the indicator
UNEP proposes to address the work in two Phases: (i) providing metadata to measure the current SDG indicator 12.6.1, and (ii) formulating an improved indicator and related metadata to fully measure SDG target 12.6.

The work will be co-led by UNEP and UNCTAD, in close collaboration with GRI, implemented within a multi-stakeholder working group including other UN agencies, governments and relevant non-governmental organisations. Business representatives will be systematically associated in the second Phase of the work, but businesses willing to support Phase 1 will be welcome.

Phase 1:
Development of metadata to measure indicator 12.6.1.
As a first step, UNEP proposes to formulate the necessary definitions of terms in indicator 12.6.1 (such as providing a definition of “sustainability reports”). Secondly, it is proposed that partners map the sources of information that currently provide related data. The mapping exercise must also provide solid specifications on the metadata used to populate each source of information.

In parallel, questionnaires will be submitted to governments (using the network of the GoF47 as a reference for this initiative) to gather feedback on the suitability of definitions and data sources. On this basis, it will be possible to assess existing sources of data (if any), the potential need to implement changes to existing sources or to develop new ones.

The outcomes of this work will provide the elements for the metadata to measure indicator 12.6.1 which will be submitted through UNEP to the IAEG-SDGs.

Phase 2:
Formulation of an improved indicator for SDG target 12.6 and developing the corresponding metadata.
The concrete work plan for the second Phase will be jointly agreed by the partners in the course of Phase 1.

Please indicate new international standards that will need to be proposed and approved by an intergovernmental process (such as UNSC) for this methodology.
The potential need for new international standards will be assessed within a multi-stakeholder working group as described above.

When do you expect the methodological work on this indicator to be completed?
The work related to Phase 1 (see above) is expected to be completed by end of December 2016. The work in Phase 2 is expected to be finalised by end 2020.
The timelines for both Phases of work are as follows:
Phase 1:
August – September 2016: Definition of terms in indicator 12.6.1
September – October 2016: Mapping of data sources
October – November 2016: Distribution of questionnaires to governments (through the support of GoF47) and feedback gathering and analysis
December 2016: Formulation of metadata for indicator 12.6.1

Phase 2:
To be determined with partners by end 2016
Goal 12: Ensure sustainable consumption and production patterns

Are data and metadata already being collected from the National Statistical System for one or more components of this indicator?
National Statistical Systems are currently not collecting data or metadata for this indicator. However, a number of relevant sources of information on corporate sustainability reporting have been developed, as described below.

If yes, please describe:
Indicatively, the following data sources will be taken into consideration, at a minimum:
- ‘SDG Target 12.6 Live Tracker’ of GRI
- GRI data registry: http://database.globalreporting.org/reports
- ‘Sustainability Code Database’ of the German Council for Sustainable Development
- Corporate Knights annual Global Indexes
- Registries, indexes and databases by industry regulators such as business associations and stock exchanges

How do you plan to collect the data?
The data collection methods will emerge from a multi-stakeholder consultative process as described above. Indicatively, the data sources listed above and other, similar sources are expected to contribute to the data collection.

If the indicator involves multiple components from different data sources, please describe how each individual component of the indicator will be collected here.
The current indicator 12.6.1 does not involve multiple components. However, and pending multi-stakeholder consultations, it is possible that an enhanced indicator emerging from Phase 2 might involve multiple components from different data sources. A description of how to eventually collect data for each of the components might therefore be necessary only for Phase 2.

With what frequency is data expected to be collected?
Indicatively, it is expected that data is collected on an annual basis. Taking into account publication dates of sustainability reports, the proposal developed by end of 2016 will recommend an ideal time in the year to collect information on indicator 12.6.1.

For the improved indicator which will be developed during Phase 2, the frequency of data collection may be different and will emerge from the work of the multi-stakeholder working group as described above.

Is there a process of data validation by countries in place or planned for this indicator?
Yes (planned).

If yes, please briefly describe:
As described above (see Phase 1), governments associated to the multi-stakeholder working group will be consulted throughout the metadata development process on the suitability of the metadata and the collection method. It is expected that the final metadata will be validated by all associated governments.

In addition, UNEP is currently preparing the project “Enhancing capacities to manage information from corporate sustainability reporting in Latin American countries”, which is planned to be implemented from 2017-2019. The project will support specific governments of the Group of Friends of Paragraph 47 in implementing and measuring SDG target 12.6 by consolidating data from sustainability reporting at national level. Indicatively, the project could test data collection methods emerging from Phase 1. The project and Phase 2 of the methodological work will take place in parallel and both processes have strong potential to mutually provide valuable inputs, with the project constituting an opportunity to test the application of potential new indicators.
Goal 12: Ensure sustainable consumption and production patterns

Target number: 12.7

Indicator Number and Name: 12.7.1 Number of countries implementing sustainable public procurement policies and action plans

Agency: UNEP

Has work for the development of this indicator begun?
Yes.
Thanks to the ongoing project on the 2016 Global SPP Review, National Focal Points in charge of SPP policies have been identified in 55 countries. A survey has been designed and shared with the national focal points to assess the progress of SPP policies among member States. The results of the Survey will allow us to better understand how we could measure indicator 12.7.1.

Who are the entities, including national and international experts, directly involved and consulted in developing the methodology and/or data collection tools?
1) UNEP-DTIE: Farid Yaker, Programme Officer, SPP farid.yaker@unep.org, Martina Otto martina.otto@unep.org; Elisa Tonda elisa.tonda@unep.org
2) ICLEI-Local Governments for Sustainability and Korea Environmental Industry & Technology Institute (KEITI)
3) Aure Adell from Eco-Institut Barcelona
4) Anastasia O’Rourke from Industrial Economics, Inc. Members of the 10YFP on SPP Multistakeholder Advisory Committee

What is the involvement of or how do you plan to involve National Statistical Systems in the development of the methodology?
For the moment, we do not see a role for National Statistical Systems as the sub-indicators that will be surveyed are not part of the national systems. We would be pleased however, to share our work with representatives from the National Statistical Systems.

Please briefly describe the process of developing the methodology for the indicator
The work will be undertaken in the framework of a working group to be set up by the 10YFP SPP Programme. This Group would integrate the members of the 2016 Global SPP review Scientific Committee: ICLEI-Local Governments for Sustainability and Korea Environmental Industry & Technology Institute (KEITI), Aure Adell from Eco-Institut Barcelona and Anastasia O’Rourke from Industrial Economics, Inc.
The Group will receive methodological support from UNEP’s SDG Information and Knowledge management Unit (Division of Early Warning and Assessment, Scientific Assessment Branch).
The Group will propose a set of measurable criteria and cut off values (composite index) that should allow to decide whether a country is implementing an SPP policy or not. These criteria will be derived from the results of the Global review survey and questionnaire as well as through further interaction with SPP stakeholders and policy makers in countries where SPP policies and action plans are being or will be implemented.
Examples of criteria: the SPP policy and action plans exist and are periodically reviewed, SPP criteria have been developed for X product groups, Y procurers have been trained on SPP, the legal framework includes SPP provisions, dedicated civil servants are in charge of implementing the policy, etc.
Approval of the concept note by the MAC – July-September 2016
Selection of a lead and signing of funding agreement – September-October 2016
Drafting of the Group’s report – October-December 2016
Goal 12: Ensure sustainable consumption and production patterns

Please indicate new international standards that will need to be proposed and approved by an intergovernmental process (such as UNSC) for this methodology.

N/A

When do you expect the methodological work on this indicator to be completed?
By December 2016

Are data and metadata already being collected from the National Statistical System for one or more components of this indicator?
No

If yes, please describe:

How do you plan to collect the data?
Questionnaire to country

If the indicator involves multiple components from different data sources, please describe how each individual component of the indicator will be collected here.
All individual components should be collected at the same source, ie focal points in charge of SPP policy implementation.

With what frequency is data expected to be collected?
This will vary depending on requirements. We favour a collection every three years on the occasion of the publication of our SPP Global Review

Is there a process of data validation by countries in place or planned for this indicator?
Yes

If yes, please briefly describe:
The methodology will include a process of data provision by countries and data validation by a specific group of independent experts associated to the 10YF on SPP and hopefully the UNSC.
Goal 12: Ensure sustainable consumption and production patterns

Target number: 12.8/4.7.1

Indicator Number and Name: 12.8.1 Extent to which (i) global citizenship education and (ii) education for sustainable development (including climate change education) are mainstreamed in (a) national education policies (b) curricula (c) teacher education and (d) student assessments.

Agency:
UNESCO
Section of Education for Sustainable Development and Global Citizenship (ED/IPS/ESG)

Has work for the development of this indicator begun?
Yes.
The most important and relevant data collection mechanism that is currently in place for this indicator is the statutory monitoring process of the UNESCO Recommendation concerning Education for International Understanding, Co-operation and Peace and Education relating to Human Rights and Fundamental Freedoms (1974). The reporting guidelines for the 6th Consultation on the Recommendation (launched in June 2016) cover all key conceptual aspects of GCED and ESD, including climate change education, especially in the areas of policy, curricula, teacher education and student assessment, which correspond to the areas covered by the indicator.
The new reporting guidelines were revised by UNESCO in view of improving and simplifying their use, their relevance and alignment with the Global Indicator for Target 4.7. It is expected that these modifications, will also increase the country response rate.
The revised guidelines for country reports, which now include a questionnaire, were approved by the 199th Session of the UNESCO Executive Board and are currently being used for the collection of data, due to be submitted to UNESCO by the end of 2016.

Who are the entities, including national and international experts, directly involved and consulted in developing the methodology and or data collection tools?
UNESCO Executive Board, Member States governments.
The UNESCO Institute for Statistics as key technical partner, the Global Education Monitoring Report (GEM) team and other UNESCO entities; the Global Alliance to Monitor Learning and the Technical Cooperation Group (including its participating member states) can provide support in further developing and fine tuning the methodology and data collection tool.

What is the involvement of or how do you plan to involve National Statistical Systems in the development of the methodology?
As the questionnaire to be used as data collection tool was approved by the UNESCO Executive Board, its members were able to consult with relevant line ministries and National Statistical Systems. Through the UNESCO Institute for Statistics (UIS), the representatives of the member states, through the Technical Cooperation Group (TCG) on SDG-Education 2030 Indicators (TCG) established in May 2016 (Link to TCG: http://www.uis.unesco.org/Education/Pages/tcg-meeting-may-2016.aspx), which include the National Statistical Offices, can be consulted in the fine tuning of the methodology. TCG Members are from the same 28 countries which are members of the IAEG-SDGs. In addition, there are a number of Observer countries, international and regional organizations and civil society representatives.

Please briefly describe the process of developing the methodology for the indicator
18. Identify established statutory monitoring mechanism to be used for data collection.
20. Submit proposal of revised guidelines including questionnaire for data collection for approval of UNESCO governing body, to be used in next round of consultation on the implementation of the Recommendation.
Goal 12: Ensure sustainable consumption and production patterns

21. Adoption of revised guidelines including questionnaire and calendar for consultation / data collection exercise
22. Data collection launched through Member States consultation.
23. National reports are received and analysed.
24. Develop Education for Sustainable Development and Global Citizenship Education in policies, curriculum, teacher training and student assessment index (4.7 Index).
25. Report is submitted to UNESCO governing bodies.
26. Revise reporting guidelines towards next data collection exercise (4-year cycles).

Please indicate new international standards that will need to be proposed and approved by an intergovernmental process (such as UNSC) for this methodology.
Guidelines for the preparation of reports by Member States on the application of the Recommendation concerning Education for International Understanding, Co-operation and Peace and Education relating to Human Rights and Fundamental Freedom (1974), to be adopted for each reporting cycle by the UNESCO Executive Board.

When do you expect the methodological work on this indicator to be completed?
2016, then the process will be revised and fine-tuned for the next data collection cycle, every 4 years.

Are data and metadata already being collected from the National Statistical System for one or more components of this indicator?
Yes.

If yes, please describe:
Each Member States completes the national report in consultation with relevant line ministries and authorities.

How do you plan to collect the data?
National reports from Member States submitted to UNESCO

If the indicator involves multiple components from different data sources, please describe how each individual component of the indicator will be collected here.

With what frequency is data expected to be collected?
Every 4 years

Is there a process of data validation by countries in place or planned for this indicator?
To be defined

If yes, please briefly describe:
Goal 12: Ensure sustainable consumption and production patterns

Target number: 12.b

Indicator Number and Name: 12.b.1 Number of sustainable tourism strategies or policies and implemented action plans with agreed monitoring and evaluation tools

Agency: World Tourism Organization (UNWTO)

Has work for the development of this indicator begun?

Yes

Who are the entities, including national and international experts, directly involved and consulted in developing the methodology/and or data collection tools?

UNWTO, with the support of the UNSD, has set up the Working Group of Experts on Measuring Sustainable Tourism to advance Towards a Statistical Framework for Measuring Sustainable Tourism (MST). The Working Group of Experts reports to UNWTO’s Committee on Statistics and Tourism Satellite Account and to the UN Committee of Experts on Environmental-Economic Accounting (UNCEEA).

The Working Group of Experts met on 20-21 Oct 2016 with more than 50 representatives from Member States’ National Statistical Offices, National Tourism Administrations, and Ministries of Environment, as well as subnational administrations, the private sector, academia, civil society, tourism observatories and multilateral organizations (EEA, Eurostat, OECD, UNEP, UNSD, UNWTO, World Bank).

Before the formation of the Working Group of Experts, UNWTO’s Committee on Statistics and Tourism Satellite Account (composed of 12 elected Member States and 1 representative each from UNWTO’s Associate Members and Affiliate Members, and with the additional participation of 7 Member States as well as representatives from multilateral organizations—Eurostat, UNEP, UNSD and WTO—and private sector) produced a note that UNWTO submitted to the IAEG-SDGs on time for its 3rd meeting in Mexico City (available here). Here it was recommended that “For Target 12.b, the currently proposed indicator should be adapted to focus on measurement of the stage of implementation of the SEEA and TSA frameworks”.

What is the involvement of or how do you plan to involve National Statistical Systems in the development of the methodology?

The Working Group of Experts on Measuring Sustainable Tourism agreed that advancing Towards a Statistical Framework for Measuring Sustainable Tourism is a high priority.

It also highlighted the role of such a standards-based statistical framework to support the credibility, comparability and outreach of data and various measurement and monitoring programmes pertaining to sustainable tourism, including the Sustainable Development Goals (SDG) indicators.

The Group agreed that the core rationale for developing a statistical framework is to support the measurement of sustainable tourism in its various dimensions (economic, environmental and social) and at the relevant spatial levels (global, national, sub-national) by providing a common language and organizing structure for exploiting the richness of data already available (from statistical frameworks and infrastructures, administrative sources, etc.) and for identifying additional data that may be needed.
Goal 12: Ensure sustainable consumption and production patterns

A statistical framework for sustainable tourism is the natural evolution of and complement to the standing statistical standards on tourism statistics: the Tourism Satellite Account (TSA), based on the System of National Accounts (SNA), and the International Recommendations for Tourism Statistics (IRTS). The starting foundation towards such a framework involves bridging the economic and environmental dimensions of sustainable tourism through linking two UN standards: the TSA and the System of Environmental Economic Accounting (SEEA).

Please briefly describe the process of developing the methodology for the indicator

The Working Group of Experts on Measuring Sustainable Tourism has explicitly identified the need to link the work Towards a Statistical Framework for Measuring Sustainable Tourism to the work on SDG indicators. This relates to both to the indicators identified by the IAEG-SDGs for targets 8.9 (8.9.1 and 8.9.2), 12.b (12.b.1) and 14.7 (14.7.1) as well as to develop a “tourism theme” of complementary indicators monitoring elements not covered in the existing indicators for targets 8.9, 12.b and 14.7 and for monitoring the contribution of tourism in other targets where tourism is not explicitly mentioned but relevant.

The Working Group of Experts, with UNWTO as its secretariat, will work on a proposal to make the indicator 12.b.1 statistically operational and to allow for implementation in countries ensuring comparability and feasibility. This proposal will be rooted in the statistical framework for sustainable tourism under development. A proposal will as be made for data collection into an international database.

Please indicate new international standards that will need to be proposed and approved by an intergovernmental process (such as UNSC) for this methodology.

When do you expect the methodological work on this indicator to be completed?

It is expected that in the course of 2017 a first version of the methodological document for a statistical framework for measuring sustainable tourism could be produced and some consultation rounds.

More specifically in relation to the indicator 12.b.1, if a focus on measurement of “agreed monitoring and evaluation tools” is accepted by the IAEG-SDGs (focusing) then an agreed compilation methodology could be ready in 2017 as the relevant conceptual methodological work is largely available (TSA:RFM 2008 and SEEA 2012), possibly in the first half and coinciding with UNWTO’s International Conference on Tourism Statistics on 21-23 June 2017 (Manila, The Philippines).

If this focus is not accepted, additional methodological work on defining “sustainable tourism strategies or policies and implemented action plans” will have to be carried, possibly stretching beyond June 2017.

Are data and metadata already being collected from the National Statistical System for one or more components of this indicator?

If the indicator is to focus on determining the presence of sustainable development policies and action plans then it would not be possible to collect the information via a National Statistical System but rather via regular liaison and engagement with tourism departments and similar agencies at national level. In addition to the draw-backs from not having a statistical basis or infrastructure, and to the
Goal 12: Ensure sustainable consumption and production patterns

difficulty and time consuming process of attempting to reach an internationally definition of “sustainable tourism strategies or policies and implemented action plans”, there are implementation challenges—like the difficulty to avoid a bias in the responses as most respondents will be more inclined to give socially desirable answers (e.g. “yes” to the presence of such strategies/policies/plans) and the difficulty to verify responses as this information lies outside of the statistical system.

If the indicator is to focus on measurement of agreed monitoring and evaluation tools then connection to a National Statistical System will be present since it will reflect ongoing assessment of the extent to which statistical frameworks are being implemented at national level. This work is ongoing. The remaining questions are answered assuming that the indicator will focus on measurement of agreed monitoring and evaluation tools and thus be statistically based.

If yes, please describe:

Many countries presently compile Tourism Satellite Accounts (TSA) and SEEA based accounts.

How do you plan to collect the data?

Through an international questionnaire, possibly to become part of UNWTO’s current international questionnaire on tourism statistics that feeds its international dataset.

If the indicator involves multiple components from different data sources, please describe how each individual component of the indicator will be collected here.

With what frequency is data expected to be collected?

Annually

Is there a process of data validation by countries in place or planned for this indicator?

Yes

If yes, please briefly describe:

In line with UNWTO established procedure for data collection from countries.
Goal 13: Take urgent action to combat climate change and its impacts

Goal 13

Target number: 13.1

Indicator Number and Name: 13.1.1 Number of countries with national and local disaster risk reduction strategies

Agency: UNFCCC

Has work for the development of this indicator begun? No

How do you plan to collect the data?

Mandates under the UNFCCC and Paris Agreement

If the indicator involves multiple components from different data sources, please describe how each individual component of the indicator will be collected here.

"Current and on-going (pre and post-2020):
National adaptation plans <http://unfccc.int/6057.php>;
Submitted National Communications <http://unfccc.int/7742.php>;
National adaptation programmes of action <http://unfccc.int/7567.php>;
Intended nationally determined contributions <http://unfccc.int/8766.php>

Post-2020: Adaptation communications"

Is there a process of data validation by countries in place or planned for this indicator?

No

If you have any additional comments that you believe would be helpful to IAEG-SDG members in analysing the work plan and methodological development of the indicator, please provide them here:

"Please note amendments to indicators for this target, by agencies supporting the implementation of Goal 13, as presented a the Mexico IAEG meeting:

13.1.1 Number of countries with national and local disaster risk reduction strategies

Amended indicator 13.1.1 proposed by WMO: Reduced number of countries without operational climate services that support development and management at the local and regional level as well as national and local disaster risk reduction strategies

Note: Indicator 13.1.2 removed (same as indicator for target 1.5, which would remain)

Additional indicator proposed by UNFCCC: Number of countries with policies/strategies/plans and institutions in place which increase their ability to adapt to the adverse impacts of climate change, and foster climate resilience and low greenhouse gas emission development in a manner that does not threaten food production"
Goal 13: Take urgent action to combat climate change and its impacts

Target number: 13.1

Indicator Number and Name: "13.1.1 Number of countries with national and local disaster risk reduction strategies"

Agency: UNISDR

Has work for the development of this indicator begun? Yes

Who are the entities, including national and international experts, directly involved and consulted in developing the methodology and/or data collection tools?

"Open-ended intergovernmental expert working group on indicators and terminology (OEIWG) [A/RES/69/284], comprising experts nominated by States, UN agencies and relevant stakeholders, has proposed possible indicators to measure global progress in the implementation of the Sendai Framework. The work of the OEIWG shall be completed by December 2016 and its report submitted to the General Assembly for consideration. UNISDR, as the Secretariat for the OEIWG, supports deliberation of Member States by producing technical notes addressing critical issues, including feasibility, computation methodology, data availability etc. UNISDR Scientific and Technical Advisory Group (STAG) has provided the OEIWG with technical recommendations. (Member List: https://www.unisdr.org/files/workspace/7935_stagmembers.pdf)"

What is the involvement of or how do you plan to involve National Statistical Systems in the development of the methodology?

"In most countries national disaster loss databases are established and managed by special purpose agencies including national disaster agencies, civil protection agencies, and meteorological agencies, and disaster data is collected by line ministries. Therefore, it is essential for national statistical offices (NSOs) to closely collaborate with such agencies and line ministries in charge of targeted data."

Please briefly describe the process of developing the methodology for the indicator

"The proposed indicators were reviewed and examined by other UN agencies and submitted to the IAEG process in early-July 2015. Then in late-July 2015, those indicators were again reviewed by the Expert Group Meeting, organized by UNISDR consisting of more than 60 experts from UN system, scientific and academic organizations, civil sector and private sector and submitted and examined by the Member States in the OEIWG. So far two sessions of the OEIWG were held, in September 2015 and February 2016, where Member States were deliberating proposed indicators and terminology. Additional consultation was done in June 2016, and is planned for convergence in the work in advance of the third session of the OEIWG in November 2016. UNISDR, as a secretariat for the OEIWG, has supported deliberation of Member States in collaboration with other UN agencies and academia. Related information and documents can be found on the web: http://www.preventionweb.net/drr-framework/open-ended-working-group/"

Please indicate new international standards that will need to be proposed and approved by an intergovernmental process (such as UNSC) for this methodology.

"As the Sendai Framework stipulates, any scales and types of disasters should be addressed."
Goal 13: Take urgent action to combat climate change and its impacts

The quantitative indicators should measure quality, introducing increment measurements for achievement judged by necessary criteria stipulated in the Sendai Framework.

More information can be found in the document prepared for the Second Inter-Sessional Informal consultations of the Chair (20–21 June 2016): http://www.preventionweb.net/documents/oiewg/Technical%20Collection%20of%20Concept%20Notes%20on%20Indicators.pdf

**When do you expect the methodological work on this indicator to be completed?**

The OEIWG will complete discussion by December 2016

**Are data and metadata already being collected from the National Statistical System for one or more components of this indicator?**

No

**When do you expect work to begin on developing a methodology and with which partners will your organisation work?**

"The OEIWG is currently developing indicators to measure global progress in the implementation of the Sendai Framework, which will eventually be SDG indicators. We closely work with Members of the OEIWG, with which we expect NSO must have synergies and shared responsibilities to collect data."

**How do you plan to collect the data?**

In the past countries voluntarily provided UNISDR with data and information via online-based. We have established a comparable national disaster loss database, DesInventar (http://www.desinventar.net/index_www.html). Although the current coverage exceeds 89 countries, it is expected that by 2020 all countries will build/adjust national disaster loss databases according to the recommendations and guidelines of the OEIWG. We are planning to upgrade national disaster loss database with data collection tools using the latest technologies (cloud based, API) for disaster damage data at local level, which requires quality control and technical support for across all levels of governments. Ideally the system should use a single entity for the UN system, that can serve multiple purposes and can be used by across UN agencies.

**If the indicator involves multiple components from different data sources, please describe how each individual component of the indicator will be collected here.**

The national government in each country takes primary responsibility in data collection and reporting in collaboration within and across levels of governments.

**With what frequency is data expected to be collected?**

Information on DRR strategies were collected from the biennial monitoring of progress in the Hyogo Framework for Action through the multi-stakeholder review (ended in 2015). The primary purpose of the tool is to assist countries to monitor and review their progress and challenges in the implementation of disaster risk reduction. A new online Sendai Framework Monitor will begin in 2017 and the first cycle of the biennial monitoring will be in 2017-2018. The Sendai Framework monitoring will be synchronized with SDG monitoring at the national level, to strengthen coherence and facilitate coordinated submission to ECOSOC and the UN General Assembly.
Goal 13: Take urgent action to combat climate change and its impacts

Is there a process of data validation by countries in place or planned for this indicator?

Each country takes primary responsibility in his data validation. UNISDR acts as a “clearing house” in charge of technical support, quality control, data aggregation, analysis of trends and patterns, and measurement of progress/reporting.

If you have any additional comments that you believe would be helpful to IAEG-SDG members in analysing the work plan and methodological development of the indicator, please provide them here:

"The proposed methodology and collection is currently under deliberation in the OEIWG. This proposal is mainly based on UNISDR analysis, experience, and knowledge built in the period under the Hyogo Framework for Action (2005-2015).

Reporting of the Hyogo Framework for Action (HFA) Monitor and the succeeding Sendai Monitor under development is only global database collecting DRR policy information, despite non-mandatory basis. 140+ countries undertook at least one cycle of self-assessment of progress in implementing the HFA during the period 2005-2015. (60 countries at start in 2007)."
Goal 13: Take urgent action to combat climate change and its impacts

Target number: 13.1

Indicator Number and Name: "13.1.2 Number of deaths, missing persons and persons affected by disaster per 100,000 people"

Agency: UNISDR

Has work for the development of this indicator begun? Yes

Who are the entities, including national and international experts, directly involved and consulted in developing the methodology and or data collection tools?

"Open-ended intergovernmental expert working group on indicators and terminology (OEIWG) [A/RES/69/284], comprising experts nominated by States, UN agencies and relevant stakeholders, has proposed possible indicators to measure global progress in the implementation of the Sendai Framework. The work of the OEIWG shall be completed by December 2016 and its report submitted to the General Assembly for consideration. UNISDR, as the Secretariat for the OEIWG, supports deliberation of Member States by producing technical notes addressing critical issues, including feasibility, computation methodology, data availability etc. UNISDR Scientific and Technical Advisory Group (STAG) has provided the OEIWG with technical recommendations. (Member List: https://www.unisdr.org/files/workspace/7935_stagmembers.pdf)"

What is the involvement of or how do you plan to involve National Statistical Systems in the development of the methodology?

"In most countries national disaster loss databases are established and managed by special purpose agencies including national disaster agencies, civil protection agencies, and meteorological agencies, and disaster data is collected by line ministries. Therefore, it is essential for national statistical offices (NSOs) to closely collaborate with such agencies and line ministries in charge of targeted data."

Please briefly describe the process of developing the methodology for the indicator

"The proposed indicators were reviewed and examined by other UN agencies and submitted to the IAEG process in early-July 2015. Then in late- July 2015, those indicators were again reviewed by the Expert Group Meeting, organized by UNISDR consisting of more than 60 experts from UN system, scientific and academic organizations, civil sector and private sector and submitted and examined by the Member States in the OEIWG. Additional consultation was done in June 2016, and is planned for convergence in the work in advance of the third session of the OEIWG in November 2016. UNISDR, as a secretariat for the OEIWG, has supported deliberation of Member States in collaboration with other UN agencies and academia. Related information and documents can be found on the web: http://www.preventionweb.net/drr-framework/open-ended-working-group/

Please indicate new international standards that will need to be proposed and approved by an intergovernmental process (such as UNSC) for this methodology.

"As the Sendai Framework stipulates, any scales and types of disasters should be addressed."
Goal 13: Take urgent action to combat climate change and its impacts

The methodology proposes the collection and use of simple and uniform physical indicators of mortality (number of people) as the point of departure for computation. Time dimension should be defined when to record/report data. Methodologies and standards as well as data for “number of deaths” are very solid and robust. The number of “missing persons” is subject to legal procedures and time threshold, thus it is not consistently collected among Member States. The number of “persons affected” has same problems as those of “missing persons” but with more complexity. The definition of “persons affected” has not been universal and still under development. The OEIWG is currently discussing sub-categories of “persons affected” taking into account rationality and feasibility. Nevertheless double-counting is unavoidable in many countries and the value is a proxy, it would provide global trends and measure global progress.

More information can be found in the document prepared for the Second Inter-Sessional Informal consultations of the Chair (20-21 June 2016): http://www.preventionweb.net/documents/oiewg/Technical%20Collection%20of%20Concept%20Notes%20on%20Indicators.pdf

When do you expect the methodological work on this indicator to be completed?

The OEIWG will complete discussion by December 2016

Are data and metadata already being collected from the National Statistical System for one or more components of this indicator?

No

When do you expect work to begin on developing a methodology and with which partners will your organisation work?

"The OEIWG is currently developing indicators to measure global progress in the implementation of the Sendai Framework, which will eventually be SDG indicators. We closely work with Members of the OEIWG, with which we expect NSO must have synergies and shared responsibilities to collect data."

How do you plan to collect the data?

In the past countries voluntarily provided UNISDR with data and information via online-based. We have established a comparable national disaster loss database, DesInventar (http://www.desinventar.net/index_www.html). Although the current coverage exceeds 89 countries, it is expected that by 2020 all countries will build/adjust national disaster loss databases according to the recommendations and guidelines of the OEIWG. We are planning to upgrade national disaster loss database with data collection tools using the latest technologies (cloud based, API) for disaster damage data at local level, which requires quality control and technical support for across all levels of governments. Ideally the system should use a single entity for the UN system, that can serve multiple purposes and can be used by across UN agencies.

If the indicator involves multiple components from different data sources, please describe how each individual component of the indicator will be collected here.

The national government in each country takes primary responsibility in data collection and reporting in collaboration within and across levels of governments.

With what frequency is data expected to be collected?
Goal 13: Take urgent action to combat climate change and its impacts

Ideally hazard-by-hazard basis, at least annually

Is there a process of data validation by countries in place or planned for this indicator?

Each country takes primary responsibility in his data validation. UNISDR acts as a “clearing house” in charge of technical support, quality control, data aggregation, analysis of trends and patterns, and measurement of progress/reporting.

If you have any additional comments that you believe would be helpful to IAEG-SDG members in analysing the work plan and methodological development of the indicator, please provide them here:

"The proposed methodology and collection is currently under deliberation in the OEIWG. This proposal is mainly based on UNISDR analysis, experience, and knowledge built in the period under the Hyogo Framework for Action (2005-2015).

Not every country has a comparable national disaster loss database that is consistent with the proposed guidelines (although current coverage exceeds 89 countries). Therefore, by 2020, it is expected that all countries will build/adjust national disaster loss databases according to the recommendations and guidelines of the OEIWG."
Goal 13: Take urgent action to combat climate change and its impacts

Target number: 13.2

Indicator Number and Name: 13.2.1 Number of countries that have communicated the establishment or operationalization of an integrated policy/strategy/plan which increases their ability to adapt to the adverse impacts of climate change, and foster climate resilience and low greenhouse gas emissions development in a manner that does not threaten food production (including a national adaptation plan, nationally determined contribution, national communication, biennial update report or other)

Agency: UNFCCC

Has work for the development of this indicator begun? No

How do you plan to collect the data?

Data collected through mandates under the UNFCCC, Kyoto Protocol and Paris Agreement

If the indicator involves multiple components from different data sources, please describe how each individual component of the indicator will be collected here.

"Current and on-going (pre and post-2020):
National adaptation plans <http://unfccc.int/6057.php>;
Submitted National Communications <http://unfccc.int/7742.php>;
National adaptation programmes of action <http://unfccc.int/7567.php>;
Intended nationally determined contributions <http://unfccc.int/8766.php>;
NAPs annual progress reports, as reported to UNFCCC Subsidiary Bodies/COP;
Databases that can be found on NAP central, including a database of policies <http://www4.unfccc.int/nap>;
Reporting on REDD+ and the implementation of the Warsaw Framework for REDD+, including action plans <http://redd.unfccc.int/info-hub.html>

Post-2020: Adaptation and other communications"

Is there a process of data validation by countries in place or planned for this indicator?

No

If you have any additional comments that you believe would be helpful to IAEG-SDG members in analysing the work plan and methodological development of the indicator, please provide them here:

"Please note revisions to this indicator, as agreed by agencies supporting the implementation of Goal 13: Amended indicator 13.2.1 proposed by UNFCCC and WHO: Number of countries that have communicated the establishment or operationalization of an integrated policy/strategy/plan, which increases their ability to adapt to the adverse impacts of climate change, and foster climate resilience and low greenhouse gas emissions development in a manner that does not threaten food production or sustainable development (including a national adaptation plan, nationally determined contribution, national communication, biennial update report or other). "

163
Goal 13: Take urgent action to combat climate change and its impacts

Target number: 13.3

Indicator Number and Name: 13.3.1 Number of countries that have integrated mitigation, adaptation, impact reduction and early warning into primary, secondary and tertiary curricula

Agency: UNFCCC

Has work for the development of this indicator begun? No

How do you plan to collect the data?

Mandates under the UNFCCC and Paris Agreement

If the indicator involves multiple components from different data sources, please describe how each individual component of the indicator will be collected here.

Current and on-going (pre and post-2020): Developing countries: Biennial Update Reports and National Communications (actions undertaken following support received on capacity-building, including education, training and public awareness; National Communications; National Communications (support provided on capacity-building, including on education, training and public awareness); Developed and developing countries: Synthesis report on the implementation of the framework for capacity-building in developing countries (prepared annually);

Is there a process of data validation by countries in place or planned for this indicator?

No
Goal 13: Take urgent action to combat climate change and its impacts

Target number: 13.3

Indicator Number and Name: 13.3.2 Number of countries that have communicated the strengthening of institutional, systemic and individual capacity-building to implement adaptation, mitigation and technology transfer, and development actions

Agency: UNFCCC

Has work for the development of this indicator begun? No

How do you plan to collect the data?

Mandates under the UNFCCC and the Paris Agreement

If the indicator involves multiple components from different data sources, please describe how each individual component of the indicator will be collected here.

"Current and on-going (pre and post-2020): Developing countries: Biennial Update Reports and National Communications (actions undertaken following support received on capacity-building, including education, training and public awareness <http://unfccc.int/8722.php><http://unfccc.int/7742.php>; Developed countries: Biennial Reports <http://unfccc.int/7550.php>, National Communications <http://unfccc.int/7742.php> (support provided on capacity-building, including on education, training and public awareness); Developed and developing countries: Synthesis report on the implementation of the framework for capacity-building in developing countries (prepared annually); Summary report of The Durban Forum on capacity-building; Reports of the annual in session dialogue on Article 6 of the Convention; Report on progress achieved by Parties, admitted observer organizations and other stakeholders in implementing Article 6 of the Convention [at SBI 44, May 2016]; Submissions from IOs and UN agencies.

Post 2020: Developed and developing countries: Communications on actions and measures on capacity building to implement the Paris Agreement, including through regional, bilateral and multilateral approaches."

Is there a process of data validation by countries in place or planned for this indicator? No
Goal 13: Take urgent action to combat climate change and its impacts

Target Number: 13.a

Indicator Number and Name: 13.a.1 Mobilized amount of US dollars per year starting in 2020 accountable towards the $100 billion commitment.

Agency: UNFCCC/OECD

Background:
Developed countries have committed to a goal of mobilizing $100 billion a year in climate finance by 2020 from a wide variety of sources to address the needs of developing countries, and intend to continue this goal through to 2025. Before 2025, Parties to the UNFCCC shall set a new collective quantified goal from a floor of USD 100 billion per year.

The Green Climate Fund (GCF) was created by Parties to the UNFCCC in 2010, designed as an operating entity of the Convention’s financial mechanism. It allocates resources to low-emission and climate-resilient projects and programmes in developing countries. The GCF focusses in particular on the needs of societies that are highly vulnerable to the effects of climate change, in particular Least Developed Countries (LDCs), Small Island Developing States (SIDS), and African States. Initial resource mobilization has raised USD 10.3 billion and is ongoing. The initial capitalization of the GCF of USD 10.3 billion can be seen as substantive progress towards operationalization.

Has work for the development of this indicator begun? Partially

Who are the entities, including national and international experts, directly involved and consulted in developing the methodology/and or data collection tools?
UNFCCC/OECD

What is the involvement of or how do you plan to involve National Statistical Systems in the development of the methodology?
To be developed

Please briefly describe the process of developing the methodology for the indicator
To be developed, a revised workplan will be submitted by the end of January 2017.

Please indicate new international standards that will need to be proposed and approved by an intergovernmental process (such as UNSC) for this methodology.
There is currently no common methodology or definition of what exactly counts or not towards the USD 100 billion goal.

When do you expect the methodological work on this indicator to be completed?
Based on negotiations under the UNFCCC, this indicator and its methodology could be further updated prior to 2020. The UNFCCC Standing Committee on Finance’s recently published 2016 biennial assessment and overview of climate finance flows presents estimates of flows from developed to developing countries, available information on domestic climate finance and South-South cooperation, as well as the other climate-related flows that constitute global total climate finance flows. It considers the implications of these flows, including composition, purpose and emergent trends relevant to the UNFCCC objectives, including the new goals set out in the Paris Agreement. Further useful sources of information regarding the tracking of climate finance may be found on the UNFCCC and Green Climate Fund websites:

Goal 13: Take urgent action to combat climate change and its impacts

support needed and received). Under the Paris Agreement, developed country Parties shall biennially communicate indicative quantitative and qualitative information, including, as available, projected levels of public financial resources to be provided to developing country Parties. Other Parties providing resources are encouraged to communicate such information biennially on a voluntary basis. Developed country Parties were strongly urged to scale up their level of financial support, with a concrete roadmap to achieve the goal of jointly providing USD 100 billion annually by 2020 for mitigation and adaptation while significantly increasing adaptation finance from current levels. 

At the request of the French and incoming Peruvian UNFCCC presidencies, the OECD prepared a study in 2015 of “Climate Finance in 2013-14 and the USD 100 billion goal” in collaboration with the Climate Policy Institute. This report built on progress towards developing common climate finance definitions and accounting methodologies enabled by a group of 19 bilateral climate finance providers, multilateral development banks, the International Development Finance Club and OECD initiatives. It applied a transparent accounting framework to the most recent data available and presented preliminary partial estimates of mobilised private climate finance, in the form of private co-financing data associated with public finance interventions. The lessons learned from conducting this exercise may be helpful in informing efforts to further improve the transparency and comprehensiveness of climate finance measuring, tracking and reporting.

With what frequency is data expected to be collected?
To be developed

Is there a process of data validation by countries in place or planned for this indicator?
To be developed

If yes, please briefly describe:
To be developed

---

9 Paragraph 5, Article 9 of the Paris Agreement
10 Paragraph 5, Article 9 of the Paris Agreement
11 Decision 1/CP.21, Adoption of the Paris Agreement, para 115.
Goal 13: Take urgent action to combat climate change and its impacts

Target number: 13.b

Indicator Number and Name: 13.b.1 Number of least developed countries and small island developing States that are receiving specialized support, and amount of support, including finance, technology and capacity-building, for mechanisms for raising capacities for effective climate change-related planning and management, including focusing on women, youth and local and marginalized communities

Agency: UNFCCC

Has work for the development of this indicator begun? No

How do you plan to collect the data?

Mandates under the UNFCCC and Paris Agreement

If the indicator involves multiple components from different data sources, please describe how each individual component of the indicator will be collected here.

UNFCCC NAPs annual progress reports, as reported to UNFCCC Subsidiary Bodies/COP; Databases that can be found on NAP central, including a database of policies <http://www4.unfccc.int/nap>.

With what frequency is data expected to be collected?

Compiled annually
Goal 14: Conserve and sustainably use the oceans, seas and marine resources for sustainable development

Goal 14

Target number: 14.1

Indicator Number and Name: 14.1.1 Index of coastal eutrophication and floating plastic debris density

Agency: UNEP in cooperation with IOC-UNESCO

Has work for the development of this indicator begun?
Yes

Who are the entities, including national and international experts, directly involved and consulted in developing the methodology and or data collection tools?

1) Index of Coastal Eutrophication (ICEP):
   a. IOC-UNESCO (contact: Henrik Enevoldsen, Acting Head, IOC Ocean Science Section and Head, IOC Science and Communication Centre on Harmful Algae, h.enevoldsen@unesco.org)
   b. Sybil P. Seitzinger, Study Lead, International Geosphere-Biosphere Program (IGBP), Stockholm, Sweden, sybil.seitzinger@igbp.kva.se
   c. Emilio Mayorga, Study Collaborator and Data Point of Contact, University of Washington (UW), Seattle, USA, mayorga@apl.washington.edu
   d. GESAMP-UN Joint Group of Experts on the Scientific Aspects of Marine Environmental Protection
   e. UNEP-DEPI (contact: Christopher Cox, Christopher.cox@unep.org)
   f. UNEP-DEWA (contact: Jillian Campbell, jillian.campbell@unep.org)

2) Floating Plastic debris Density:
   a. IOC-UNESCO (contact: Julian Barbiere, J.barbiere@unesco.org, Kirsten Isensee, k.isensee@unesco.org)
   b. UNEP-DEPI (contact: Heidi Savelli, Programme Officer, Marine Litter Heidi.savelli@unep.org)
   c. Regional Seas Conventions and Action Plans (contact person: Kanako Hasegawa, kanako.hasegawa@unep.org)

What is the involvement of or how do you plan to involve National Statistical Systems in the development of the methodology?

1) Index of Coastal Eutrophication (ICEP): testing phase of the agreed draft methodologies in pilot countries in 2017 (for Chlorophyll-a concentration as an indicator of phytoplankton biomass) and data collection from countries in 2018-2020 (for Chlorophyll-a concentration as an indicator of phytoplankton biomass) and from 2021 onwards (for ICEP).

2) Floating Plastic debris Density: testing phase of the agreed methodologies in pilot countries in 2017 (for beach litter) and data collection from countries in 2018-2020 (for beach litter) and from 2021 onwards (for Floating Plastic debris Density). UNEP Live may provide a platform for country involvement with regard to data.

Please briefly describe the process of developing the methodology for the indicator

1) Index of Coastal Eutrophication (ICEP): inputs of nutrients (nitrogen, phosphorus and silica, in different forms) from rivers, and corresponding nutrient-ratio sub-indicator. There is broad consensus that this indicator will not be operational for several years. At the Mexico Meeting, a provisional sub-indicator has been proposed to replace ICEP: Chlorophyll-a concentration as an indicator of phytoplankton biomass. This is a core indicator of the Regional Seas Conventions and Action Plans and is collected by national monitoring mechanisms for Regional Seas Conventions Programmes (RSCP). However, different Regional Seas have
Goal 14: Conserve and sustainably use the oceans, seas and marine resources for sustainable development

different methodologies. It is widely monitored by HELCOM, OSPARCOM, MAP and NOWPAP. In-situ sampling and remote sensing methodologies are already in place. The methodology will develop from the Global NEWS 2 model output for river nutrient exports (loadings) to the coast (Beusen et al, 2009; Mayorga et al, 2010; Seitzinger et al, 2010), and the application of the nutrient-ratio (ICEP) indicator of coastal eutrophication potential using these nutrient loadings (defined in Garnier et al, 2010; applied for the TWAP LME project using the Global NEWS 2 data). The GEF-GNC Project has developed a nutrient management toolbox that incorporates the Global NEWS modelling for basin-scale assessments of nutrient loading to the receiving environment. Building on the baseline information contained in the TWAP assessment and other marine pollution assessment, a technical expert meeting bringing together relevant institutional partners will be organized at the end of 2016/beginning of 2017 with aim of finalizing the indicator methodology and protocols for collecting data at national scale. The alternative sub-indicator will be used in the short-term, and the methodology for ICEP will be developed and made ready by 2020.

2) Floating Plastic debris Density: the second sub-indicator refers to modelled macro and micro plastics distribution in the ocean. Relative quantities of floating micro (<4.75mm) and macro- (>4.75mm) plastics in large marine ecosystems are measured based on a model of surface water circulation and the use of proxy inputs (shipping density, coastal population density, area of impermeable catchment i.e. urban areas with rapid run-off). The Regional Seas Conventions and Action Plans have agreed on beach litter as their indicator for marine litter, and this is the alternative proposal that has been submitted to the IAEG-SDGs at its 3rd Meeting. Some of the Regional Seas have included floating plastics in their monitoring programme (OSPAR, MAP). Monitoring guidelines on beach litter and floating plastics were also developed by UNEP and IOC-UNESCO and published in 2009. The consultative process may include webinars, sessions during relevant meetings including the 43rd GESAMP Meeting (Nairobi, November 2016), the Global Regional Seas Meeting, Third Global Land-Oceans Connections Conference, SDG 14 Conference (Fiji, June 2017) and other large-scale marine litter meetings scheduled for 2017, which will bring together experts to agree on furthering the work on indicators within the framework of the Global Partnership on Marine Litter (GPML). In addition, building on the baseline information contained in the TWAP assessment and other marine pollution assessments, a technical expert meeting bringing together relevant institutional partners will be organized at the end of 2016/beginning of 2017 with aim of furthering the indicator methodology and protocols for collecting data at national scale. An ongoing discussion is led by the University of Hawaii and NASA involving e.g. UNEP on remote sensing technologies that could be relevant for marine litter. The methodology on beach litter will be ready by 2017, and the final indicator on Floating Plastics debris Density will be made ready by 2020.

Please indicate new international standards that will need to be proposed and approved by an intergovernmental process (such as UNSC) for this methodology.

Standards for accuracy of parameters to measure plastics and other types of litter, for the minimum parameters to measured, temporal and spatial coverage.

When do you expect the methodological work on this indicator to be completed?

1) ICEP: by end 2017 for alternative sub-indicator Chlorophyll-a and by end 2020 for ICEP.

Are data and metadata already being collected from the National Statistical System for one or more components of this indicator?

No

If yes, please describe:
Goal 14: Conserve and sustainably use the oceans, seas and marine resources for sustainable development

How do you plan to collect the data?

2) Send questionnaires to countries
3) Obtain data directly from country database/website
4) Joint survey/compilation with national agency and international entity
5) Satellite images, remote sensing (marine litter: once progress has been made in the above mentioned initiative, we envisage that some data may be available via remote sensing).

If the indicator involves multiple components from different data sources, please describe how each individual component of the indicator will be collected here.

1) ICEP: data on Anthropogenic Non-Point nutrients sources from agriculture can be generated from global FAO databases and national databases; Point sources from sewage discharges will be derived from national sources. Hydrology and physical factors will be derived from the Global NEWS model datasets. Smaller-scale watershed data will need to be derived from national sources.

With what frequency is data expected to be collected?

1) ICEP: to be determined (data collection for alternative sub-indicator on Chlorophyll-a will start in 2018; data collection for ICEP will start in 2021).
2) Floating Plastic debris Density: Once developed, biannually (data collection for alternative sub-indicator on beach litter will start in 2018; data collection for Floating Plastic debris Density will start in 2021).

Is there a process of data validation by countries in place or planned for this indicator?
Yes - planned

If yes, please briefly describe:

1) ICEP: to be determined (a strategy for data collection for alternative sub-indicator Chlorophyll-a concentration will be ready by early 2018; a strategy for data collection for ICEP will be ready by early 2021).
Floating Plastic debris Density: to be determined (a strategy for data collection for alternative sub-indicator on beach litter will be available by early 2018; a strategy for data collection for Floating Plastic debris Density will be ready by early 2021).
Goal 14: Conserve and sustainably use the oceans, seas and marine resources for sustainable development

Target number: 14.2

Indicator Number and Name: 14.2.1 Proportion of national exclusive economic zones managed using ecosystem-based approaches

Agency: UNEP in cooperation with IOC-UNESCO

Has work for the development of this indicator begun? Yes

Who are the entities, including national and international experts, directly involved and consulted in developing the methodology and/or data collection tools?
1) UNEP-DEPI: contact person Ole Vestergaard (ole.vestergaard@unep.org)
2) IOC-UNESCO: contact person Julian Barbiere (J.barbiere@unesco.org)
3) Regional Seas coordinators and national experts engaged in RSP Working Group on common indicators

What is the involvement of or how do you plan to involve National Statistical Systems in the development of the methodology?
Testing phase of the agreed draft methodologies in pilot countries in 2018 and data collection from countries from 2021 onwards.

Please briefly describe the process of developing the methodology for the indicator
1) First draft of methodologies: background paper (existing data/methods to measure the indicator, potential methods to measure the indicator, recommendations) by September 2016
2) Possible consultations and review of the background paper at the 18th Global Meeting of the Regional Seas Conventions and Action Plans (Seoul, Korea, September-October 2016)
3) Technical meeting with experts linked to MSP Conference (March 2017)
4) Review and feedback on paper at the SDG 14 Conference (Fiji, June 2017)
5) Finalization of draft methodologies by December 2017
6) Testing phase of agreed methodologies in pilot countries in 2018
7) Finalization of methodologies by end 2020
8) Strategy for data collection in early 2021
9) Data collection from countries from 2021 onwards.

Please indicate new international standards that will need to be proposed and approved by an intergovernmental process (such as UNSC) for this methodology.
Identification and validation of markers to assess implementation of ecosystem-based management frameworks building on existing national plans related to integrated coastal zone management, marine spatial planning, marine protected areas, marine resource management plans and other related area-based management initiative. In a second step, the development of spatially derived tracking system to assess changes in national/regional adoption and implementation of agreed defined principles of ecosystem approach.

When do you expect the methodological work on this indicator to be completed?
By end 2020.

Are data and metadata already being collected from the National Statistical System for one or more components of this indicator? Yes

If yes, please describe: proposed reporting on national progress towards Regional Seas ICZM protocols; need marker of actual implementation of ICZM plans.
Goal 14: Conserve and sustainably use the oceans, seas and marine resources for sustainable development

How do you plan to collect the data?
   6) Joint survey/compilation with national agency and international entity
   7) Regional Seas regular reporting to UNEP

If the indicator involves multiple components from different data sources, please describe how each individual component of the indicator will be collected here.
Inputs will be required from other maritime sectors, e.g. fisheries (FAO), transport (IMO), national planning agencies.

With what frequency is data expected to be collected?
3-5 year cycle

Is there a process of data validation by countries in place or planned for this indicator?
Yes - partially

If yes, please briefly describe:
Partially through Regional Seas mechanism, but needs strengthening. Probably need for a common national reporting format across regions.
Goal 14: Conserve and sustainably use the oceans, seas and marine resources for sustainable development

Target number: 14.3

Indicator Number and Name: 14.3.1 Average marine acidity (pH) measured at agreed suite of representative sampling stations

Agency: IOC-UNESCO in cooperation with UNEP

Has work for the development of this indicator begun?
Yes

Who are the entities, including national and international experts, directly involved and consulted in developing the methodology and or data collection tools?
4) IOC-UNESCO: contact person Julian Barbiere (J.barbiere@unesco.org) and Kirsten Isensee (k.isensee@unesco.org).
5) IOC-UNESCO is hosting the secretariat of the Global Ocean Acidification Observing Network (GOOS) and is one of the parent organizations of the Global Ocean Acidification Observing Network (GOA-ON). GOOS and GOA-ON are closely linked and during the past 4 years a set of chemical and physical parameters was identified to obtain information on the increasing acidity (decreasing pH) of the oceans. The Executive Council of GOA-ON, an international group of experts and intergovernmental/international organizations, meets at least once a year to further develop and define the parameters and to improve guidelines to measure the impact of ocean acidification on marine life.

What is the involvement of or how do you plan to involve National Statistical Systems in the development of the methodology?
Testing phase of the agreed draft methodologies in pilot countries in 2017 (potentially with the Regional Seas).

Please briefly describe the process of developing the methodology for the indicator
Global consultations reflecting the current human and technical capacity with regard to ocean acidification were conducted during the past three GOA-ON workshops. The chemical and physical theoretical basis is provided by peer-reviewed literature e.g. Dickson (2007) and in the GOA-ON Requirements Plan (available at www.GOA-ON.org). The set of parameters to measure and observe ocean acidification at the global level is defined by GOA-ON and GOOS. The interactive map and related metadata give some indication where and what is measured globally. (http://www.goa-on.org/GOA-ON_Activities.html). The meeting of the working group (covering 45 Countries) on ocean acidification in October will focus on how to measure the impact of ocean acidification. Discussions between the major partners leading and cooperating for this indicator as well as scientists will define the final time frame and give instructions on the parameters needed to be measured, including frequency and accuracy, at the global and regional level. Capacity development and technical transfer workshops are envisaged for 2017-2019. The short-term chemical indicator (pH) will be complemented by the indicator for the measurement of the impact of ocean acidification (on coral reefs, phytoplankton, etc.) by 2020. The next steps of the methodology will be worked with the statistical unit in UNEP (DA project contribution).

10) First draft of methodologies: background paper (oceanographic data collection and analysis (IOC-UNESCO)/existing statistical methods to measure the indicator (UNEP), potential methods to measure the indicator, recommendations) by September 2016
11) Review of the background paper at the OAICC conference in October 2016
12) Technical meeting with experts in late 2016
13) Finalization of draft methodologies by December 2016
14) Testing phase of agreed methodologies in pilot countries in 2017 (potentially with Regional Seas)
Goal 14: Conserve and sustainably use the oceans, seas and marine resources for sustainable development

15) Finalization of methodologies by end 2020.

Please indicate new international standards that will need to be proposed and approved by an intergovernmental process (such as UNSC) for this methodology. Standards - for accuracy of parameters to measure ocean acidification, for the minimum parameters to measured, temporal and spatial coverage.

When do you expect the methodological work on this indicator to be completed?
By end 2020.

Are data and metadata already being collected from the National Statistical System for one or more components of this indicator?
No

If yes, please describe:

How do you plan to collect the data?
  8) Obtain data directly from country database/website
  9) Joint survey/compile with national agency and international entity

If the indicator involves multiple components from different data sources, please describe how each individual component of the indicator will be collected here.
Inputs will be required from other maritime sectors, e.g. fisheries (FAO), transport (IMO), national planning agencies.

With what frequency is data expected to be collected?
Biannually

Is there a process of data validation by countries in place or planned for this indicator?
Yes

If yes, please briefly describe:
This process needs further development, e.g. during the technical meeting to take place autumn 2016.
Goal 14: Conserve and sustainably use the oceans, seas and marine resources for sustainable development

Target number: 14.6

Indicator Number and Name: 14.6.1 Progress by countries in the degree of implementation of international instruments aiming to combat illegal, unreported and unregulated fishing

Agency: FAO

Has work for the development of this indicator begun? Yes

Who are the entities, including national and international experts, directly involved and consulted in developing the methodology and/or data collection tools?

The indicator has been developed by the FAO Fisheries and Aquaculture Department. The FAO intergovernmental Committee on Fisheries will be appraised of the methodological work at its next meeting in July 2016.

What is the involvement of or how do you plan to involve National Statistical Systems in the development of the methodology?

The indicator will be based on FAO’s biannual survey on CCRF implementation which compiles country responses by Members on IUU fishing action plans and on ratification and implementation of the FAO Port State Measures Agreement and the FAO Compliance Agreement. It will be up to the relevant Ministry responsible for fisheries that provides the survey to FAO to coordinate with the National Statistical Authority.

Please briefly describe the process of developing the methodology for the indicator

"This indicator is calculated on the basis of the efforts being made by countries to implement key international instruments aiming to combat IUU fishing, as reported in a given year of the survey. Indicator variables

1. Development and implementation of national plan of action (NPOA) to combat IUU fishing in line with the IPOA-IUU
2. Ratification and implementation of the 2009 FAO Agreement on Port State Measures
3. Ratification and implementation of the 1993 FAO Compliance Agreement

Indicator calculation
The weight given to each of the variables in calculating the indicator value for each country are as follows:
• Variable 1 – 40%
• Variable 2 – 40%
• Variable 3 – 20%

Scoring
The absence of an NPOA and the lack of ratification of the binding Agreements will automatically result in a “zero” score for the respective variables, unless there is evidence that efforts to address the matter are being made (in which case some points are awarded). For each variable, the maximum score will be obtained if implementation is also present, as reported. As this indicator would be reported in the biannual CCRF survey, difference in score as compared to the preceding year of the previous survey response will reflect the progress made during the survey periods."

When do you expect the methodological work on this indicator to be completed?

2017
Goal 14: Conserve and sustainably use the oceans, seas and marine resources for sustainable development

Are data and metadata already being collected from the National Statistical System for one or more components of this indicator?

Yes

If yes, please describe:

FAO’s biannual survey on CCRF implementation already compiles responses by Members on the above mentioned instruments.

How do you plan to collect the data?

Send questionnaire(s) to country

With what frequency is data expected to be collected?

Biannually

Is there a process of data validation by countries in place or planned for this indicator?

Yes

If yes, please briefly describe:

After processing the CCRF questionnaire and computing the indicator, the score shall be communicated to each country for final validation before reporting to the IAEG.
Goal 14: Conserve and sustainably use the oceans, seas and marine resources for sustainable development

Target number: 14.a

Indicator Number and Name: 14.a.1 Proportion of total research budget allocated to research in the field of marine technology

Agency: IOC-UNESCO in cooperation with UNEP

Has work for the development of this indicator begun? Yes

Who are the entities, including national and international experts, directly involved and consulted in developing the methodology/and or data collection tools?

6) IOC-UNESCO: contact person Julian Barbire (J.barbiere@unesco.org) and Kirsten Isensee (k.isensee@unesco.org).

What is the involvement of or how do you plan to involve National Statistical Systems in the development of the methodology?

Testing phase of the agreed draft methodologies in pilot countries in early 2017 and data collection from countries from 2018 onwards.

Please briefly describe the process of developing the methodology for the indicator

The development and populating of the indicator 14.a.1 will be conducted as part of the preparation of the Global Ocean Science Report (GOSR) launched by IOC Member States in 2014. The GOSR was established to assist local and national governments, academic and research institutions, as well as international organizations and donors, in making informed decisions on future research investment. It will summarize information about the status of ocean research, investment in research infrastructure and human capacity. As national investment can vary among the different nations depending on the GDP, proxies as science output, technical and human capacities will be used to illustrate research investment. Preliminary information has been gathered in the form of national surveys and is being analysed to quantify research investment, research capacity and infrastructure, in particular human resources and the facilities/laboratories/field stations, as well as special equipment available in each nation, and each region respectively. This baseline information will be published through the IOC GOSR in 2016. More information available: http://www.unesco.org/new/en/natural-sciences/ioc-oceans/sections-and-programmes/ocean-sciences/global-ocean-science-report/

16) First draft of methodologies: background paper (existing data/methods to measure the indicator, potential methods to measure the indicator, recommendations) by September 2016
17) Review of the background paper in October 2016
18) Technical meeting with experts in late 2016
19) Finalization of draft methodologies by December 2016
20) Testing phase of agreed methodologies in pilot countries in early 2017
21) Finalization of methodologies by end 2017
22) Strategy for data collection in early 2018
23) Data collection from 2018 onwards.

Please indicate new international standards that will need to be proposed and approved by an intergovernmental process (such as UNSC) for this methodology.

Besides the direct information obtained for investment, proxies, which will indicate investment in a globally comparable way are and have to be developed and approved by intergovernmental processes.

When do you expect the methodological work on this indicator to be completed?

By end 2017.
Goal 14: Conserve and sustainably use the oceans, seas and marine resources for sustainable development

Are data and metadata already being collected from the National Statistical System for one or more components of this indicator?
No

If yes, please describe:

How do you plan to collect the data?
10) Send questionnaire to country
11) Obtain data directly from country database/website
12) Joint survey/compilation with national agency and international entity

If the indicator involves multiple components from different data sources, please describe how each individual component of the indicator will be collected here.
Existing data bases comprising information about technical infrastructure used for ocean science already exist, and have to be connected. These data together with information obtained via a IOC survey (to send out every 5 years) will be open access at a IODE portal.

With what frequency is data expected to be collected?
The data collection will be a continuous process, especially for information which are submitted to existing online portals e.g. JCOMMOBS. Data collection via questionnaires will be conducted every 5 years.

Is there a process of data validation by countries in place or planned for this indicator?
Yes

If yes, please briefly describe:
IOC member states have the possibilities to check data before they are published; further existing data will be compared to the newly collected one to detect mistakes.
Goal 14: Conserve and sustainably use the oceans, seas and marine resources for sustainable development

Target number: 14.b

Indicator Number and Name: 14.b.1 Progress by countries in adopting and implementing a legal/regulatory/policy/institutional framework which recognizes and protects access rights for small-scale fisheries

Agency: FAO

Has work for the development of this indicator begun? Yes. As explained further below, the indicator is based on questions of a new section on small-scale fisheries inserted in the latest version of the questionnaire on the implementation of the Code of Conduct for Responsible Fisheries which is sent to members and observers of the FAO Committee on Fisheries every two years.

Who are the entities, including national and international experts, directly involved and consulted in developing the methodology and/or data collection tools?

The methodology has been formulated through the FAO Task Force on Small-Scale Fisheries and takes into consideration the provisions of the Voluntary Guidelines for Securing Sustainable Small-Scale Fisheries in the Context of Food Security and Poverty Eradication (SSF Guidelines) endorsed by the FAO Committee on Fisheries in June 2014. These SSF Guidelines are the result of a participatory development process directly involving over 4,000 stakeholders from over 120 countries between 2011 and 2014, including national fisheries administrations, research and academia, civil society organizations and relevant regional organizations.

What is the involvement of or how do you plan to involve National Statistical Systems in the development of the methodology?

The indicator variables are based on three questions which are part of the set of questions on small-scale fisheries in the biannual FAO questionnaire survey on the implementation of the Code of Conduct for Responsible Fisheries (CCRF) and related instruments. The questionnaire is completed by the relevant national authorities, primarily the fisheries administration with the appropriate involvement of national statistical systems. The questionnaire is also sent to COFI observers, including relevant regional organizations and civil society organizations.

Please briefly describe the process of developing the methodology for the indicator

The indicator variables are based on three questions which are part of the set of questions on small-scale fisheries in the biannual FAO questionnaire survey on the implementation of the Code of Conduct for Responsible Fisheries (CCRF) and related instruments. The questions have been formulated through the FAO Task Force on Small-Scale Fisheries and have taken into consideration the provisions of the Voluntary Guidelines for Securing Sustainable Small-Scale Fisheries in the Context of Food Security and Poverty Eradication (SSF Guidelines) endorsed by the FAO Committee on Fisheries in June 2014.

When do you expect the methodological work on this indicator to be completed?

Preparatory work is completed and first results in terms of answers to the three questions on which the indicator is based become available during the 32nd session of the FAO Committee on Fisheries in July 2016. On that occasion COFI also agreed that the data and information submitted through the Code questionnaire could be used by Members for reporting on sustainable development goals (SDGs) indicators. The UN Conference Our Oceans, Our Future, held at the UN Headquarter, New York, on 5-9 June 2017 will provide an opportunity to finalize the methodology.
Goal 14: Conserve and sustainably use the oceans, seas and marine resources for sustainable development

Are data and metadata already being collected from the National Statistical System for one or more components of this indicator?

National Statistical Systems already collect fisheries-relevant data, with a focus on production, employment, and trade.

If yes, please describe:

As mentioned before, the indicator variables are based on three questions which are part of the set of questions on small-scale fisheries in the biannual FAO questionnaire survey on the implementation of the Code of Conduct for Responsible Fisheries (CCRF) and related instruments. Summary results of the questionnaire, including those three questions were provided to the 32nd Session of COFI in July 2016.

How do you plan to collect the data?

The data is collected through an electronic questionnaire which is already existing and has been used in 2015/16 to collect information on the implementation of the CCRF and related instruments from COFI members to inform the 32nd Session of COFI.

If the indicator involves multiple components from different data sources, please describe how each individual component of the indicator will be collected here.

The indicator variables are based on three questions which are part of the set of questions on small-scale fisheries in the biannual FAO questionnaire survey on the implementation of the Code of Conduct for Responsible Fisheries (CCRF) and related instruments submitted to FAO member countries.

With what frequency is data expected to be collected?

Through the FAO COFI the data is collected on a biannual basis. However, considering the agreement by COFI in July 2016 that the data and information submitted through the Code questionnaire could be used by Members for reporting on sustainable development goals (SDGs) indicators this frequency could be increased to an annual routine.

Is there a process of data validation by countries in place or planned for this indicator?

Yes.

If yes, please briefly describe:

The data is provided by countries themselves. After processing the CCRF questionnaire and computing the indicator, the score shall be communicated to each country for final validation before reporting to the IAEG.
Goal 14: Conserve and sustainably use the oceans, seas and marine resources for sustainable development

Target number: 14.c

Indicator Number and Name: 14.c.1 Number of countries making progress in ratifying, accepting and implementing through legal, policy and institutional frameworks, ocean-related instruments that implement international law, as reflected in the United Nation Convention on the Law of the Sea, for the conservation and sustainable use of the oceans and their resources

Agency: IMO

Has work for the development of this indicator begun? Yes

Who are the entities, including national and international experts, directly involved and consulted in developing the methodology and or data collection tools?

IMO has data related to its global instruments, which would contribute to the overall dataset of indicator 14.c.1

Please briefly describe the process of developing the methodology for the indicator

"IMO is the depositary and secretariat for more than 50 global instruments, about half of which are related to the marine environment. IMO compiles information about ratification/accession of each of the legal instruments. The dataset includes information for each treaty:

- Date of entry into force;
- Number of contracting States; and
- Percentage of the world tonnage to which treaty applies. In some cases other criteria for EIF apply, such as recycling capacity for the Hong Kong Ship Recycling Convention, and in those cases such information is collected as well.

Data is also available by country:

- Treaties that the country has ratified;
- Ratification type (accession/ratification/denouncement);
- Date of entry into force for the treaty;
- Date of entry into force in country;
- Date when instrument was deposited; and
- Notes (e.g. reservations).

It also includes the figures (percentage/tonnage) of the global tonnage that each treaty applies to. The dataset is continuously updated as soon as an instrument of accession is deposited with the Organization, and the tonnage figures on a monthly basis.

A full list of IMO treaties is attached at annex. The most crucial of these in the context of indicator 14(c) may be:

- International Convention for the Prevention of Pollution from Ships, 1973, as modified by the Protocol of 1978 relating thereto and by the Protocol of 1997 (MARPOL);
- International Convention for the Safety of Life at Sea (SOLAS), 1974, as amended;
- International Convention Relating to Intervention on the High Seas in Cases of Oil Pollution Casualties (INTERVENTION), 1969;
Goal 14: Conserve and sustainably use the oceans, seas and marine resources for sustainable development

- Convention on the Prevention of Marine Pollution by Dumping of Wastes and Other Matter (LC), 1972 (and the 1996 London Protocol);

- International Convention on Oil Pollution Preparedness, Response and Co-operation (OPRC), 1990;

- Protocol on Preparedness, Response and Co-operation to pollution Incidents by Hazardous and Noxious Substances, 2000 (OPRC-HNS Protocol);

- International Convention on the Control of Harmful Anti-fouling Systems on Ships (AFS), 2001;

- International Convention for the Control and Management of Ships' Ballast Water and Sediments, 2004; and

- The Hong Kong International Convention for the Safe and Environmentally Sound Recycling of Ships, 2009"

When do you expect the methodological work on this indicator to be completed?

The information described above already exist at IMO.

How do you plan to collect the data?

see above. Information already available.

With what frequency is data expected to be collected?

Continuously

If you have any additional comments that you believe would be helpful to IAEG-SDG members in analysing the work plan and methodological development of the indicator, please provide them here:

Please note that discussion on coordinated efforts are ongoing in UN-Oceans, and IMO is open for further discussion regarding this and other indicators.
Goal 14: Conserve and sustainably use the oceans, seas and marine resources for sustainable development

Target number: 14.c

Indicator Number and Name: 14.c.1 Number of countries making progress in ratifying, accepting and implementing through legal, policy and institutional frameworks, ocean-related instruments that implement international law, as reflected in the United Nation Convention on the Law of the Sea, for the conservation and sustainable use of the oceans and their resources

Agency: Secretariat of the Convention on Biological Diversity

Has work for the development of this indicator begun? Yes

Who are the entities, including national and international experts, directly involved and consulted in developing the methodology and/or data collection tools?

Discussions are ongoing among UN agencies through UN-Oceans.

What is the involvement of or how do you plan to involve National Statistical Systems in the development of the methodology?

At this stage, it is not certain to what degree national statistical systems would be involved in the development of the methodology. The information is available on the CBD website.

Please briefly describe the process of developing the methodology for the indicator

"Work is ongoing under UN-Oceans on this indicator. Methodology for this indicator should include the status of ratification and implementation of the Convention on Biological Diversity.

Parties to the Convention on Biological Diversity have committed to:
• Develop national targets using the Strategic Plan for Biodiversity 2011-2020 and its Aichi Biodiversity Targets, as a flexible framework. Aichi Target 2 reads “By 2020, at the latest, biodiversity values have been integrated into national and local development and poverty reduction strategies and planning processes and are being incorporated into national accounting, as appropriate, and reporting systems”;
• Review, and as appropriate update and revise, their national biodiversity strategies and action plans, including by integrating their national targets into their national biodiversity strategies and action plans; and
• Monitor and review the implementation of their national biodiversity strategies and action plans in accordance with the Strategic Plan and their national targets and to report to the Conference of the Parties through their fifth and sixth national reports and any other means to be decided by the Conference of the Parties

March 2016: online reporting tool formally opened
May 2016: guidance provided by SBSTTA-20 and SBI and reporting guidelines and analytical approach
December 2016: guidance finalized through decisions from COP-13
31 March 2019: proposed deadline for the submission of sixth national reports

This informed by an agreed monitoring and reporting process which is nearly universal (196 Parties) with the possibility for other Governments to participate in the reporting process."

When do you expect the methodological work on this indicator to be completed?
Goal 14: Conserve and sustainably use the oceans, seas and marine resources for sustainable development

The methodology for the collection of information on ratification of the Convention on Biological Diversity already exists (the CBD Secretariat maintains a list regarding the status of ratifications). Regarding national reporting on the implementation of the Convention, draft guidelines for the sixth national report to the Convention on Biological Diversity have been considered by the CBD Subsidiary Body on Scientific, Technical and Technological Advice (SBSTTA) and the Subsidiary Body on Implementation (SBI) and will be considered by the Conference of the Parties to the CBD in December 2016. An online reporting tool has been developed (https://chm.cbd.int/) and countries have been notified of the possibility to enter the formulation and rationale for their national targets including the target corresponding to Aichi Biodiversity Target 2 as well as to self-assess the level of progress made in achieving the national target (https://www.cbd.int/doc/notifications/2016/ntf-2016-038-online-reporting-en.pdf). March 2016: online reporting tool formally opened--May 2016: guidance provided by SBSTTA-20 and SBI and reporting guidelines and analytical approach--December 2016: guidance finalized through decisions from COP-13--31 March 2019: proposed deadline for the submission of sixth national reports

If the indicator involves multiple components from different data sources, please describe how each individual component of the indicator will be collected here.

"The information is available on-line on the CBD website.

An online reporting tool has been developed (https://chm.cbd.int/) and countries have been notified of the possibility to enter the formulation and rationale for their national targets including the target corresponding to Aichi Biodiversity Target 2 as well as to self-assess the level of progress made in achieving the national target (https://www.cbd.int/doc/notifications/2016/ntf-2016-038-online-reporting-en.pdf)."

With what frequency is data expected to be collected?

Continuously

Is there a process of data validation by countries in place or planned for this indicator?

Yes

If yes, please briefly describe:

Countries themselves submit a formal instrument of ratification and report on implementation through their national reporting process.
Goal 14: Conserve and sustainably use the oceans, seas and marine resources for sustainable development

Target number: 14.c

Indicator Number and Name: 14.c.1 Number of countries making progress in ratifying, accepting and implementing through legal, policy and institutional frameworks, ocean-related instruments that implement international law, as reflected in the United Nation Convention on the Law of the Sea, for the conservation and sustainable use of the oceans and their resources

Agency: DOALOS/OLA

Has work for the development of this indicator begun? Yes

Who are the entities, including national and international experts, directly involved and consulted in developing the methodology/and or data collection tools?

Members of UN-Oceans, an inter-agency coordination mechanism on ocean and coastal issues consisting of 23 UN-System organizations and the International Seabed Authority (see UN-Oceans website for list of members at www.unoceans.org), have initiated consultations in developing this indicator, including preparing metadata. Members of UN-Oceans work through face-to-face meetings supplemented by virtual meetings (teleconferences, videoconferences etc.). UN-Oceans has agreed that DOALOS will consolidate data to be provided by its members and serve as a focal point within UN-Oceans to send, on behalf of its members, as appropriate and necessary, data to the IAEG-SDGs.

What is the involvement of or how do you plan to involve National Statistical Systems in the development of the methodology?

At this stage, involvement of National Statistical Systems is not expected.

Please briefly describe the process of developing the methodology for the indicator

The methodology for this indicator will be developed through consultations among UN-Oceans members and, as appropriate and necessary, other international organizations relevant to ocean affairs and the law of the sea.

Please indicate new international standards that will need to be proposed and approved by an intergovernmental process (such as UNSC) for this methodology.

To be determined at a later stage.

When do you expect the methodological work on this indicator to be completed?

No specific indication is available at this moment. Every effort will be made to provide necessary information within a reasonable timeline. It is noted that this is a new indicator, and further extensive work is needed for developing the methodology and collecting necessary data.

Are data and metadata already being collected from the National Statistical System for one or more components of this indicator?

We are not yet aware of such data or metadata collection by national statistical systems at this stage.

How do you plan to collect the data?

Provision of data by Member States through their permanent missions.
Goal 14: Conserve and sustainably use the oceans, seas and marine resources for sustainable development

With what frequency is data expected to be collected?

Data is to be updated as new information becomes available, either through national authorities or through relevant intergovernmental organizations.

Is there a process of data validation by countries in place or planned for this indicator?

Data is validated as it is provided, in the case of DOALOS, by Member States through Permanent Missions in New York.

If you have any additional comments that you believe would be helpful to IAEG-SDG members in analysing the work plan and methodological development of the indicator, please provide them here:

This is a new indicator, and further extensive work is needed for developing the methodology and collecting necessary data.
Goal 14: Conserve and sustainably use the oceans, seas and marine resources for sustainable development

Target number: 14.c

Indicator Number and Name: 14.c.1 Number of countries making progress in ratifying, accepting and implementing through legal, policy and institutional frameworks, ocean-related instruments that implement international law, as reflected in the United Nation Convention on the Law of the Sea, for the conservation and sustainable use of the oceans and their resources

Agency: ILO (though the information could easily be collected by DOALOS or others).

Has work for the development of this indicator begun?  Yes

Who are the entities, including national and international experts, directly involved and consulted in developing the methodology and/or data collection tools?

Unfortunately, there has not been an opportunity to hold sufficient consultations to reach agreement with other UN system agencies on the measurement of this indicator. The ILO, however, remains open to further discussions on this matter.

What is the involvement of or how do you plan to involve National Statistical Systems in the development of the methodology?

At this stage, it is not certain to what degree national statistical systems would be involved in the development of the methodology. The information is available on ILO on-line databases. This matter requires further consideration.

Please briefly describe the process of developing the methodology for the indicator

"Article 94 (3)(b) of UNCLOS (Article 94, Duties of the flag State, provides, inter alia, that: “1. Every State shall effectively exercise its jurisdiction and control in … social matters over ships flying its flag” and “2. In particular every State shall: … (b) assume jurisdiction under its internal law over each ship flying its flag and its master, officers and crew in respect of … social matters concerning the ship.” And that “3. Every State shall take such measures for ships flying its flag as are necessary to ensure safety at sea with regard, inter alia, to: … (b) the manning of ships, labour conditions and the training of crews, taking into account the applicable international instruments” (emphasis added)). The following is with respect to the component of the indicator relevant to “social matters” on board ships (and fishing vessels), which are addressed in ILO shipping and fishing Conventions.

With respect to social matters and labour conditions, the most relevant applicable ILO international instruments are:

- the Maritime Labour Convention, 2006;
- the Work in Fishing Convention, 2007 (No. 188) and
- the Seafarers’ Identity Documents Convention (Revised), 2003 (No. 185).

Information on the ratifications of these standards is readily available on-line in the ILO ratification databases:

- For the Maritime Labour Convention, 2006:
- For the Work in Fishing Convention, 2007 (No. 188):
- For the Seafarers’ Identity Documents Convention (Revised), 2003 (No. 185):
Goal 14: Conserve and sustainably use the oceans, seas and marine resources for sustainable development

Note: The Maritime Labour Convention has a strong enforcement component. The International Labour Organization’s greatest strength in the context of the implementation of international labour Conventions is undoubtedly its supervisory system, carrying the necessary institutional guarantees and authority and an important tripartite component. With the Convention, there is a continuity of “compliance awareness” at every stage, from the national systems of protection up to the international system. It starts with the individual seafarers, who, under the Convention, must be properly informed of their rights and of the remedies available in case of alleged non-compliance with the requirements of the Convention and whose right to make complaints, both on board ship and ashore, are recognized in the Convention. It continues with the shipowners, who are required to develop and carry out plans for Introduction ensuring that the applicable national laws, regulations or other measures to implement the Convention are actually being complied with. The masters of the ships concerned are then responsible for carrying out the shipowners’ stated plans, and for keeping proper records to evidence implementation of the requirements of the Convention. As part of its updated responsibilities for the inspection of ships, the flag State reviews the shipowners’ plans and verify and certify that they are actually in place and being implemented. They carry out periodic quality assessments of the effectiveness of their national systems of compliance, and their reports to the ILO under article 22 of the Constitution provide information on their inspection and certification systems, including on their methods of quality assessment. This general inspection system in the flag State (which is founded on ILO Convention No. 178) is complemented by procedures to be followed in countries that are also or even primarily the source of the world’s supply of seafarers; these countries similarly report under article 22 of the ILO Constitution. The system, moreover, is reinforced by voluntary measures for inspections in foreign ports (port State control). An international information base has been developed, benefiting from the reports exchanged between port States or transmitted by them to the ILO as well as the documentation relating to complaints made by seafarers and other interested parties, under the Convention’s procedures.

Note: The Work in Fishing Convention, 2007 (No. 188) is also subject to the ILO’s supervisory system and is also subject to port State control.

Note: the Seafarers’ Identity Documents Convention (Revised), 2003 (No. 185) does not include port State provisions but is subject to the ILO’s supervisory system (as are all ratified ILO Conventions).”

Please indicate new international standards that will need to be proposed and approved by an intergovernmental process (such as UNSC) for this methodology.

This will not require new international standards.

When do you expect the methodological work on this indicator to be completed?

The methodology for the collection of information on ratification of ILO Conventions already exists (the ILO maintains and publishes a list of ratifications) and can be considered completed.

Are data and metadata already being collected from the National Statistical System for one or more components of this indicator?

No. National Statistical Systems may collect information on ratifications of ILO standards, but we cannot answer with certainty.

When do you expect work to begin on developing a methodology and with which partners will your organisation work?
Goal 14: Conserve and sustainably use the oceans, seas and marine resources for sustainable development

It may not be necessary, as the information is contained on ILO ratification databases when States submit their instruments of ratification to the International Labour Office.

How do you plan to collect the data?

See information as noted earlier. The information is already on-line in ILO databases, though it could also be collected from individual States.

With what frequency is data expected to be collected?

Continuously

Is there a process of data validation by countries in place or planned for this indicator?

No

If yes, please briefly describe:

Though "no" has been checked, the process of submitting a formal instrument of ratification may itself be considered a validation. The ILO system of supervising the application of standards may also be relevant to this question.

If you have any additional comments that you believe would be helpful to IAEG-SDG members in analysing the work plan and methodological development of the indicator, please provide them here:

As noted above, the ILO has not yet reached agreement with other UN system agencies on the measurement of indicator 14c. It is open to further discussion. However, the proposal put forth for the collection of information on ratification of ILO shipping and fishing Conventions is already in place. The ILO is open for discussion on other ideas on how to measure with respect to this indicator.
Goal 15: Protect, restore and promote sustainable use of terrestrial ecosystems, sustainable manage forests, combat desertification, and halt and reverse land degradation and halt biodiversity loss

Goal 15

Target number: 15.2

Indicator Number and Name: 15.2.1 Progress towards sustainable forest management

Agency: FAO

Has work for the development of this indicator begun? Yes

Who are the entities, including national and international experts, directly involved and consulted in developing the methodology/and or data collection tools?

"An informal group of interested parties was formed, including:
- CBD Secretariat
- UNFF Secretariat
- UNCCD Secretariat
- UNFCCC Secretariat
- UNECE
- International Tropical Timber Organization (ITTO)
- Montréal Process
- Forest Europe
- Tehran Process for Low Forest Cover Countries
- Amazon Cooperation Treaty Organization

Consultative process:
Several meetings have been held with partners."

What is the involvement of or how do you plan to involve National Statistical Systems in the development of the methodology?

No involvement of national statistical systems so far. Once there is a general agreement on the methodology among the partners, National Statistical Systems will be involved.

Please briefly describe the process of developing the methodology for the indicator

Meetings have been held with partners. A consultant has been drafting the proposal, and between meetings draft versions have been circulated for comments. Next meeting is scheduled for end of July 2016.

When do you expect the methodological work on this indicator to be completed?

By end of 2016

Are data and metadata already being collected from the National Statistical System for one or more components of this indicator?

Yes
Goal 15: Protect, restore and promote sustainable use of terrestrial ecosystems, sustainable manage forests, combat desertification, and halt and reverse land degradation and halt biodiversity loss

If yes, please describe:

"Data are already being collected for all the proposed sub-indicators as part of the global forest resources assessment:
1. Annual average percent change in forest area (most recent available 5-year period).
2. Annual average percent change in stock of carbon in above-ground biomass (most recent available 5-year period)
3. Share of forest area whose primary designated function is biodiversity conservation (most recent period)
4. Share of forest area under a forest management plan, of which forest area certified under an independent forest management certification scheme (most recent period).

There may still be small refinements in the formulation of the sub-indicators as part of the process."

How do you plan to collect the data?

Send questionnaire(s) to country

If the indicator involves multiple components from different data sources, please describe how each individual component of the indicator will be collected here.

"All data for this indicator are already collected through FAO's global forest resources assessment. Data on forest certification are obtained from databases of the major international forest certification schemes."

With what frequency is data expected to be collected?

Currently every 5 years, but the possibility of annual reporting is being evaluated.

Is there a process of data validation by countries in place or planned for this indicator?

Yes

If yes, please briefly describe:

All reported country data (including those prepared by FAO) are sent to the respective Head of Forestry for validation before finalization.
Goal 15: Protect, restore and promote sustainable use of terrestrial ecosystems, sustainable manage forests, combat desertification, and halt and reverse land degradation and halt biodiversity loss

Target number: 15.3

Indicator Number and Name: 15.3.1 Proportion of land that is degraded over total land area.

Agency: UNCCD

Has work for the development of this indicator begun? Yes

Who are the entities, including national and international experts, directly involved and consulted in developing the methodology and or data collection tools?

The UNCCD has formed an Inter-Agency Advisory Group on indicator 15.3.1 composed of UNCCD, FAO, CBD, UNFCCC, UNEP and UNSD to develop the methodology and data options for this indicator. The focal points of this Advisory Group will also consult with their technical partners and data providers as part of this work.

What is the involvement of or how do you plan to involve National Statistical Systems in the development of the methodology?

Once a complete methodology package has been finalized, the Advisory Group will explore modalities of working with national statistical systems to validate and refine the methodology.

Please briefly describe the process of developing the methodology for the indicator

"In February 2016, the UNCCD and its key partners convened a meeting with over 60 experts from organizations, institutions, governments and the private sector to discuss the methodologies and data sets needed to monitor progress towards SDG target 15.3, in particular the indicator 15.3.1. At this expert meeting, there was a general consensus on the use of three sub-indicators: i) land cover, ii) land productivity and iii) carbon stocks, above and below ground; and that these sub-indicators need to be further contextualized with other national data and information. Subsequent to the expert meeting, the UNCCD submitted a revised metadata document contained in the SDG 15 compilation of 04 March 2016 and established the Inter-Agency Advisory Group on SDG indicator 15.3.1.

From June to December 2016, the UNCCD, in consultation with the Advisory Group, will assemble a team of international experts to produce Good Practice Guidance for deriving indicator 15.3.1, including a harmonized approach to data options at the national, regional and global levels. A comprehensive metadata document will then be presented to the IAEG-SDGs for its review in early 2017."

Please indicate new international standards that will need to be proposed and approved by an intergovernmental process (such as UNSC) for this methodology.

"An international standard for the sub-indicator on land cover exists (ISO 19144-2:2012); the Land Cover Meta Language (LCML) provides a common reference structure for the comparison and integration of data for any generic land cover classification system. LCML is also used for defining land-cover/ecosystem functional units by the System of Environmental-Economic Accounting (SEEA).

The other two sub-indicators on land productivity and carbon stocks will require new international standards to be approved by the appropriate body."
Goal 15: Protect, restore and promote sustainable use of terrestrial ecosystems, sustainable manage forests, combat desertification, and halt and reverse land degradation and halt biodiversity loss

When do you expect the methodological work on this indicator to be completed?

Early 2017.

Are data and metadata already being collected from the National Statistical System for one or more components of this indicator?

Yes

If yes, please describe:

"For some countries, data on land cover are being collected by National Statistical Systems; for most countries, land cover data is spread among different statistical fields (agriculture, environment, forestry, etc.) and related relevant agencies or ministries.

For the sub-indicators on land productivity and carbon stocks, data collection remains with specialized institutions at the national and regional levels."

How do you plan to collect the data?

Send questionnaire(s) to country, Joint survey/compilation with national agency and international entity, Satellite images, remote sensing, UNCCD national reports

If the indicator involves multiple components from different data sources, please describe how each individual component of the indicator will be collected here.

The sub-indicators will require multiple data sources. National official data sources will be used to the greatest extent possible, complemented by default data derived from Earth observation and geospatial information. The three sub-indicators are part of the UNCCD’s mandatory reporting which will begin in 2018.

With what frequency is data expected to be collected?

Every four years.

Is there a process of data validation by countries in place or planned for this indicator?

Yes

If yes, please briefly describe:

In the absence of or to complement national official data sources, countries would validate default data, a process which has already been established as part of the UNCCD national reporting.

If you have any additional comments that you believe would be helpful to IAEG-SDG members in analysing the work plan and methodological development of the indicator, please provide them here:
Goal 15: Protect, restore and promote sustainable use of terrestrial ecosystems, sustainable manage forests, combat desertification, and halt and reverse land degradation and halt biodiversity loss

The sub-indicator on land cover will also be used to assist in monitoring a number of other SDG targets and the Advisory Group is working with others, such as the UNSD on SEEA, to ensure a consistent methodology and classification system for the SDG indicator framework.
Goal 15: Protect, restore and promote sustainable use of terrestrial ecosystems, sustainable manage forests, combat desertification, and halt and reverse land degradation and halt biodiversity loss

Target number: 15.3

Indicator Number and Name: 15.3.1 - sub-component on soil organic carbon

Agency: FAO

Has work for the development of this indicator begun? Yes

Who are the entities, including national and international experts, directly involved and consulted in developing the methodology and or data collection tools?

International Soil Information Institutions of the Global Soil Partnership (GSP); currently 60 countries, to be extended to 135 countries where there are national focal points nominated by governments.

What is the involvement of or how do you plan to involve National Statistical Systems in the development of the methodology?

It will be recommended through a methodological specification and good practice recommendation to exchange and clarify the approaches, metadata and results with the national statistical offices. Linkages with these institutions already were formally established through FAO Statistics. Nevertheless, the GSP secretariat will advise to the GSP national soil focal points to address and coordinate action with these institutions.

Please briefly describe the process of developing the methodology for the indicator

The GSP, advised by the Intergovernmental Technical Panel on Soils (ITPS), is currently establishing a global soil information system including an indicator-based monitoring system denominated SoilSTAT. This includes soil carbon (concentrations and stocks, status and trends). Currently, it is expected that the system being designed be implemented through the International Network of Soil Information Institutions (INSII). A guidance manual containing the specifications for the indicator will be agreed upon with all partners. According to GSP Pillars on Information and Data and on Harmonisation, all relevant specifications for the development of the global soil data infrastructure will be defined and explained in detail, in coordination with other FAO products and services, and in attention to the use of similar definitions and concepts under the SDG process.

Please indicate new international standards that will need to be proposed and approved by an intergovernmental process (such as UNSC) for this methodology.

"IPCC (2006) contains the most relevant definitions, especially with regard to reference values usable for Tier 2 and 3 GHG reporting. Beyond this, the GSP will agree with all partners on a consistent methodical indicator framework for soils. With regard to the technical soil infrastructure, data transfer and provision of national reporting data will be standards-based (ISO and OGC for the exchange of digital spatial data sets). An extended ISO 28258 will be the core model for exchanging soil data."

When do you expect the methodological work on this indicator to be completed?
Goal 15: Protect, restore and promote sustainable use of terrestrial ecosystems, sustainable manage forests, combat desertification, and halt and reverse land degradation and halt biodiversity loss

2017

Are data and metadata already being collected from the National Statistical System for one or more components of this indicator?

Yes

If yes, please describe:

Data are already being collected in various countries. The process is domain-specific and hardly communicated with national statistics. FAO intends to mediate this process largely by developing and implementing SoilSTAT as part of the FAOSTATs family but also by other means. FAOSTAT is embedded in a standardized exchange of national agro-environmental data through national designated statistical offices.

How do you plan to collect the data?

Obtain data directly from country database/website, Joint survey/compilation with national agency and international entity, Satellite images, remote sensing

If the indicator involves multiple components from different data sources, please describe how each individual component of the indicator will be collected here.

The global soil information system will have multiple components. A guidance manual with indicator specifications is expected to be agreed among all countries (currently 135). The system design follows the architecture of modern web-based systems (e.g. GEOSS). However, data repositories will be established for centralized components.

Is there a process of data validation by countries in place or planned for this indicator?

Yes

If yes, please briefly describe:

Because the system is designed to be country-driven, uncertainty assessments and validation at national level will be recommended. Cross-validation between different approaches is foreseen as well.

If you have any additional comments that you believe would be helpful to IAEG-SDG members in analysing the work plan and methodological development of the indicator, please provide them here:

"Among others, with regard to the sub-indicator soil organic carbon, it has been formally agreed between FAO, UNCCD and other partners that the GSP, hosted by FAO, and with regard to the UN-statistical system approaches, will develop operational solutions to the cover soil organic carbon component under the SDG reporting scheme. This will be disseminated at the technical and scientific level in March 2017 during a joint conference organized between the IPCC and GSP-ITPS. Quality assurance of the methodological approach adopted, and products developed will be provided by the GSP scientific Body, the ITPS."
Goal 15: Protect, restore and promote sustainable use of terrestrial ecosystems, sustainable manage forests, combat desertification, and halt and reverse land degradation and halt biodiversity loss

**Target number:** 15.6

**Indicator Number and Name:** 15.6.1: Number of countries that have adopted legislative, administrative and policy frameworks to ensure fair and equitable sharing of benefits

**Agency:** CBD Secretariat

**Has work for the development of this indicator begun?**

Yes

**Who are the entities, including national and international experts, directly involved and consulted in developing the methodology and/or data collection tools?**

Article 14, paragraph 2 of the Nagoya Protocol provides that Parties shall make available to the Access and Benefit-sharing Clearing House (ABS Clearing-House) legislative, administrative and policy measures on access and benefit-sharing. Article 24 encourages non-Parties to make available information to the ABS Clearing-House. In light of this Protocol obligation, in decision NP-1/2, COP-MOP urged Parties to make available to the ABS Clearing-House all mandatory information in accordance with the Nagoya Protocol as soon as possible and invited non-Parties to do the same (paragraph 9 and 10). The CBD Secretariat implements and administers the ABS Clearing-House (https://absch.cbd.int/) which includes information on countries that have legislative, administrative or policy measures on access and benefit-sharing in place in accordance with Article 14 of the Protocol. The CBD Secretariat provides technical support and directly contacts countries to assist them in publishing this information in the ABS Clearing-House.

In addition, information towards achieving Target 15.6 will be provided on progress made by countries in relation to promotion of access and benefit-sharing through the International Treaty on Plant Genetic Resources for Food and Agriculture (International Treaty). Parties to the Treaty must translate the obligations within the Treaty, including those related to promoting access and benefit-sharing, into national actions. The ratification of the Treaty triggers the examination by the country of their current legislative and regulatory frameworks to take steps to improve such frameworks. The Governing Body of the Treaty has adopted compliance procedures under which each Contracting Party of the Treaty should report regularly on (legislative, administrative or policy) measures it has taken to implement its obligations under the Treaty. The first such report was due in October of 2016. Article 12.4 of the International Treaty provides for facilitated access to genetic material covered by the Treaty’s Multilateral System of Access and Benefit-sharing (Multilateral System), to be made through a Standard Material Transfer Agreement (SMTA) that also sets out the obligations for benefit-sharing for those receiving genetic material. Supplementary data will be provided to summarize the number of SMTAs reported to the Governing Body through the online system, called Easy-SMTA, since the establishment of the Treaty’s Multilateral System of Access and Benefit-sharing. Easy-SMTA is the information system that generates the statistics and has been established since November 2010 by the Secretariat of the International Treaty to allow providers of material in the Multilateral System to report online on their transfers at accession level and to comply with their reporting obligations.

**What is the involvement of or how do you plan to involve National Statistical Systems in the development of the methodology?**

The indicator is dependent on countries making information available to the ABS Clearing-House on ABS legislative, administrative or policy measures.
Goal 15: Protect, restore and promote sustainable use of terrestrial ecosystems, sustainable manage forests, combat desertification, and halt and reverse land degradation and halt biodiversity loss

For supplementary information of SMTAs concluded under the International Treaty, SMTAs transfers are reported to the Governing Body directly by the providers of the genetic material through the online system Easy-SMTA (https://mls.planttreaty.org).

The involvement of National Statistical Systems would be up to the national relevant authority.

Please briefly describe the process of developing the methodology for the indicator

The indicator formulation calls for assessing the extent to which countries have adopted measures to ensure fair and equitable sharing of benefits. The ABS Clearing-House provides the main source of information on which countries have adopted legislative, administrative or policy measures to ensure fair and equitable sharing of benefits under the CBD and Nagoya Protocol. Data can be disaggregated by country, regional group and/or membership to a specific regional organization and/or by their status as Parties or non-Parties to the Protocol.

For supplementary information of SMTAs concluded under the International Treaty, the number of SMTAs are reported to the Governing Body of the International Treaty. The data are automatically generated and aggregated as SMTAs are reported online. The Secretariat of the International Treaty is requested by the Governing Body to compile the data and provide updated statistics on the implementation of the Multilateral System at each Governing Body session, every two years.

Please indicate new international standards that will need to be proposed and approved by an intergovernmental process (such as UNSC) for this methodology.

N/A

When do you expect the methodological work on this indicator to be completed?

2016

Are data and metadata already being collected from the National Statistical System for one or more components of this indicator?

No

If yes, please describe:

The extent to which information on the existence of legislative, administrative and policy frameworks or measures is held by the National Statistical System may vary from country to country.

How do you plan to collect the data?

Data are collected through official submissions to the ABS Clearing-House (https://absch.cbd.int/).

For supplementary information of SMTAs concluded under the International Treaty, collection of data is through official submission to the Data Store or using the online system Easy-SMTA. (https://mls.planttreaty.org/itt/).
Goal 15: Protect, restore and promote sustainable use of terrestrial ecosystems, sustainable manage forests, combat desertification, and halt and reverse land degradation and halt biodiversity loss

If the indicator involves multiple components from different data sources, please describe how each individual component of the indicator will be collected here.

N/A

With what frequency is data expected to be collected?

Continuous

Is there a process of data validation by countries in place or planned for this indicator?

Yes

If yes, please briefly describe:
Countries are to make information on ABS legislative, administrative or policy measures available to the ABS Clearing-House. All information taken into account for assessing progress in this indicator has been validated by countries.

If you have any additional comments that you believe would be helpful to IAEG-SDG members in analysing the work plan and methodological development of the indicator, please provide them here:

Indicator 15.6.1 has been classified as a Tier III indicator. Given the availability of a methodology and the availability and use of an established reporting system (the ABS Clearing-House), with supplementary information provided through the International Treaty, including through its online system Easy-SMTA, the IAEG-SDG might wish to review this assessment.
Goal 15: Protect, restore and promote sustainable use of terrestrial ecosystems, sustainable manage forests, combat desertification, and halt and reverse land degradation and halt biodiversity loss

Target number: 15.8

Indicator Number and Name: 15.8.1 Proportion of countries adopting relevant national legislation and adequately resourcing the prevention or control of invasive alien species

Agency: IUCN

Has work for the development of this indicator begun? Yes

Who are the entities, including national and international experts, directly involved and consulted in developing the methodology/and or data collection tools?

- International Union for Conservation of Nature (IUCN)
- IUCN Invasive Species Specialist Group
- Biodiversity Indicators Partnership
- Convention on Biological Diversity
- University of Auckland, New Zealand
- Monash University, Australia
- Institute for Environmental Protection and Research (ISPRA), Italy
- IUCN World Commission on Environmental Law.

What is the involvement of or how do you plan to involve National Statistical Systems in the development of the methodology?

National Statistical Systems, via relevant government departments, will be involved in the development of the methodology through their engagement in the mechanisms listed above. Thus, they will serve as sources of data and information.

Please briefly describe the process of developing the methodology for the indicator

This is an existing indicator (McGeoch et al. 2010) that measures the adoption of national legislation relevant to the prevention or control of invasive alien species. It is in the process of being expanded to incorporate an element reflecting “adequate resourcing”. This indicator was first calculated in 2010, dating back to the 1950s, but there has not yet been a global update since then. Plans are to update this baseline, enhance it and make it available for global, regional and national use.

The indicator measures the management response to alien invasive species globally, by tracking invasive alien species legislation for control and prevention at national and international levels. The more countries with invasive alien species and biosecurity-related legislation, the greater the global commitment to controlling the threat to biodiversity from invasive alien species. The larger the number of invasive alien species-relevant international policies, and the greater the level of national commitment to these, the greater the global commitment to controlling invasive alien species. The more international agreements a country is party to, the more strongly committed the country is to controlling invasive alien species.

Ten multinational environment-related agreements were used to quantify trends in the adoption of invasive alien species-related policy. National legislation related to the prevention, management and
Goal 15: Protect, restore and promote sustainable use of terrestrial ecosystems, sustainable manage forests, combat desertification, and halt and reverse land degradation and halt biodiversity loss

control of invasive alien species was recorded including year of enactment, type of legislation (prevention, management etc.), and the data analysed to calculate the indicator.

The global trend in policy response has been positive for the few last decades and, since the publication of GBO3, the adoption of policies against invasive alien species has significantly increased. As reported in 2010, 55% of the 191 countries (in 2010) that are Party to the Convention on Biological Diversity (CBD) have overarching national legislation to prevent, control and/or limit the spread and impact of invasive alien species, and most CBD Parties were signatory to at least one of ten other multilateral agreements that cover invasive alien species in some form. Among these countries, 8% are signatory to all 10 international agreements (McGeoch et al. 2010).

For example, the Council of Europe has been developing and adopting codes of conduct addressing some key pathways (e.g. horticulture, botanic gardens, zoos, hunting, or fishing) of invasive alien species. Moreover, once the European regulation on invasive alien species is fully adopted, it will have major implications for neighbouring countries, but also at a world scale, as the European institution is a major partner for global trade.

The projection of the current trend of adoption of national policies on invasive alien species projects a non-significant increase by 2020, with a slowing of the rate of increase in the proportion of countries adopting such legislation. The adoption of national and international policies on invasive alien species is a first step to combatting the spread of invasive alien species.

This indicator is utilised for assessing progress towards Aichi Biodiversity Target 9 of the Strategic Plan for Biodiversity 2011-2020: “by 2020, invasive alien species and pathways are identified and prioritized, priority species are controlled or eradicated, and measures are in place to manage pathways to prevent their introduction and establishment” (CBD 2014, Tittensor et al. 2014), and was used as an indicator towards the CBD’s 2010 Target (Butchart et al. 2010). The indicator is maintained by the IUCN Species Survival Commission’s Invasive Species Specialist Group and collaborators.

The indicator is also relevant to a number of other Goals and Targets including SDG Targets 2.4, 3.d, 6.6, 14.2, and 15.5.

Caveats include the fact that the adoption of legislation does not necessarily indicate the existence of regulations or policy to implement the legislation or how successful such implementation has been on the ground. There still remains a need for further indicator refinement to make this link clearer. In addition, legislation does not necessarily capture all efforts against invasive alien species that are happening at the national level.

The methodology being used for the further development of this indicator is based on the approach used in the development of the indicator “Trends in policy responses, legislation and management plans to control and prevent spread of invasive alien species” developed within the Biodiversity Indicators Partnership framework in 2010. For computing ‘adequate resourcing’ by the countries, the team in consultation with international experts is identifying proxies that can be used to generate the information required to measure adequate resourcing by countries to manage the threat of invasive alien species.

These metadata are based on http://www.bipindicators.net/iaslegislationadoption, supplemented by the references listed below.
Goal 15: Protect, restore and promote sustainable use of terrestrial ecosystems, sustainable manage forests, combat desertification, and halt and reverse land degradation and halt biodiversity loss

Please indicate new international standards that will need to be proposed and approved by an intergovernmental process (such as UNSC) for this methodology.

This will not require new international standards.

However, the indicator is based on existing, precisely defined concepts and terms. Specifically, an alien species is a species introduced by humans – either intentionally or accidentally – outside of its natural past or present distribution, however not all alien species have negative impacts, and it is estimated that between 5% and 20% of all alien species become problematic. It is these species that are termed ‘invasive alien species’. Thus, an invasive alien species (IAS) is a species that is established outside of its natural past or present distribution, whose introduction and/or spread threaten biological diversity.

When do you expect the methodological work on this indicator to be completed?

End 2016

Are data and metadata already being collected from the National Statistical System for one or more components of this indicator?

Yes

If yes, please describe:

National Statistical System portal is being used to link to national resources for country statistics and legislation. Specifically, data for this indicator are produced by identifying any national legislation relevant to controlling invasive alien species for each country (currently implemented for 196 Parties to the Convention on Biological Diversity). Legislation is considered relevant to the prevention of alien species introductions or to control of invasive alien species if it applied to multiple taxonomic groups and was not exclusively intended to protect agriculture. If two separate sets of legislation within a country cover plants and animals, the date of the more recent legislation is used. Invasive alien species-related legislation is implemented through national Ministries of the Environment and a variety of other ministries and agencies. Thus national accession into relevant multinational environment-related agreements serves as the underlying data for this indicator.
Goal 15: Protect, restore and promote sustainable use of terrestrial ecosystems, sustainable manage forests, combat desertification, and halt and reverse land degradation and halt biodiversity loss

The indicator is derived from national accession into relevant multinational environment-related agreements, and so there are no differences between global and national figures.

How do you plan to collect the data?

Data and information is being collated through comprehensive Literature searches, accessing national websites, databases such as ECOLEX, Country profiles on the CBD Website, InforMEA website; consultation with country experts. All data and information is subjected to a verification process once it is structured.

If the indicator involves multiple components from different data sources, please describe how each individual component of the indicator will be collected here.

The Indicator team has developed a template for the collection of the various components of data, that will facilitate analysis. All information recorded is referenced and source information stored in folders for future reference

With what frequency is data expected to be collected?

Every 2 years.

Is there a process of data validation by countries in place or planned for this indicator?

Yes

If yes, please briefly describe:

The Indicator team has access to a network of country editors (invasive alien species experts) who are supporting the development of verified inventories of introduced and invasive species. This network of country editors is being used to verify country data and information.
Goal 15: Protect, restore and promote sustainable use of terrestrial ecosystems, sustainable manage forests, combat desertification, and halt and reverse land degradation and halt biodiversity loss

Target number: 15.9

Indicator Number and Name: 15.9.1 Progress towards national targets established in accordance with Aichi Biodiversity Target 2 of the Strategic Plan for Biodiversity 2011-2020

The indicator is based on the commitment by Parties to the Convention on Biological Diversity to:

- Develop national targets using the Strategic Plan for Biodiversity 2011-2020 and its Aichi Targets, as a flexible framework. Aichi Target 2 reads “By 2020, at the latest, biodiversity values have been integrated into national and local development and poverty reduction strategies and planning processes and are being incorporated into national accounting, as appropriate, and reporting systems”;
- Review, and as appropriate update and revise, their national biodiversity strategies and action plans, including by integrating their national targets into their national biodiversity strategies and action plans; and
- Monitor and review the implementation of their national biodiversity strategies and action plans in accordance with the Strategic Plan and their national targets and to report to the Conference of the Parties through their fifth and sixth national reports and any other means to be decided by the Conference of the Parties.

Accordingly the indicator is informed by an agreed monitoring and reporting process which is nearly universal (196 Parties) with the possibility for other Governments to participate in the reporting process.

2. Current work taking place on the indicator.

Meanwhile, an online reporting tool has been developed ([https://chm.cbd.int/](https://chm.cbd.int/)) and countries have been notified of the possibility to enter the formulation and rationale for their national targets including the target corresponding to Aichi Biodiversity Target 2 as well as to self-assess the level of progress made in achieving the national target ([https://www.cbd.int/doc/notifications/2016/ntf-2016-038-online-reporting-en.pdf](https://www.cbd.int/doc/notifications/2016/ntf-2016-038-online-reporting-en.pdf)).

3. Plan to develop the methodology and international standard

a. Highlight the process to develop methodology/standards

National targets are formulated in accordance with national priorities and circumstances and may therefore not be comparable. However, an assessment of progress towards the national target based on a standardized scale and guidance on its application on the one hand as well as the requirement for countries to relate their national target and the progress made to the global target and the national contribution that would be required to achieve the global target provide a good degree of comparability and enable the aggregation of national information.

b. Other agencies/organisations involved in this development
Goal 15: Protect, restore and promote sustainable use of terrestrial ecosystems, sustainable manage forests, combat desertification, and halt and reverse land degradation and halt biodiversity loss

UNEP-WCMC has been commissioned to examine options for analysing national progress reported on the Aichi biodiversity Targets or corresponding national targets. A feasibility study was presented at the meeting of the Ad hoc Technical Expert Group on Indicators for the Strategic Plan for Biodiversity 2011-2020 (Geneva, Switzerland, 14-17 September 2015) (https://www.cbd.int/doc/meetings/ind/id-ahteg-2015-01/information/id-ahteg-2015-01-inf-06-en.doc).

c. Describe the process of testing the methodology and when this will begin

The approach has been tested initially by extracting information from the 64 national reports available in time for analysis in GBO-4 (see page 131 of https://www.cbd.int/gbo/gbo4/publication/gbo4-en.pdf) and this analysis has been updated for SBI-1 drawing on information from 166 fifth national reports (see pages 5 and 20 of https://www.cbd.int/doc/meetings/sbi/sbi-01/official/sbi-01-02-add2-en.doc) and further updated for COP-13 on the basis of 180 fifth national reports and 99 revised or updated NBSAPs (see page 5 of https://www.cbd.int/doc/meetings/cop/cop-13/official/cop-13-08-add2-en.doc). The methodology is described on pages 3-4 of https://www.cbd.int/doc/meetings/sbi/sbi-01/official/sbi-01-02-add2-en.doc.

d. Timeframe

March 2016: online reporting tool formally opened
May 2016: guidance provided by SBSTTA-20 and SBI and reporting guidelines and analytical approach
December 2016: guidance finalized through decisions from COP-13
31 December 2018: proposed deadline for the submission of sixth national reports

4. How will the work be reported back to the IAEG-SDGs and, possibly, the Statistical Commission? (If applicable at this time)

Information entered and published in the online reporting tool is publicly available and visible in a mapping tool (https://www.cbd.int/reports/map/, https://www.cbd.int/reports/map/?filter=AICHI-TARGET-02). It can therefore be reported at any time.

5. What is the plan for the global reporting mechanism for the indicator?

a. How will the data be collected?

Through submissions of sixth national reports and information published in the online reporting tool.

b. Which regions will be covered?

All regions, all Parties to the CBD, other Governments can also publish information.

c. When will data collection begin?

Data collection has begun.
Goal 16: Promote peaceful and inclusive societies for sustainable development, provide access to justice for all and build effective, accountable and inclusive institutions at all levels

Goal 16

Target number: 16.1

Indicator Number and Name: 16.1.2 Conflict-related deaths per 100,000 population, by sex, age and cause

Agency: OHCHR

Has work for the development of this indicator begun? Yes

Who are the entities, including national and international experts, directly involved and consulted in developing the methodology and or data collection tools?

OHCHR (headquarters and field presences in conflict situation contexts), WHO, UNODC, UNMAS and DESA Population Division (the last two organisations indicated that they will participate in the Praia Working Group created to work on this indicator), UN Peace Building Support Office and UN Departments of Peacekeeping Operations and Field Support.

At its 47th session, the UNSC welcomed the support of the Praia Group for the relevant development of indicators for targets of Goal 16 of the Sustainable Development Goals (E/2016/24-E/CN.3/2016/34)

United Nations

Other potentially involved organizations/entities include: Casualty Recorders Network, Human Rights Data Analysis Group, International Committee of the Red Cross (ICRC), Uppsala Conflict Data Program and Centre for the Study of Civil War (UCDP Battle-Related Deaths Dataset; One-sided Violence Dataset and Non-state Actor Dataset), International Institute for Strategic Studies (IISS), ACLED, Global Peace Index, Aid Worker Security Database. Other organization may be identified in the process.

In terms of consultative process, OHCHR started consulting organizations and experts on a bilateral basis. Given the complementary in their data collection work and mandates in relation to indicator 16.1.2 (and 16.1.1 on homicide rates), OHCHR consulted WHO and UNODC on the present submission. The process envisaged for developing the indicator and its methodology will be discussed during a first meeting of the Praia Working Group (see above members list) in Paris, 4-6 July 2016.
Goal 16: Promote peaceful and inclusive societies for sustainable development, provide access to justice for all and build effective, accountable and inclusive institutions at all levels

What is the involvement of or how do you plan to involve National Statistical Systems in the development of the methodology?

National statistical systems will be involved in the development of the methodology in the context of the work of the Praia Group and in other relevant consultations that will be organized for the same purpose. Involvement of national statistical systems will also concern data collection, as multiple data sources will be necessary for the compilation of the indicator.

Please briefly describe the process of developing the methodology for the indicator

As mentioned above, a first meeting of the Praia working group created to work on this indicator will be held in Paris on 4-6 July 2016. The meeting will provide an opportunity to discuss with partners and experts, including representatives from national statistical systems, about respective work and data collection, and identify definitional, methodological and practical issues to be considered in developing the methodology. The meeting will help specify further the process to be followed for developing the methodology.

Among the issues that the work will have to address, we can mention for instance:
• defining and identifying relevant conflict situations and conflict related deaths (direct and indirect);
• disaggregating data by characteristics of victims and perpetrators (e.g. civilians, combatants, women, children, humanitarian workers,), and by causes of death;
• developing verification criteria and minimum standards for data quality; and
• reconciling multiple data sources (e.g. administrative records of justice and health authorities, casualty recording by national and international civil society organisations and human rights mechanisms, population surveys by statistical offices) as well as lack of data in many contexts.

Using recommendations from the first meeting of the Praia Group, it is proposed to undertake a thorough survey of initiatives and available standards, definitions, data collection and dissemination methods, that have been used to compile relevant components of the indicator. This mapping will seek to cover data collection undertaken by a wide range of actors, including governmental agencies, civil society organisations, UN and other international agencies and entities (e.g. International Commissions of Inquiry).

The results of the survey will be discussed at a second expert consultation, involving members of the Praia Group and other relevant national and international stakeholders. A report outlining the main conclusions and recommendations of the meeting for the compilation of the indicator will be produced and shared for further consultations and inputs.

Using these outcomes, guidance will be developed to strengthen data collection, dissemination and exchange practices and further collaboration between national and international stakeholders. This guidance should enable UN agencies, including OHCHR, WHO and UNODC, in consultation with relevant partners, to compile and release consistent estimates of indicator 16.1.2. This guidance will also be reflected in the handbook to be developed and submitted by the Praia Group to the UN Statistical Commission.

Capacity building activities, exchanges on good practices and development of a network of data providers and related data validation processes, both at national and international levels, are also planned as part of the development of this indicator.
Goal 16: Promote peaceful and inclusive societies for sustainable development, provide access to justice for all and build effective, accountable and inclusive institutions at all levels

Please indicate new international standards that will need to be proposed and approved by an intergovernmental process (such as UNSC) for this methodology.

The methodology to be developed will rely and build primarily on existing international legal and statistical standards, including international human rights law and the International Classification of Crimes for Statistical Purposes (ICCS). If new international standards will have to be developed (none are currently anticipated), they will be proposed to the UNSC through the Praia Group, and if applicable, through the mechanism overseeing the ICCS.

When do you expect the methodological work on this indicator to be completed?

Towards the end of 2017

Are data and metadata already being collected from the National Statistical System for one or more components of this indicator?

Yes

If yes, please describe:

There are data (and to some extent metadata) already being collected at national and international levels. It relates to administrative records, casualty recording and population surveys implemented through country-level processes, involving justice and health authorities, statistical offices, human rights mechanisms, civil society organizations, UN and other international organizations. Mapping available data and metadata will be part of the survey exercise mentioned previously.

How do you plan to collect the data?

- [x] Send questionnaire(s) to country
- [x] Obtain data directly from country database/website
- [x] Joint survey/compilation with national agency and international entity
- [x] Other: big data

If the indicator involves multiple components from different data sources, please describe how each individual component of the indicator will be collected here.

As described earlier, different data sources will enter in the compilation of the indicator. Different questionnaires to collect necessary data are already sent to countries by UN agencies. These questionnaires may have to be reviewed in light of the needs identified for this indicator. With a concern not to add new burdens on countries, we will seek to obtain data directly from available database/website. In conflict-setting however, the lack of operational or accessible recording capacity commands to use other data collection mechanisms, even if only temporary or as a complement to existing recording systems. The work on casualty recording carried out in the framework of UN operations (e.g. Peacekeeping operations, Commission of Inquiry), in collaboration with governments and civil society organizations, should therefore constitute an important data source. In addition, data made available by civil society organizations carrying out media and other global monitoring (e.g. big data) will also have to be assessed for their usefulness in compiling components of the indicator.
Goal 16: Promote peaceful and inclusive societies for sustainable development, provide access to justice for all and build effective, accountable and inclusive institutions at all levels

With what frequency is data expected to be collected?

Annually

Is there a process of data validation by countries in place or planned for this indicator?

Yes

If yes, please briefly describe:

It is planned to develop data validation processes both at national and international levels. In identified conflict situations, capacity building activities and collaboration among relevant stakeholders at country level will be promoted. Data validation with international organizations and experts will be also sought for and particularly important in contexts of insufficiently solid data collection capacities at country level.
Goal 16: Promote peaceful and inclusive societies for sustainable development, provide access to justice for all and build effective, accountable and inclusive institutions at all levels

Target number: 16.2

Indicator Numbers and Names: 16.2.1 Proportion of children aged 1-17 years who experienced any physical punishment and/or psychological aggression by caregivers in the past month

Agency: UNICEF

Has work for the development of this indicator begun? Yes

Who are the entities, including national and international experts, directly involved and consulted in developing the methodology and/or data collection tools?

UNICEF has drafted a detailed programme of methodological work to develop tools for the collection of reliable, comprehensive and comparable data on various forms of violence against children (VAC), including violent discipline and sexual violence, within existing data collection efforts. This work will soon be underway, in collaboration with a broader global inter-agency advisory and coordination group on VAC measurement that will be established by UNICEF and will include the involvement of National Statistical Offices (NSOs) in addition to other UN agencies and INGOs. The inter-agency group will be advised by an expert advisory group composed primarily of academics with technical expertise in the measurement of VAC and former experience with tool development and technical experts in validity and reliability testing and cognitive testing for tool/instrument validation.

What is the involvement of or how do you plan to involve National Statistical Systems in the development of the methodology?

NSOs will be involved in the tool development as part of the inter-agency group mentioned above. In addition, NSOs will play a key role in supporting the testing and validation of the new tools and will ultimately be the ones collecting the actual data by including the new tools in existing data collection efforts at national level.

Please briefly describe the process of developing the methodology for the indicator

Despite numerous research activities on violence against children, there is currently no established best practice for measuring and producing statistics on this sensitive issue that has been agreed upon internationally. As a result, existing research and data on violence against children tend to be inconsistent, unreliable and of varying scope and quality, especially in low- and middle-income countries. In some cases, this has stemmed from a country’s lack of capacity and resources for data collection and, in other cases, from insufficient investment in improving measurement. Additionally, different approaches have been developed to gather data, including the use of diverse definitions, methodologies, questionnaires and indicators that has made comparisons between countries problematic. Therefore, rigorous evidence and robust data on the extent, nature and impact of violence against children is limited and this has long compromised the ability of countries and the international community to accurately document the widespread nature of violence, to support government planning and budgeting for child protection services, and to inform the development of effective laws, policies and prevention efforts worldwide.

UNICEF, in collaboration with a broad group of international experts and NSOs, intends to work on the development of a set of survey modules on violence against children that can be included in existing data collection efforts, in support of the monitoring of VAC related SDG indicators, including 16.2.1. The aim is to measure the prevalence of various forms of violence against children,
Goal 16: Promote peaceful and inclusive societies for sustainable development, provide access to justice for all and build effective, accountable and inclusive institutions at all levels

including violent discipline by caregivers, and to collect information on some key contextual factors including types of violence experienced by children, perpetrators, age at victimization, help-seeking etc. While the intention is to develop content that will be relevant and applicable in all contexts (including humanitarian and conflict settings), questions will be designed to allow for country customization. Questions will be included that will allow for the calculation of indicators to be used for reporting on target 16.2 of the SDGs to ensure that countries can use the modules to fulfil their reporting obligations. The development of the modules will take into account ethical considerations for collecting data on violence against children and interviewing children about violence. With respect to violent discipline and indicator 16.2.1, the work will focus on the development of measures that can capture violent disciplinary practices across a broader age group and across different socio-economic and cultural contexts, building on existing tools and methods that have are available and have been used so far to collect data on disciplinary practices, in several low- and middle-income countries (see below).

UNICEF will also work on the development of a manual to support the implementation of the modules. The manual will include all the necessary background documentation that will accompany the set of modules, including indicator definitions, tabulation plans, templates for reporting, instructions for interviewers and training material. The manual is primarily intended to be used by National Statistical Offices and other national counterparts with responsibility for implementing data collection. Capacity building workshops for NSOs will also take place to strengthen national capacity for data collection and analysis on Violence against Children.

Please indicate new international standards that will need to be proposed and approved by an intergovernmental process (such as UNSC) for this methodology.

The overarching purpose of the inter-agency group that will be established by UNICEF is to oversee the development, testing and validation of the new tools on VAC for use by all countries (including high-income countries), within the context of existing data collection efforts, to collect internationally comparable, nationally representative and statistically sound data for SDG monitoring of target 16.2 and to ensure that countries have access to reliable and valid measurement tools to collect the necessary data on violence against children in order to measure progress towards achieving the target and to fulfil their reporting obligations.

When do you expect the methodological work on this indicator to be completed?

Within one year (for the methodological work on 16.2.1).

Are data and metadata already being collected from the National Statistical System for one or more components of this indicator?

Yes.

If yes, please describe:
With regards to violent discipline specifically (covered by indicator 16.2.1), there is an established, standardized, tested and validated methodology and tool (the Conflict Tactics Scale or CTS) that is widely accepted and has been implemented in a large number of countries to collect data on this indicator for the population of children aged 1 to 14. Household surveys such as UNICEF-supported MICS and USAID-supported DHS have been collecting data on this indicator in low- and middle-income countries since around 2005 utilizing a modified version of the CTS. In some countries, such
Goal 16: Promote peaceful and inclusive societies for sustainable development, provide access to justice for all and build effective, accountable and inclusive institutions at all levels

data are also collected through other national household surveys. The CTS has also been used in several studies conducted in high-income countries. AS of today, data on indicator 16.2.1 (for the population of children aged 1 to 14) have been regularly collect data by NSO in around 70 mostly low- and middle-income countries. Such data are regularly compiled by UNICEF and have been published in many documents, including in the SG report on the SDGs that was released in July 2016.

When do you expect work to begin on developing a methodology and with which partners will your organisation work?

UNICEF has already begun planning the process of methodological work. This work will be undertaken in consultation with a broad group of technical experts and academics and partners from other UN agencies and INGOs as well as with involvement from NSOs.

How do you plan to collect the data?

The new survey modules on VAC will be available for inclusion in existing data collection efforts, including national household surveys as well as in the context of international household survey programmes such as the UNICEF-supported MICS or the USAID-supported DHS. In addition, countries will have the option to collect data using the entire set of modules or to collect data using only a selection of the modules that covers the forms of violence of most interest and relevance.

With what frequency is data expected to be collected?

Every two to four years, depending on the needs and interests of the country.

Is there a process of data validation by countries in place or planned for this indicator?

It is expected that all data collected using the new survey modules on VAC will be owned and validated by the national implementing agencies (mainly NSOs) involved in the collection of the data. UNICEF will only publish those data that have been vetted by its country offices, in collaboration with national counterparts.

If you have any additional comments that you believe would be helpful to IAEG-SDG members in analysing the work plan and methodological development of the indicator, please provide them here:

No additional comments.
Goal 16: Promote peaceful and inclusive societies for sustainable development, provide access to justice for all and build effective, accountable and inclusive institutions at all levels

Target Number: 16.4

Indicator Number and Name: 16.4.1 Total value of inward and outward illicit financial flows (in current USD)

Agency: UNODC

Has work for the development of this indicator begun?

Yes. A number of technical consultations have been held with experts from national statistical offices, international agencies and individual experts. As a result, a preliminary network of relevant agencies and parties has been identified, jointly with possible venues to develop the methodology.

Who are the entities, including national and international experts, directly involved and consulted in developing the methodology/and or data collection tools?

At national level, a plurality of agencies need to be involved, including National Statistical Offices, Central Banks and Financial Information Units; at international level, relevant agencies may include UNCTAD, UNSD, European Commission, Eurostat, OECD; international experts from the academia and from relevant NGOs will also be involved as a number of relevant research initiatives have been developed outside official statistics.

What is the involvement of or how do you plan to involve National Statistical Systems in the development of the methodology?

A Task Force of interested and relevant parties will be established and representatives of National Statistical Systems will form its main constituency. It will be important to involve national experiences that have implemented methodologies in associated areas, such as estimates of illegal economy and/or tax evasion. A mix of expertise is needed to develop the methodology for estimating IFFs, including from crime statistics, national accounts, financial and balance of payment statistics. Interested countries will be identified through consultation with the network of UN-CTS National Focal Points. This network is formed of national representatives - appointed by Member States – from either National Statistical Offices or other government agencies directly involved in the production and dissemination of statistical data on crime and criminal justice.

Please briefly describe the process of developing the methodology for the indicator

Four steps are envisaged:

1. Establish Task Force to develop methodology to estimate Illicit Financial Flows (TF-IFFs) to review and discuss existing methodologies, develop an operational definition of IFFs for statistical purposes, explore methodological approaches on IFF and identify ways to test them.

2. Conduct pilot studies in interested countries to test suitable methodologies to measure selected components of IFFs.

3. Review results of the testing and identify next steps to refine the methodology, also in view of broadening the scope to additional IFFs components

4. Conduct second round of pilot studies and finalise the methodology to estimate IFFs, together with guidelines for implementation respectively for national, regional and global estimates.
Goal 16: Promote peaceful and inclusive societies for sustainable development, provide access to justice for all and build effective, accountable and inclusive institutions at all levels

Please indicate new international standards that will need to be proposed and approved by an intergovernmental process (such as UNSC) for this methodology.

Once finalised, the methodology will be submitted to National Statistical Systems through the network of UN-CTS National Focal Points for their review.

When do you expect the methodological work on this indicator to be completed?

Subject to the availability of financial resources, the methodological work on the indicator is expected to be completed by mid-2019.

Are data and metadata already being collected from the National Statistical System for one or more components of this indicator?

No.

If yes, please describe:

How do you plan to collect the data?

Data on IFFs and related variables will be collected at national level through existing channels of data collection.

If the indicator involves multiple components from different data sources, please describe how each individual component of the indicator will be collected here.

Computing IFFs requires estimates on a number of interlinked variables, as for example illegal economic activities. Data collection will gather data on all relevant components, with the exclusion of those already available from other national sources (e.g. National Accounts).

With what frequency is data expected to be collected?

The UN-CTS is implemented annually, though periodicity of national data is expected to be highly variable.

Is there a process of data validation by countries in place or planned for this indicator?

Yes

If yes, please briefly describe:

UNODC has an established policy to ask Member States to validate the compiled data through their identified national institutions. Comments received from Member States if any are dealt with and resolved through one to one communication with the responsible entities in the Member States before data are published.
Goal 16: Promote peaceful and inclusive societies for sustainable development, provide access to justice for all and build effective, accountable and inclusive institutions at all levels

Target number: 16.6

Indicator Number and Name: 16.6.2 Proportion of the population satisfied with their last experience of public services

Agency: UNDP

Has work for the development of this indicator begun? Yes

Who are the entities, including national and international experts, directly involved and consulted in developing the methodology and or data collection tools?

"The main source of data for indicator 16.6.2 is, or will be, a perception survey run by the national statistics office. As elaborated below, such surveys are conducted in an increasing number of countries, differentiated for various services; and may include a number of measures of service quality, which may include physical facilities in which the service was accessed, whether the service met expectations, timeliness, quality and comprehensiveness of information provided, professionalism and courtesy of public officials, responsiveness to queries or complaints, relevant outcomes, affordability/value for money and specific issues of accessibility for targeted population groups, e.g. physical accessibility or availability of information in minority languages.

The methodological development for this indicator will be advanced considerably during the second annual meeting (in Paris from July 4/6, 2016) of the UNSC’s Praia City Group on governance statistics, which came into being specifically to meet the need for an organised official-statistical response to the measurement of SDG 16. (This will be elaborated at (c) below.) However, there is already a significant foundation and extensive experience on which to build, in two main respects: described at (a) below, the harmonized survey module on governance, peace and security (GPS) already being widely applied by national statistical offices (NSOs) – primarily in Africa under the auspices of the Strategy for the Harmonisation of Statistics in Africa (ShaSA), but as far afield as Peru, annually for the last decade, ad Vietnam; and described at (b), the extensive empirical work and published scientific analysis in the survey-based measurement of GPS conducted for years by Afrobarometer the other regional Barometers, Gallup’s repeated World Value Surveys, and others.

(a) The substantial SHaSA GPS experience since 2013 confirms the technical and methodological feasibility and substantive validity of the proposed survey-based indicators for indicator 16.6.2, in comparative and differentiated respects. Among twenty African countries that have committed to the GPS programme, 9 countries have already undertaken the surveys at least once, after institutionalizing the NSO role in the production of GPS statistics at country level. This has enabled the leveraging of their official mandate and legitimacy, as well as their expertise, scale of operation, training, documentation, and sustainability. Moreover, the SHAsA program has recently workshoped and then documented the country experiences in running the survey, including the challenges that have been encountered with the survey design and in the execution of the survey itself. Since detailed questions on the GPS module ask specifically about rates of access to, and trust in, services/institutions, the GPS-SHaSA experience can thoroughly inform the development of the methodology for 16.6.2. Questions cover respondents perceptions and experiences of public service (in general), courts of justice, police, public hospitals and clinics, public schools, tax/customs authorities, social security system, state media, Parliament, army, President, Prime Minister (where applicable), Mayor (where applicable). The analyses permit disaggregation by gender, region, income and other relevant demographic variables.
Goal 16: Promote peaceful and inclusive societies for sustainable development, provide access to justice for all and build effective, accountable and inclusive institutions at all levels

The GPS-SHaSA methodology also provides for triangulation of survey-based data with statistical information from official administrative sources. To this end, some of the implementing NSOs have convened inter-departmental committees to formulate schedules and mechanisms the annual information gathering.

(b) In addition to existing NSO experiences, questionnaire design on this theme, as well as disaggregation and other analyses, have been extensively tested and implemented in highly regarded academic and private-sector perception surveys, which include the Afrobarometer and the other Barometers and Gallup’s broad-coverage World Values Survey. Regional Barometers (e.g. 19 countries in Africa in 2014 amongst 36 in total since the Afrobarometer process started, 10 Arab states in the Arabbarometer, 18 Latin American states in the Latinobarometer, 13 Asian states with three surveys and a further five with at least one survey each) ask about experience of accessing essential government services, including public schools, public clinics and hospitals, registration offices (birth certificate, driver’s licence, passport, voter’s card, permits, etc), water, sanitation and electricity. Questions also ask about ease of access, including the need for bribes, gifts or favours. The World Values Survey asks respondents in 60 countries (for the 6th Wave, 2010-2014) about confidence in institutions including the armed forces, the police, the courts, government and parliament. There are also questions on the extent to which government should take responsibility to ensure that everybody is provided for. Moreover, Gallup’s World Poll conducts representative surveys face to face in over 140 countries covering the emerging and developed world, including questions on confidence in the judicial system, in the local police, in the military and in government. Edelman’s Trust Barometer breaks down questions of trust amongst a range of institutions.

(c) The Praia City Group on Governance Statistics has established a working group taken from its membership to develop the methodology and data collection tools for 16.6.2. This working group includes the Bureau of Justice Statistics (US Department of Justice); DFID, French Institute of Research for Development, Hungarian Central Statistics Office, INEGI Mexico, ECOWAS, OECD, Palestinian Central Bureau of Statistics, UNDP, UN Women, PRIO and Statistics South Africa. Institut National de la Statistique du Cameroun, Institut National de la Statistique du Niger, OECD, Palestinian Central Bureau of Statistics, the Philippine Statistics Authority, Statistiques Tunisie, Statistics South Africa and UN Woman. The tasks of this working group set out in its UNSC-approved roadmap are to produce an initial metadata sheet for the indicator that will be provided to the Praia Secretariat; develop the methodology for the indicator; provide a final metadata sheet for the indicator, informed on the methodology proposed; revise the proposed metadata sheet and methodology informed by the recommendations derived by the consultations.

UNDP is actively considering the bolstering of its internal capacities to support data collection on the global level.”

What is the involvement of or how do you plan to involve National Statistical Systems in the development of the methodology?

See 6.2.1(b) above. National statistical offices are involved in the development of the methodology through their membership of the Praia City Group on Governance Statistics, in many instances based on their prior experience in this particular area.

Please briefly describe the process of developing the methodology for the indicator

The process for development of the methodology will be guided by the Praia City Group on Governance Statistics, drawing on the extensive NSO, academic and private-sector experiences.
Goal 16: Promote peaceful and inclusive societies for sustainable development, provide access to justice for all and build effective, accountable and inclusive institutions at all levels

Please indicate new international standards that will need to be proposed and approved by an intergovernmental process (such as UNSC) for this methodology.

The applicable standards are being developed by the Praia Group and will put forward to the IAEG-SDG. Approval procedures by UNSC are not foreseen yet.

When do you expect the methodological work on this indicator to be completed?

End of 2017

Are data and metadata already being collected from the National Statistical System for one or more components of this indicator?

Yes

If yes, please describe:

Among twenty African countries that have committed to the GPS programme, 9 countries have already undertaken the surveys at least once, after institutionalizing the NSO role in the production of GPS statistics at country level.

How do you plan to collect the data?

Send questionnaire(s) to country

With what frequency is data expected to be collected?

Annually

Is there a process of data validation by countries in place or planned for this indicator?

Yes

If yes, please briefly describe:

See 6.2.1 (a) and (b) for mention of the processes in certain countries and regions, upon which the Praia City Group will draw.
Goal 16: Promote peaceful and inclusive societies for sustainable development, provide access to justice for all and build effective, accountable and inclusive institutions at all levels

Target number: 16.7

Indicator Number and Name: Indicator 16.7.2: Proportion of population who believe decision-making is inclusive and responsive, by sex, age, disability and population group

Agency: UNDP

Has work for the development of this indicator begun? Yes

Who are the entities, including national and international experts, directly involved and consulted in developing the methodology and/or data collection tools?

"The methodological development for this indicator will be advanced considerably during the annual meeting of the Praia Group on governance statistics which will be held in Paris from July 4/6, 2016. The Group will be able to draw upon a significant body of experience, in two main respects.

Firstly, the harmonized survey module on governance, peace and security (GPS), including perceptions and experiences of the responsiveness of decision-making at various levels, has been administered by nine African national statistical offices (NSOs) under the Strategy for the Harmonisation of Statistics in Africa (ShaSA), as well as NSOs as far afield as Peru, annually for a decade, and Vietnam. Published results include detailed disaggregation. This GPS experience confirms the technical validity and methodological feasibility of the proposed survey-based indicators for indicator 16.7.2. The process has institutionalized the production of GPS statistics at country level by NSOs - leveraging their expertise, official mandate and legitimacy. The SHaSA programme also provides for interdepartmental collaboration under NSO leadership to gather administrative data for triangulation, e.g. on institutional representativeness. Moreover, the SHaSA program has documented the country experiences in running the survey including the challenges that have been encountered in the survey methodology and in the execution of the survey itself which will inform the development of the methodology for 16.7.2.

Secondly, private-sector surveys like the sixty-country Gallup World Values Survey have directly applicable items, sustained over several years; and relevant items and trends are also to be found in the regional Barometers. Published scientific analyses including disaggregation are available to inform methodological discussion.

The Praia City Group on Governance Statistics has established a working group taken from its membership to develop the methodology and data collection tools for 16.7.2. This working group includes ECOWAS, OECD, Palestinian Central Bureau of Statistics, UNDP, UN Women, PRIO and Statistics South Africa. The tasks of this working group, established in its UNSC-approved roadmap, are to produce an initial metadata sheet for the indicator that will be provided to the Praia Secretariat; develop the methodology for the indicator; provide a final metadata sheet for the indicator, informed on the methodology proposed; revise the proposed metadata sheet and methodology informed by the recommendations derived by the consultations.

UNDP is actively considering the bolstering of its internal capacities to support data collection on the global level."

What is the involvement of or how do you plan to involve National Statistical Systems in the development of the methodology?
Goal 16: Promote peaceful and inclusive societies for sustainable development, provide access to justice for all and build effective, accountable and inclusive institutions at all levels

National statistical offices are involved in the development of the methodology through their membership of the Praia City Group on Governance Statistics.

Please briefly describe the process of developing the methodology for the indicator

See above.

Please indicate new international standards that will need to be proposed and approved by an intergovernmental process (such as UNSC) for this methodology.

Standards are being developed by the Praia Group and put forward to the IAEG-SDG.

When do you expect the methodological work on this indicator to be completed?

End of 2017 at the latest.

Are data and metadata already being collected from the National Statistical System for one or more components of this indicator?

Yes

If yes, please describe:

See 6.2.1. - Praia City Group on Governance Statistics

How do you plan to collect the data?

Send questionnaire(s) to country, Joint survey/compilation with national agency and international entity

With what frequency is data expected to be collected?

Annually

Is there a process of data validation by countries in place or planned for this indicator?

No

If you have any additional comments that you believe would be helpful to IAEG-SDG members in analysing the work plan and methodological development of the indicator, please provide them here:

The extensive NSO experience-base in survey-based GPS measurement, and the Praia City Group considerations for this measure, will be of use to developing survey-based complementary indicators
Goal 16: Promote peaceful and inclusive societies for sustainable development, provide access to justice for all and build effective, accountable and inclusive institutions at all levels

Target number: 16.10

Indicator Number and Name: 16.10.1 - Number of verified cases of killing, kidnapping, enforced disappearance, arbitrary detention and torture of journalists, associated media personnel, trade unionists and human rights advocates in the previous 12 months

Agency: OHCHR

Has work for the development of this indicator begun? Yes

Who are the entities, including national and international experts, directly involved and consulted in developing the methodology and or data collection tools?

Members of the Praia working group on indicator 16.10.1: ECOWAS - Gbogboto Bundu Musa; Institut National de la Statistique du Niger - Amadou Garba Halimatou; Palestinian Central Bureau of Statistics – Khalid Abu Khalid; Statistics South Africa - Isabelle Schmidt; INEGI (Mexico) (tbc)

Other potentially involved organizations/entities include regional and national human rights mechanisms and additional National Statistical Offices and civil society organizations

In terms of consultative process, OHCHR started consulting organizations and experts on a bilateral basis. OHCHR is partnering with UNESCO and ILO, which provided inputs for the present submission. The process envisaged for developing the indicator and its methodology will be discussed during a first meeting of the Praia Working Group (see above members list) in Paris, 4-6 July 2016."

What is the involvement of or how do you plan to involve National Statistical Systems in the development of the methodology?

"National statistical systems will be involved in the development of the methodology in the context of the work of the Praia Group and in other relevant consultations that will be organized on the same topic. Different national stakeholders (e.g. national statistical offices, human rights institutions) will be identified and take part in data collection efforts depending on country context and institutional framework. Among the issues to be addressed in the development of the methodology for this indicator are the following:

1. Lack of common/consistent definitions, methodologies and practices
2. Data disaggregation by characteristics of victims/perpetrators and type of abuses
3. Protection of human rights (e.g. data confidentiality)
4. Reconciling data from various sources (avoiding duplication of records)
5. How to expand data coverage and strengthen capacity at country level to enable OHCHR, UNESCO, ILO and other relevant international mechanisms to produce consistent global figures"
**Goal 16: Promote peaceful and inclusive societies for sustainable development, provide access to justice for all and build effective, accountable and inclusive institutions at all levels**

**Please briefly describe the process of developing the methodology for the indicator**

"As mentioned above, a first meeting of the Praia working group created to work on this indicator will be held in Paris on 4-6 July 2016. The meeting will provide an opportunity to discuss with partners and experts, including representatives from national statistical systems, about respective work and data collection, and identify definitional, methodological and practical issues to be considered in developing the methodology. The meeting will help specify further the process to be followed for developing the methodology.

Based on the results of the Praia working group meeting, conduct an in-depth technical review of the existing definitions, methodologies, dissemination practices and data sources currently used to measure violence against journalists, human rights defenders and trade unionists, their compatibility with the proposed SDG indicator and suitability for global reporting. Starting from the data currently collected by OHCHR, UNESCO and ILO, this review will seek to cover data collection carried by multiple actors, including national statistical offices and other governmental agencies, national human rights institutions and civil society organisations.

The results of this mapping exercise will be discussed at subsequent expert consultations, involving the members of the Working Group on the SDG indicator 16.10.1 created under the Praia Group on Governance Statistics, OHCHR, UNESCO and ILO and other relevant stakeholders. These consultations will help develop guidance on definitions, methods and practices relevant to the compilation of this indicator. It will also provide common standards, tools and recommendations to reconcile data coming from multiple sources; strengthen data coverage; and ensure implementation of statistical and human rights standards in these data collection efforts.

In line with the mandate of the Praia Group, this process will seek to be inclusive and to further collaboration between stakeholders at national and international levels. Guidance and collaboration developed should enable OHCHR, UNESCO and ILO, to compile and release consistent figures on indicator 16.10.1. The tools developed will be reflected in the handbook to be prepared and submitted by the Praia Group to the UN Statistical Commission.

Capacity building activities, exchanges on good practices and development of a network(s) of experts and stakeholders, both at national and international levels, are also planned as part of the development of the indicator and its validation process."

**Please indicate new international standards that will need to be proposed and approved by an intergovernmental process (such as UNSC) for this methodology.**

The methodology to be developed will rely and build primarily on existing international legal and statistical standards, including international human rights law and the International Classification of Crimes for Statistical Purposes (ICCS). If new international standards will have to be developed (none are currently anticipated), they will be proposed to the UNSC through the Praia Group, and if applicable, through the mechanism overseeing the ICCS.

**When do you expect the methodological work on this indicator to be completed?**

Towards the end of 2017

**Are data and metadata already being collected from the National Statistical System for one or more components of this indicator?**
Goal 16: Promote peaceful and inclusive societies for sustainable development, provide access to justice for all and build effective, accountable and inclusive institutions at all levels

Yes

If yes, please describe:

Available data is currently being collected from a variety of national sources, including national human rights institutions, Ministry of Justice/Labour, and civil society organizations. Mapping available data and metadata will be part of the survey exercise mentioned in 6.2.3.

How do you plan to collect the data?

Send questionnaire(s) to country, Obtain data directly from country database/website, Joint survey/compilation with national agency and international entity, Build on existing databases and mechanisms supported by OHCHR, UNESCO and ILO as part of their mandates

If the indicator involves multiple components from different data sources, please describe how each individual component of the indicator will be collected here.

The methodology for collecting data from different data sources is still being developed.

With what frequency is data expected to be collected?

Annually

Is there a process of data validation by countries in place or planned for this indicator?

Yes

If yes, please briefly describe:

A data validation process will be developed building on existing validation practices followed by OHCHR, UNESCO and ILO and the international mechanisms they service in conformity with their respective mandates.

If you have any additional comments that you believe would be helpful to IAEG-SDG members in analysing the work plan and methodological development of the indicator, please provide them here:

A statistical definition of Trade Unionist is already being used in agreement with ICLS to compile data on trade union density (ILO).
Goal 16: Promote peaceful and inclusive societies for sustainable development, provide access to justice for all and build effective, accountable and inclusive institutions at all levels

Target number: 16.b

Indicator Number and Name: 16.b.1 and 10.3.1 - Proportion of population reporting having personally felt discriminated against or harassed in the previous 12 months on the basis of a ground of discrimination prohibited under international human rights law

Agency: OHCHR

Has work for the development of this indicator begun? Yes

Who are the entities, including national and international experts, directly involved and consulted in developing the methodology and/or data collection tools?

"UN organizations/entities: Office of the High Commissioner for Human Rights, United Nations Office on Drugs and Crimes, UN Women

Members of the Praia working group on indicator 16.b.1: - Independent Researcher (New York University/Congo Research) – Francesca Bomboko; Departamento Administrativo Nacional de Estadistica (Colombia) - Diana Carolina Nova Laverde; French Institute of Research for Development – François Roubaud; INEGI México – Oscar Jaime Bello, Adrián Franco Barrios, García Velazquez María del Pilar; Institut National de la Statistique du Niger – Amadou Garba Halimatou; Statistiques Tunisie - Lotfi Hrizi, Nadia Touihri; OECD - Marco Mira D’Ercole; Palestinian Central Bureau of Statistics – Khalid Abu Khalid; Bureau of Justice Statistics (U.S. Department of Justice) – Allen Beck; Statistics South Africa - Isabelle Schmidt; UN Women – Sara Duerto Valero

Other potentially involved organizations/entities include: European Union Fundamental Rights Agency; Focal points of national statistical offices of the United Nations Survey of Crime Trends and Operations of the Criminal Justice System; other experts that will be identified later

In terms of consultative process, OHCHR started consulting organizations and experts on a bilateral basis. OHCHR participated in the UNODC meeting of Global Focal Points of the Surveys on Crime Trends and Operations of the Criminal Justice System (UN-CTS) in May 2016. One of the recommendations was adding questions on experience/perception of discrimination to the existing section on victimization survey to take advantage of the existing annual data collection through identified and active focal points in each country. Among other things, the discussion highlighted comparability issues and needs for more targeted sampling frame to capture the different grounds of discrimination. The process envisaged for developing the indicator and its methodology will be further discussed during a first meeting of the Praia Working Group (see above members list) in Paris, 4-6 July 2016."

What is the involvement of or how do you plan to involve National Statistical Systems in the development of the methodology?

"National statistical systems will be involved in the development of the methodology in the context of the work and consultations organized within the Praia Group framework and in the context of other relevant consultations on country level work and experience in implementing victimization surveys and other data collections relevant to the compilation of the indicator. Among the issues to be addressed in the context of this work, we can mention for instance:
Goal 16: Promote peaceful and inclusive societies for sustainable development, provide access to justice for all and build effective, accountable and inclusive institutions at all levels

- measurement of experience versus perception of discrimination and related validity and comparability issues;
- Use of specialized discrimination surveys versus discrimination modules within a general or other purpose survey;
- Surveying/accessing population groups who may be marginalized and/or at risk of discrimination;
- Guaranteeing implementation of human rights and statistical standards in data collection work.

Based on a mapping of national, regional and international surveys on measurement of discrimination (as stand-alone applications or as a part of victimization or general purpose surveys), representatives of national statistical systems will be consulted on above mentioned as well as additional related issues, such as: grounds and areas of discrimination covered; cognitive testing; screening and sampling techniques; inclusion of ‘hard to reach’ / potentially ‘left behind’ group; training of interviewers; and capacity building at country level."

Please briefly describe the process of developing the methodology for the indicator

"As mentioned above, a first meeting of the Praia working group created to work on this indicator will be held in Paris on 4-6 July 2016. The meeting will provide an opportunity to discuss with partners and experts, including representatives from national statistical systems, about respective work and data collection, and identify definitional, methodological and practical issues to be considered. The meeting will help specify further the process to be followed for developing the methodology. Based on the results of the Praia meeting, it is envisaged to:

- conduct an in-depth technical review of the methodologies currently applied by national statistical systems to measure experience/perception of discrimination, their compatibility with the proposed SDG indicator and suitability for global reporting;
- convene follow-up expert consultations, in coordination with Group Praia to discuss the main findings of the methodological overview of surveys on experience/perception on discrimination;
- based on conclusions and recommendations of these follow-up consultations, develop guidance for producing harmonized statistics on experience/perception of discrimination relevant to the compilation of indicator 16.b.1;
- Support, through capacity building, the implementation and integration of the developed module/questionnaire on the experience/perception of discrimination in existing or new country population surveys.
- Report on indicator 16.b.1 building on existing data collection and exchange programmes at national, regional and international level"

Please indicate new international standards that will need to be proposed and approved by an intergovernmental process (such as UNSC) for this methodology.

The methodology to be developed will rely and build primarily on existing international legal and statistical standards, including human rights law and the International Classification of Crimes for Statistical Purposes (ICCS). If new international standards will have to be developed (none are currently anticipated), they will be proposed to the UNSC through the Praia Group, and if applicable, through the mechanisms overseeing the ICCS.
Goal 16: Promote peaceful and inclusive societies for sustainable development, provide access to justice for all and build effective, accountable and inclusive institutions at all levels

When do you expect the methodological work on this indicator to be completed?

Towards the end of 2018 (depending on scope of methodology)

Are data and metadata already being collected from the National Statistical System for one or more components of this indicator?

Yes

If yes, please describe:

Some national statistical systems and regional organizations are collecting data for some of the components of this indicator (i.e. specific grounds of discrimination such as gender, age, indigenous, migrants, etc.). OHCHR has started a mapping of initiatives applied to measure experience/perception of discrimination, their compatibility with the proposed SDG indicator and suitability for global reporting. The main findings and preliminary recommendations from this technical review will be presented to an expert meeting. For the list of organizations and experts, see response to 6.2.1.

How do you plan to collect the data?

Joint survey/compilation with national agency and international entity

With what frequency is data expected to be collected?

Annually

Is there a process of data validation by countries in place or planned for this indicator?

Yes

If yes, please briefly describe:

At this stage, we are not in the position to describe the process of data validation that will be followed, but this will be discussed in due course within the Praia Group and with national statistical systems representatives which will be responsible for implementing the envisaged population surveys.
Goal 17: Strengthen the means of implementation and revitalize the Global Partnership for Sustainable Development

Goal 17

Target number: 17.5

Indicator Number and Name: 17.5.1 - Number of countries that adopt and implement investment promotion regimes for least developed countries

Agency: UNCTAD

Has work for the development of this indicator begun? Some preliminary work has been done. See UNCTAD Development and Globalisation: Facts and Figures (17.5) for presentation of preliminary results: http://stats.unctad.org/Dgff2016/partnership/goal17/target_17_5.html

Who are the entities, including national and international experts, directly involved and consulted in developing the methodology and or data collection tools?

The UNCTAD Investment Policy Monitor has been published since 2009. Consultation with member states for developing these data have been conducted via the World Investment Forum.

What is the involvement of or how do you plan to involve National Statistical Systems in the development of the methodology?

NSOs are not typically involved with collection of investment promotion data and hence they have had limited involvement. The indicator is sourced and derived from secondary data from existing UNCTAD database, the Investment Policy Monitor, which compiles data on International Investment Agreements.

Please briefly describe the process of developing the methodology for the indicator

Methodology has been in place since 2009. It has been developed with member states via the World Investment Forum.

Please indicate new international standards that will need to be proposed and approved by an intergovernmental process (such as UNSC) for this methodology.

For the moment, there are no plans to develop new statistical standards via UNSC, as WIR has operated as intergovernmental mechanism to date.

When do you expect the methodological work on this indicator to be completed?

For the moment, we propose using existing methodology. As thus, for the medium term, the proposed methodology can be considered completed.

Are data and metadata already being collected from the National Statistical System for one or more components of this indicator?
Goal 17: Strengthen the means of implementation and revitalize the Global Partnership for Sustainable Development

No

If yes, please describe:

How do you plan to collect the data?

The data are already collected as part of the reporting for the UNCTAD Investment Policy Monitor. See: http://unctad.org/en/pages/publications/Investment-Policy-Monitor.aspx

If the indicator involves multiple components from different data sources, please describe how each individual component of the indicator will be collected here.

N/A

With what frequency is data expected to be collected?

Annually

Is there a process of data validation by countries in place or planned for this indicator?

Data are published and also presented/validated at the WIR and via direct contact with investment agencies in member states.

If yes, please briefly describe:
Goal 17: Strengthen the means of implementation and revitalize the Global Partnership for Sustainable Development

Target number: 17.14

Indicator Number and Name: 17.14.1- Number of countries with mechanisms in place to enhance policy coherence of sustainable development

Agency: UNEP

Has work for the development of this indicator begun?

Yes. UNEP supports countries in integrating sustainable development within their national policy setting. This work provides UNEP with an understanding of the concepts behind enhancing the policy coherence of sustainable development; however, developing an indicator methodology for 17.14.1 is at a very early stage.

Who are the entities, including national and international experts, directly involved and consulted in developing the methodology/and or data collection tools?

UNEP will link this work to the UNEA work programme. The United Nations Environment Assembly is the primary intergovernmental forum responsible for the integration of sustainable development in national policy making.

What is the involvement of or how do you plan to involve National Statistical Systems in the development of the methodology?

No, this is primarily a policy process indicator; however, we will ensure that the IAEG and UNSD are informed of all methodological developments on this indicator.

Please briefly describe the process of developing the methodology for the indicator

The work will likely be undertaken in two stages: (i) using UNEP’s existing work on sustainable development policy to develop a framework for assessing policy coherence, and (ii) supporting countries in using the framework to assess their own policy coherence.

1st Stage: Initial draft methodology (August 2016 – June 2018):
- development of methodological specifications
- definition of recommendations to build capacity on the indicator
- development of a plan for implementation of the indicator

Potential 2nd Stage: Technical review and piloting in countries (January 2018 – December 2020):
- piloting in countries
- incorporating feedback from countries
- self-assessment by countries

Please indicate new international standards that will need to be proposed and approved by an intergovernmental process (such as UNSC) for this methodology.

None at this time; however, UNEA members will be informed on the progress.
Goal 17: Strengthen the means of implementation and revitalize the Global Partnership for Sustainable Development

When do you expect the methodological work on this indicator to be completed?

By 2020

Are data and metadata already being collected from the National Statistical System for one or more components of this indicator?

No

If yes, please describe:

How do you plan to collect the data?

To be determined, likely a questionnaire.

If the indicator involves multiple components from different data sources, please describe how each individual component of the indicator will be collected here.

With what frequency is data expected to be collected?

Every five years

Is there a process of data validation by countries in place or planned for this indicator?

To be determined

If yes, please briefly describe:
Goal 17: Strengthen the means of implementation and revitalize the Global Partnership for Sustainable Development

Target number: 17.17

Indicator Number and Name: 17.17.1 Amount of United States dollars committed to public-private and civil society partnerships

Agency: World Bank

Has work for the development of this indicator begun? Yes

Who are the entities, including national and international experts, directly involved and consulted in developing the methodology and/or data collection tools?

The indicator is developed by experts from the Public Private Partnership Unit of the World Bank Group.

What is the involvement of or how do you plan to involve National Statistical Systems in the development of the methodology?

The methodology is already developed and data collection is already ongoing. The plan is to engage with National PPP Units and/or regulatory agencies for the validation of the method and data.

Please briefly describe the process of developing the methodology for the indicator

"The methodology is available at the website http://ppi.worldbank.org/methodology/ppi-methodology. The following process is followed to develop indicator estimates:
- A team of researchers gather data for each of the regions using public sources (from government and MDBs websites); commercial news databases as well as from commercial specialized and industry publications/subscriptions
- Data is uploaded to an administrative website through a template to make sure data is standardized
- Data is validated by a group of experts at the World Bank Group.
- Data is later uploaded to the public website (www.ppi.worldbank.org) and made available free of charge."

Please indicate new international standards that will need to be proposed and approved by an intergovernmental process (such as UNSC) for this methodology.

The IAEG-SDG will need to decide if the indicator is fit for purpose for measuring target 17.17. The current indicator measures the “Amount of United States dollars committed to public-private partnerships” but not of civil society. Moreover, within public-private partnerships it does not cover education and health, which may account for a significant part of PPP projects.

When do you expect the methodological work on this indicator to be completed?

The methodology is already defined.

Are data and metadata already being collected from the National Statistical System for one or more components of this indicator?

No
Goal 17: Strengthen the means of implementation and revitalize the Global Partnership for Sustainable Development

If the indicator involves multiple components from different data sources, please describe how each individual component of the indicator will be collected here.

"The data is gathered from public sources (from government and MDBs); commercial news databases as well as from commercial specialized and industry publications/subscriptions

The database’s research team uses the following sources:
a. commercial news databases such as Factiva, Business News America, ISI Emerging markets, and the Economist Intelligence Unit’s databases
b. specialized and industry publications such as Thomson Financial’s Project Finance International, Euromoney’s Project Finance, Media Analytics’ Global Water Intelligence, Pisent Masons’ Water Yearbooks, and Platt’s Power in Asia
c. specialized portala such as Privatization, IPAnet, and Privatization Barometer
d. Internet resources such as web sites of project companies, privatization or PPP agencies, and regulatory agencies
e. sponsor information primarily through their Web sites, annual reports, press releases, and financial reports such as 10K and 20F forms submitted to the NYSE
f. multilateral development agencies primarily through information on their Websites, annual reports, and other studies

If necessary, information is also requested from or verified with project companies, sponsors, and regulatory agencies"

With what frequency is data expected to be collected?

The Private Participation in Infrastructure (PPI) Database collects data on the proposed indicator every six months and it is publically available at www.ppi.worldbank.org. We can provide updates on this specific indicator every six months (data is available typically 4 months after the end of the semester). The Private Participation in Infrastructure (PPI) Database collects data on the proposed indicator every six months and it is publically available at www.ppi.worldbank.org. We can provide updates on this specific indicator every six months (data is available typically 4 months after the end of the semester).

Is there a process of data validation by countries in place or planned for this indicator?

No

If yes, please briefly describe:

The World Bank plans to do country level validation with national PPP units and/or regulatory agencies.

If you have any additional comments that you believe would be helpful to IAEG-SDG members in analysing the work plan and methodological development of the indicator, please provide them here:
Goal 17: Strengthen the means of implementation and revitalize the Global Partnership for Sustainable Development

"The terms PPP is defined as: “any contractual arrangement between a public entity or authority and a private entity, for providing a public asset or service, in which the private party bears significant risk and management responsibility.”

The term infrastructure refers to:
• Energy: electricity generation, transmission, and distribution, and Natural gas transmission and distribution pipelines
• Information and communications technology (ICT): ICT backbone infrastructure
• Transport: Airports, railways, ports, and roads.
• Water: potable water treatment and distribution, and sewerage collection and treatment.

Other sector such as education and health may account for a significant part of PPPs but they are not captured by the database. Expanding the data to include PPPs in other sector beyond infrastructure is something that the World Bank is considering but it is currently limited by budget constraints.

Unfortunately PPI database does not collect data on civil society partnerships and this will not fit the currently methodology of data gathering and is outside the present work’s scope."
Goal 17: Strengthen the means of implementation and revitalize the Global Partnership for Sustainable Development

Target number: 17.18

Indicator Number and Name: Indicator 17.18.2: Number of countries that have national statistical legislation that complies with the Fundamental Principles of Official Statistics

Agency: PARIS21

Has work for the development of this indicator begun? Yes

What is the involvement of or how do you plan to involve National Statistical Systems in the development of the methodology?

In the case of the Indicator 17.18.2, PARIS21 will involve the National Statistical System by asking them to provide the Statistical Act/Law of their country where it is not already available.

Please briefly describe the process of developing the methodology for the indicator

Compliance: A country’s statistics law will be considered compliant with the UN Fundamental Principles of Official Statistics if the law has provisions relating to all the ten Principles.

When do you expect the methodological work on this indicator to be completed?

Already completed

Are data and metadata already being collected from the National Statistical System for one or more components of this indicator?

Yes

If yes, please describe:

Yes but for a limited number of countries only.

How do you plan to collect the data?

Joint survey/compilation with national agency and international entity

With what frequency is data expected to be collected?

Annually

Is there a process of data validation by countries in place or planned for this indicator?

Yes

If yes, please briefly describe:

"1 – For the survey: Each country will fill out information relating to each of the ten UNFPOS. Guidelines on each of the questions will be provided (see below) and each country will be required to provide the necessary evidence on each response such as website links to the law and the specific paragraph or article."
Goal 17: Strengthen the means of implementation and revitalize the Global Partnership for Sustainable Development

2 – PARIS21 to employ text mining for each country’s statistics law to assess compliance on each of the UNFPOS. The same guide as above on a range of text to be mined under each Principle will be provided. Efforts will also be undertaken to obtain and verify data from statistics laws that are written in local languages.

If you have any additional comments that you believe would be helpful to IAEG-SDG members in analysing the work plan and methodological development of the indicator, please provide them here:

The methodology proposed will focus on reference to the principles and not their implementation level.
Annex: Tier III Indicators for which no work plan was received

1.4.1 – Proportion of population living in households with access to basic services (no custodian agency, UNEP, ITU, UPU listed as “other involved agencies”)

1.a.1 – Proportion of resources allocated by the government directly to poverty reduction programmes (World Bank listed as possible custodian agency)

1.b.1 – Proportion of government recurrent and capital spending to sectors that disproportionately benefit women, the poor and vulnerable groups (no custodian agency, UN-Women listed as “other involved agency”)

2.c.1 – Indicator on food price anomalies (FAO listed as possible custodian agency)

5.a.2 – Proportion of countries where the legal framework (including customary law) guarantees women’s equal rights to land ownership and/or control (FAO, World Bank and UN-Women listed as possible custodian agencies)

8.b.1 – Total government spending in social protection and employment programmes as a proportion of the national budgets and GDP (ILO listed as possible custodian agency)

12.a.1 – amount of support to developing countries on research and development for sustainable consumption and production and environmentally sound technologies (UNEP, UNESCO, World Bank and OECD listed as possible custodian agencies)

12.c.1 – Amount of fossil-fuel subsidies per unit GDP (production and consumption) and as a proportion of total national expenditure on fossil fuels (UNEP listed as possible custodian agency)

14.7.1 – Sustainable fisheries as a percentage of GDP in small island developing States, least developed countries and all countries (no listed custodian agency; FAO, UNEP and World Bank listed as “other involved agencies”)

15.a.1/15.b.1 (partially Tier III) – Official development assistance and public expenditure on conservation and sustainable use of biodiversity and ecosystems (OECD, UNEP and World Bank listed at possible custodian agencies)

16.7.1 – Proportion of positions (by sex, age, persons with disabilities and population groups) in public institutions (national and local legislatures, public service and judiciary) compare to national distribution (no custodian agency, UN-Women and UNDP listed as “other involved agencies”)

17.6.1 – Number of science and/or technology cooperation agreements and programmes between countries, by type of cooperation (UNESCO listed as possible custodian agency)

17.7.1 – Total amount of approved funding for developing countries to promote the development, transfer, dissemination and diffusion of environmentally sound technologies (OECD and UNEP listed as possible custodian agencies)

17.13.1 – Macroeconomic Dashboard (World Bank listed as possible custodian agency)
Annex: Tier III Indicators for which no work plan was received

17.18.1 – Proportion of sustainable development indicators produced at the national level with full disaggregation when relevant to the target, in accordance with the Fundamental Principles of Official Statistics (UNSD listed as possible custodian agency)
