Second UNECE Data Flow Pilot Study Results

Claire Plateau
Co Chair of the TTDF
Insee – France

7 November 2018
Objectives of the Study

- Inform the IAEG’s and CSSA’s deliberations of the implementation guidance
- Analyze current data flows, focusing on indicators where validation of global statistics is difficult
- Explore methods to facilitate understanding between NSOs and Custodian Agencies (CA)
Design Team

- Members of the UNECE CES Task Team on Data Flows
  - prepared the study design and survey instruments
  - analyzed results, and
  - wrote sections of the report

- Countries: (France (co-chair), Turkey (co-chair), Belarus, Denmark, Germany, Kazakhstan, Russian Federation, Sweden, Switzerland, United Kingdom, United States.

- Agencies: FAO, ICAO, IMF, OECD, UN WOMEN, UNEP, UNODC, WHO
Methods

- Observational study of country and custodian agency actual experiences
- Based on a selection of 10 indicators to represent different cases where data are not sent directly by countries to agencies
- Survey prepared for NSOs and for CAs regarding
  - their process of data transmission (coordination, use of NRP, attitude towards SDMX)
  - the common challenges and potential solutions to facilitate data transmission of each indicator examined
  - a self-assessment of what works well and what does not
Participants

- 38 countries and 4 agencies responded, including 31 of 56 UNECE countries, but also 7 countries from ESCAP and ECLAC

- As a separate activity initiated by IAEG countries, the survey also informed examinations of SDG data flows in the UNECA and ESCAP regions, which could facilitate cross cutting analyses and solutions

- This wide and voluntary participation shows the strong committment of both countries and agencies to improve data flows for the best global data based on
  - national harmonised data that have been validated by countries.
Limitations of the Study

The pilot was fielded to describe experiences of countries in the UNECE region, which share similar data production process and have strong data coordination. Therefore,

- results do not describe circumstances for countries where variations in the process can affect the data flows and the comparability of data.

- findings represent data flows where statistical coordination is likely to be strongest

- only Tier 1 indicators were selected. Data validation for indicators classified as Tier 2, using non-statistical or non-traditional data sources, may be more challenging
### List of selected indicators for the survey

</table>
Key Observations: (1)
A communication disconnect remains…

- Some country focal points are still not known to agencies. Agency contacts are sometimes not known to countries (e.g., 9.1.2 is lacking the precise agency focal point contact information; 17.2.1 is lacking the (previously established) focal points)

- Some NSOs identified focal points for SDGs without being aware of existing and well-managed data flows (e.g. for 17.2.1 ODA)

- Agencies’ data collection calendars are often incomplete and difficult to find
The dashboard should be a **key reference document**, agreed upon, up to date, and easily accessible to countries and agencies.

Contact details must be complete for country and agency focal points.

A link to the agency data request calendar would improve communication.

Country focal points should be informed by agencies of previously established data flows.

Custodian agencies should copy country SDGs focal points when they request national data (even if request is broader than SDGs).
Key Observations: (2)

Some Tier 1 and 2 metadata are insufficient...

- Some metadata are incomplete or misclassified (17.3.1), lacking (3.3.4), difficult to understand, or have open questions and inconsistencies (6.4.2)

- Countries sometimes disagree with metadata, which impose a data source (15.4.2) or a method of estimation done by agencies (3.9.1)

- Metadata for Tier 1 are not currently within the purview of IAEG-SDGs which can be problematic.
Key Observations: (2)
...but IAEG-SDGs could review tier classifications.

- Metadata for Tier 1 and Tier 2 indicators should be systematically reviewed to ensure that they conform to the quality and the format recommended by the IAEG-SDGs.

- Some metadata require a method using data outside of the national system. Yet, national data can be used instead that otherwise conform to the metadata. This should be examined by the IAEG-SDGs.

- Priority of review should be given to indicators subject to country signature.

- A dedicated venue for metadata discussion on unresolved issues would be welcome.
Key Observations: (3)
Validation processes are not transparent...

- Sometimes national focal points are not asked to validate data associated with their country published in the UN global data base.
  - In some cases, NSOs disagree with the data published and have detected obvious errors (e.g., 9.1.2 on road transport)
- Data validation by country is sometimes complex and requires sufficient time for countries and agencies
- Countries require their responsibility regarding the data being published in the global database to be clear
Key Observations: (3)

...but processes can be updated to allow maturation

- Country focal points should be invited to validate, even if a courtesy
- Promote a documentation process noting
  - the source of data in the global database
  - if the data were modeled by the agency
  - the status of country validation (validated, can’t be validated, pending review, not validated by country)
- allowing all globally harmonized national statistics to be published in the UNSD database
Key Observations: (4)

Existing data flows should be used if possible...

- Data or related data are already collected with existing reporting mechanism (e.g., 6.4.1, 6.4.2)
- Countries would like to avoid duplicate reporting, even if an adaptation of the questionnaire is required
Key Observations: (4)

…but agencies should adapt extant flows, if needed

- Country focal points should always be informed of the existing data collection process and be invited to validate with all necessary information provided by the agency
Conclusions and way forward
Important progress has been made...

- Participation in the study shows a strong involvement of the countries and agencies to improve the quality of data transmitted

- Countries and agencies noted their appreciation of the on-going efforts made by UNSD to facilitate data flows (e.g., release of a dashboard of contacts)

- Countries noted their appreciation of the efforts made by agencies to answer their questions
Important progress has been made… but there are steps we can take to improve

- Improve coordination by making a dashboard with specific contacts in countries and in agencies, validated by both parties and regularly updated.
  - This document is essential as a first step to facilitate coordination at the country level and awareness of NSOs of all data transmitted.

- Provide clear and accessible metadata for Tier 1 and 2 indicators (translation in UN languages?).

- Inform national focal points’ information before the release of their national data in the global database, even if a courtesy
The complete report of the second data flow pilot is expected in December 2018.

Specific issues and proposed solutions are listed in user-friendly charts.

<table>
<thead>
<tr>
<th>Proposed Lead</th>
<th>Possible Solutions</th>
</tr>
</thead>
<tbody>
<tr>
<td>NSO (with UNSD)</td>
<td>1. National country focal point information should be added to the UNSD global database as a resource for agency focal points (at the country’s discretion).</td>
</tr>
<tr>
<td></td>
<td>2. National contacts provided by NSOs should be coordinated at the national levels and consistent with the mandate received by the custodian agency from country government. Such coordination is also essential for reporting non-statistical indicators.</td>
</tr>
<tr>
<td></td>
<td>3. National country focal points should include any other national contacts for data flows related to SDG indicators in the UNSD global database.</td>
</tr>
<tr>
<td></td>
<td>4. National country focal points should copy these other national contacts on their communications with agency focal points.</td>
</tr>
<tr>
<td>IAE/SDGs (with UNSD)</td>
<td>1. The IAE/SDGs do not have the governance mechanism or mandate to receive metadata for Tier I and II indicators. Countries feel this is a clear need.</td>
</tr>
<tr>
<td></td>
<td>2. Major changes in metadata files should be reviewed by IAE/SDGs. IAE/SDGs should receive feedback from countries on metadata and follow up with custodian agencies as needed.</td>
</tr>
<tr>
<td></td>
<td>3. It would be helpful to denote in the UNSD global database and/or official indicator list which global indicators are non-statistical in nature, and those that apply to a subset of countries only (for example, SDG 11, II-A, II-C, II-G, II-H).</td>
</tr>
<tr>
<td></td>
<td>4. It also raises country validation issue. Note is added indicating that the data are modeled by the custodian agency and the status of validation is difficult. National indicators (validated by country/country can’t validate and validated by country/pending request) is included. Thus, all globally harmonized national data and statistics are published in the UNSD database. This could be recommended to update the 2018 UNSD data flow guidance. (Near unanimous opinion.)</td>
</tr>
<tr>
<td>Custodian Agencies (with UNSD)</td>
<td>1. The data sources used to calculate harmonized statistics should be referenced in the UNSD global database. (Unanimous opinion among respondents.)</td>
</tr>
<tr>
<td></td>
<td>2. The UNSD calendar should indicate agencies’ data collection and validation timeframe. When data are unknown, tentative dates should be used so NSO work program can plan ahead.</td>
</tr>
<tr>
<td></td>
<td>3. Agency contact information should be updated/updated for indicators.</td>
</tr>
<tr>
<td></td>
<td>4. Some indicators have more than one metadata file. This can be confusing. The files should be integrated by custodian agencies.</td>
</tr>
<tr>
<td></td>
<td>5. The following indicators seem to have missing metadata or require clarification, based on the data flow pilot include: 5.2.2, 17.1.2, and 17.3.1.</td>
</tr>
<tr>
<td></td>
<td>6. Work plans for some Tier III indicators are outdated and need to be updated.</td>
</tr>
<tr>
<td>UNSD (with countries and agencies)</td>
<td>1. A dashboard is needed to support communication between countries and agencies. This dashboard should integrate contact information for country and agency focal points and data collection schedules. The dashboard should be agreed upon by both countries and agencies, should be up-to-date, and easily accessible online.</td>
</tr>
<tr>
<td></td>
<td>2. Any updates made in the metadata files should allow notification and tracking of these updates by national focal points. This will help NSOs respond to agency requests in an efficient manner.</td>
</tr>
<tr>
<td></td>
<td>3. The validation status should be displayed in the UNSD global database, and updates (such as new postings by custodian agencies or revisions) should be communicated to national and agency focal points. For example, such changes could generate an automated email to focal points. (Consensus opinion.)</td>
</tr>
</tbody>
</table>

---

3 This coordination is especially necessary for mandatory data flows, such as DAC flows, where the established national contact is nominated by the government’s foreign ministry or UN national representative mission.

4 Comments observed through the course of their other activities, that multiple metadata files were posted for the following indicators (not the focus of the data flow pilot): 1.1.1, 1.3.1, 2.2.1, 5.3.3, 6.6.1.

5 Countries also observed that metadata were missing needed clarification for the following SDG indicators (not the focus of the data flow pilot): 2.2.2, 1.2.2, 3.3.4, 4.4.1, 5.5.2, 8.9.1, 9.0.2, and 11.3.1.
Thank you for your attention
