

## Presentation of the TOSSD methodology

### Total Official Support for Sustainable Development (TOSSD)

#### *Side event at the IAEG-SDGs meeting*

Stockholm, 6 November 2018

***Pali Lehohla***

*Expert and member of the TOSSD Task Force*

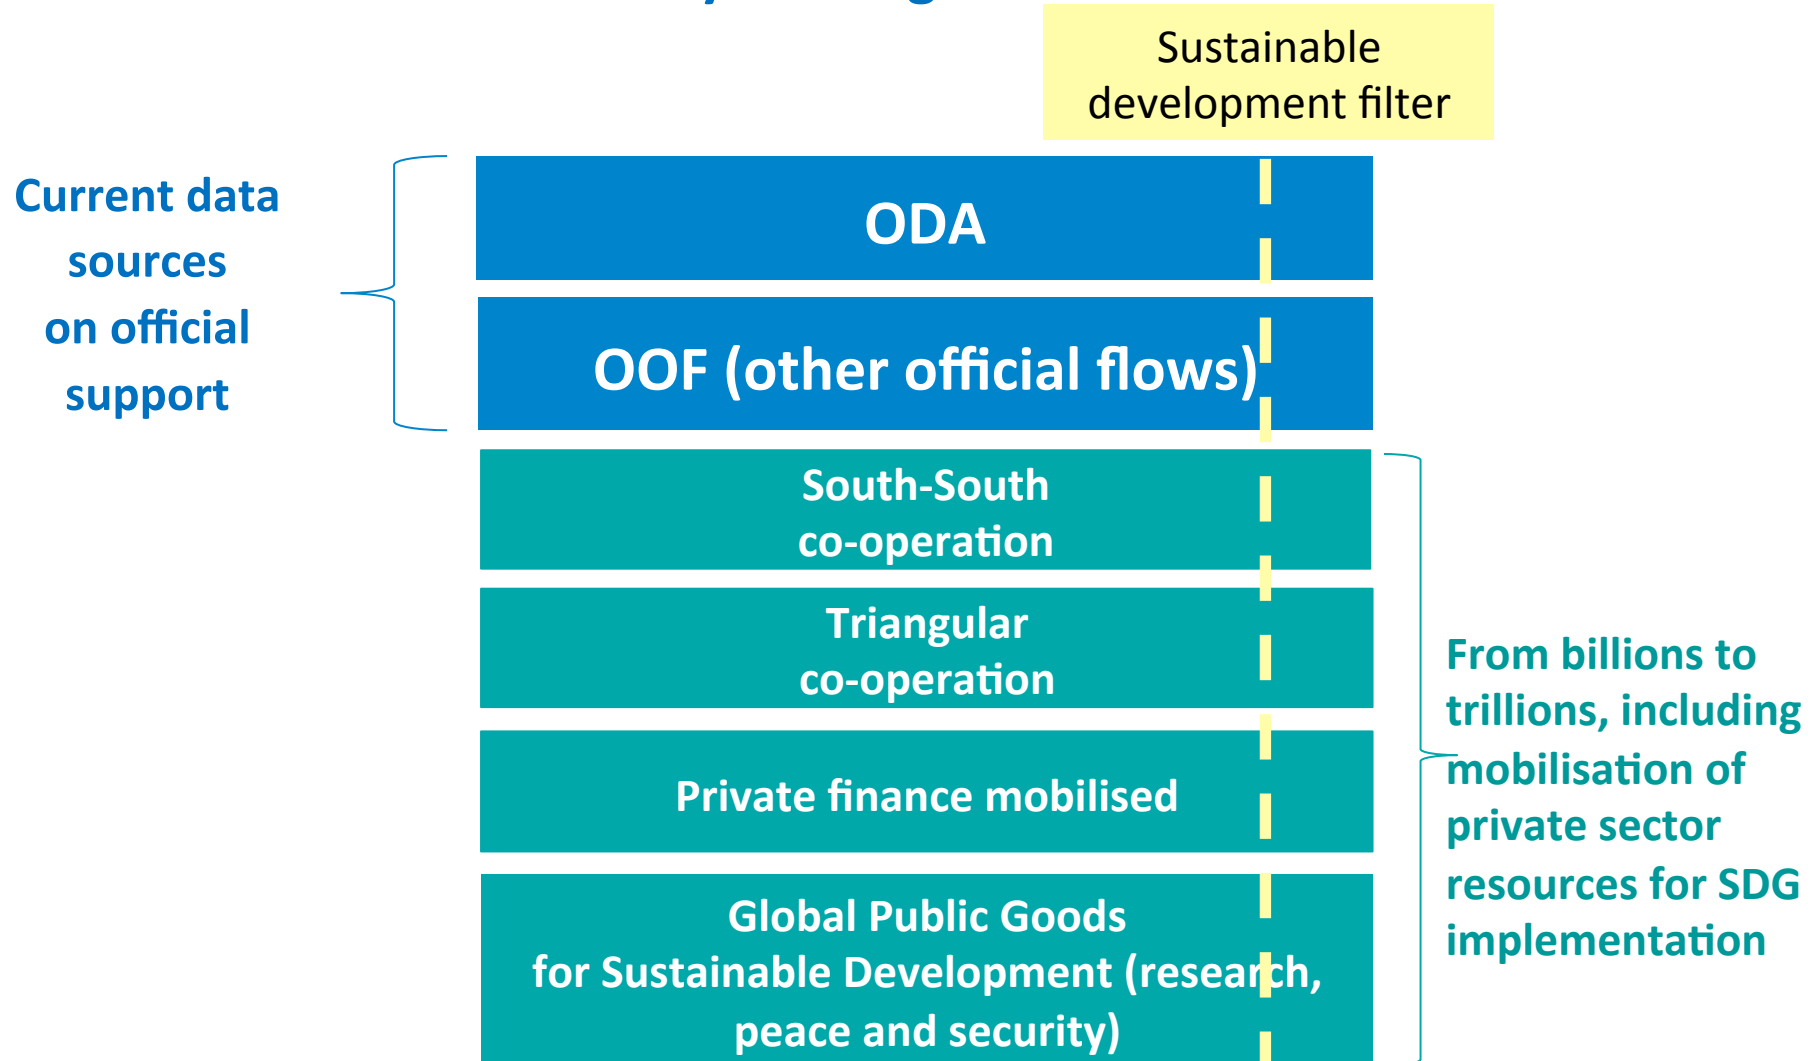

# Outline

- **Why does TOSSD matter?**
  - Emergent and explicit private sector involvement in SDGs
  - Nascent influence of social entrepreneurship
  - Moving from billions to trillions
- **How can TOSSD contribute to the SDG indicator framework?**
  - Mutual benefit in the emergent data sources
- **How has the methodology been developed?**

# Why does TOSSD matter?

Resources for sustainable development are not entirely captured by existing statistics

# Why TOSSD?

## How can this be useful to NSOs?

- **Strengthening Africa reporting and monitoring systems across NSOs, Reserve Banks and tax authorities**
  - E.g. can contribute to **Africa's** UNECA/AU President Mbeki led illicit financial flows enquiry – a major challenge for Agenda 2063 and SDGs
- **Supporting agendas currently being discussed by the statistical community**
  - Mutual benefit to and from the **Conference of European Statistician (CES)** on resource flows in global manufacturing and foreign direct investment: implications for compiling **national accounts** and **balance of payments statistics**.
- **Providing detailed information on investments made by the private sector, including:**
  - E.g. OECD initiatives on understanding and appropriate reporting on multinational operations
  - It will shed light on the emergent Social Enterprise movement and the related statistical compilation and reporting requirements
- **Providing one reporting system** for external development finance flows
- Helping to move the agenda from **mobilising the billions to the trillions.**

# How can TOSSD contribute to the SDG indicator framework? The proposal of the TOSSD Task Force

- **TOSSD can be a data source for selected existing financing indicators:**
  - Upgrading Tier III to Tier II indicators (e.g. 7.a.1: “International financial flows for clean energy R&D”)
  - Complementing data sources for Tier I indicators (e.g. 10.b.1: “total resource flows for development”)
- **TOSSD as a complementary indicator of the means of implementation in the long run (2020 review)**

# How has the methodology been developed?

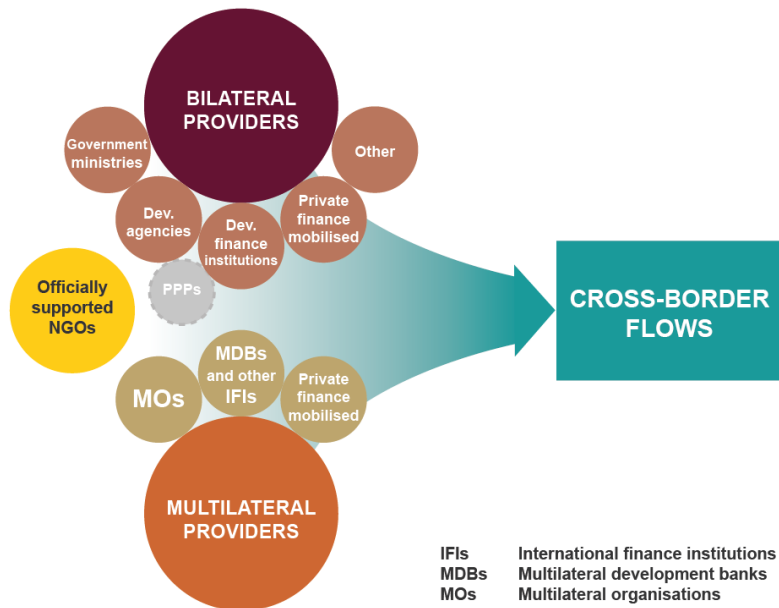

Resources to developing countries

Global level expenditures

## THE TOSSD MEASUREMENT FRAMEWORK

CROSS-BORDER FLOWS

DEVELOPMENT ENABLERS AND GLOBAL CHALLENGES

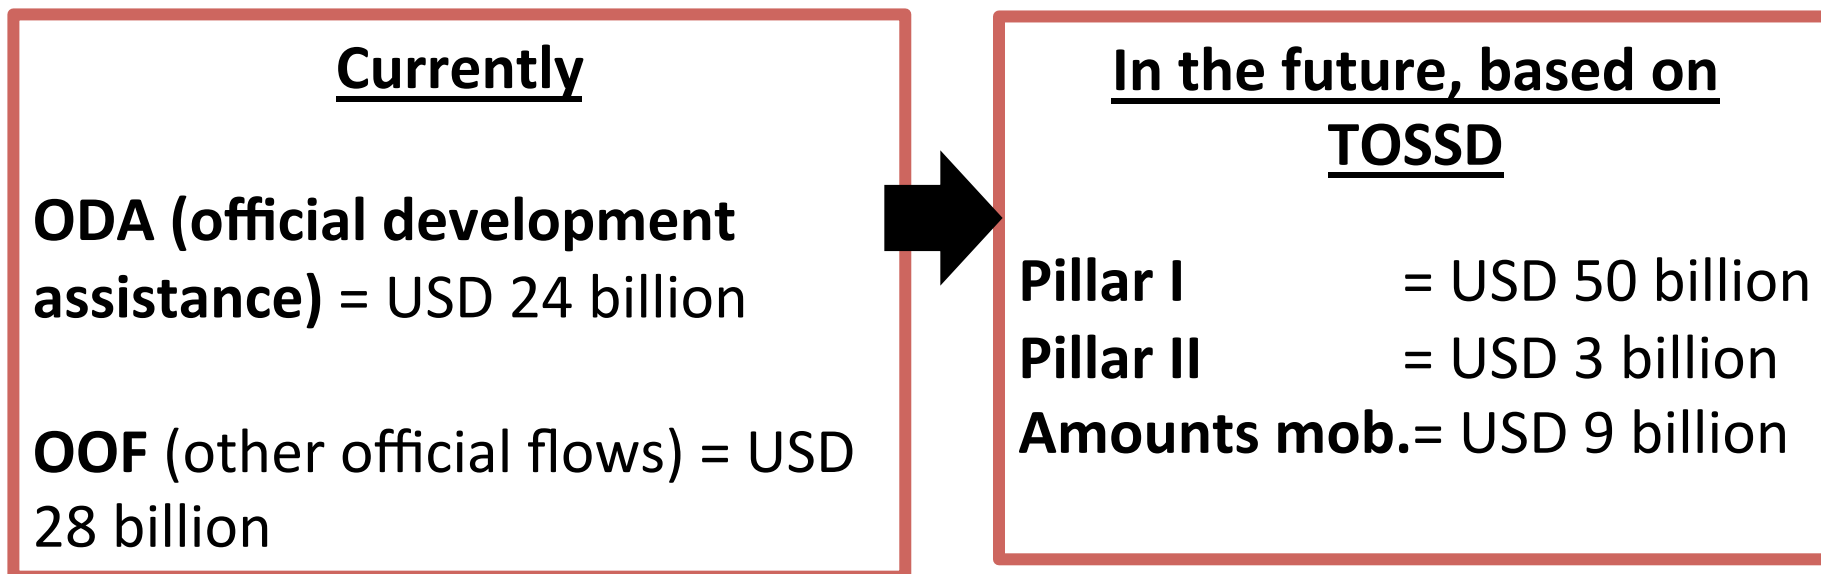

IFIs International finance institutions  
 MDBs Multilateral development banks  
 MOs Multilateral organisations

“Total official international support to infrastructure”

# How has the methodology been developed?

## The work of the International TOSSD Task Force

Established in 2017 following the call at the **3<sup>rd</sup> International Conference on Financing for Development** to develop the TOSSD framework in an open, inclusive and transparent manner.

- **Co-chairs:** Mr Risenga Maluleke (South Africa) and Mr Laurent Sarazin (EU).
- **Members:** 25 experts from partner countries, traditional and emerging providers, as well as international organisations (8 experts from NSOs).
- **Mandate:** develop the TOSSD statistical framework (definitions, measurement parameters and methodologies, eligibility criteria).
- **Task Force website:** all documents are posted there to allow for “open, inclusive and transparent” discussions.
- **Consultations:** country pilots (e.g. Senegal, Philippines, Nigeria, Costa Rica), outreach events (e.g. UN StatCom, FFD Forum).

# How has the methodology been developed?

## A robust set of emerging reporting instructions

- **Definitions** (e.g. sustainable development, resource flows)
- **Statistical concepts and taxonomies** (e.g. sector, financial instrument)
- **Reporting principles** (e.g. quality standards, activity-level)
- **Specific methods**
  - In-kind technical co-operation
  - Private finance mobilised

# How has the methodology been developed?

## Timeline of TOSSD development

- **By the end of 2018:** finalise the methodology for the TOSSD “cross-border resource flows” pillar.
- **Early 2019:** conclude work on the TOSSD methodology including on “development enablers/global challenges” pillar.
- **Throughout 2019:** TOSSD data collection from provider countries and institutions. Regional consultations in Africa, Latin America, Asia.
- **From 2020:** TOSSD data available for possible use in monitoring SDG finance.

## Next steps

- **What is the best approach to feature TOSSD in the UN StatCom agenda in 2019?**
- **How can TOSSD be integrated in the 2020 review of SDG indicators?**

# *Thank you!*

# 1. What is TOSSD?

- **TOSSD is a statistical measure that includes all officially-supported resource flows to promote sustainable development in developing countries, to support development enablers and to address global challenges at regional or global levels.**
  - Official bilateral and multilateral institutions.
  - Traditional donors and emerging economies, including through south-south co-operation and triangular co-operation.
  - All instruments (concessional and non concessional).
  - Also captures private resources that are mobilised through official means.
- **TOSSD is complementary to ODA. It covers a broader range of flows focused on sustainable development.**
  - Need to move “from billions to trillions” of financing to achieve the SDGs.

## 2. Why TOSSD?

### Who will benefit and use TOSSD data?

- **Recipient countries:**
  - A better and more complete overview of incoming flows and co-operation frameworks.
  - Increased accountability of providers.
  - Leading to better allocation of resources.
- **Providers:**
  - Better coordination and division of labour among providers.
  - Better allocation of public resources.
- **International community:**
  - Supports the monitoring of resources towards the SDGs.
  - Improved understanding of private sector resources.
  - Incentives for further private sector mobilisation.

## 4. TOSSD in practice

### A few examples of statistical elements agreed or being finalised by the Task Force

- The definition of sustainable development is based on the “Report of the World Commission on Environment and Development” (Brundtland Report)
  - “The concept of “Sustainable Development” is defined as development that meets the needs of the present without compromising the ability of future generations to meet their own needs.”
- The concept of “framework of collaboration” to be able to reflect all types of co-operation used in the 2030 Agenda:
  - South-South Co-operation
  - Triangular Co-operation
  - Islamic Finance
- The measurement of technical co-operation:
  - Using a « purchasing power parity » factor to take into account different salary levels between different countries.

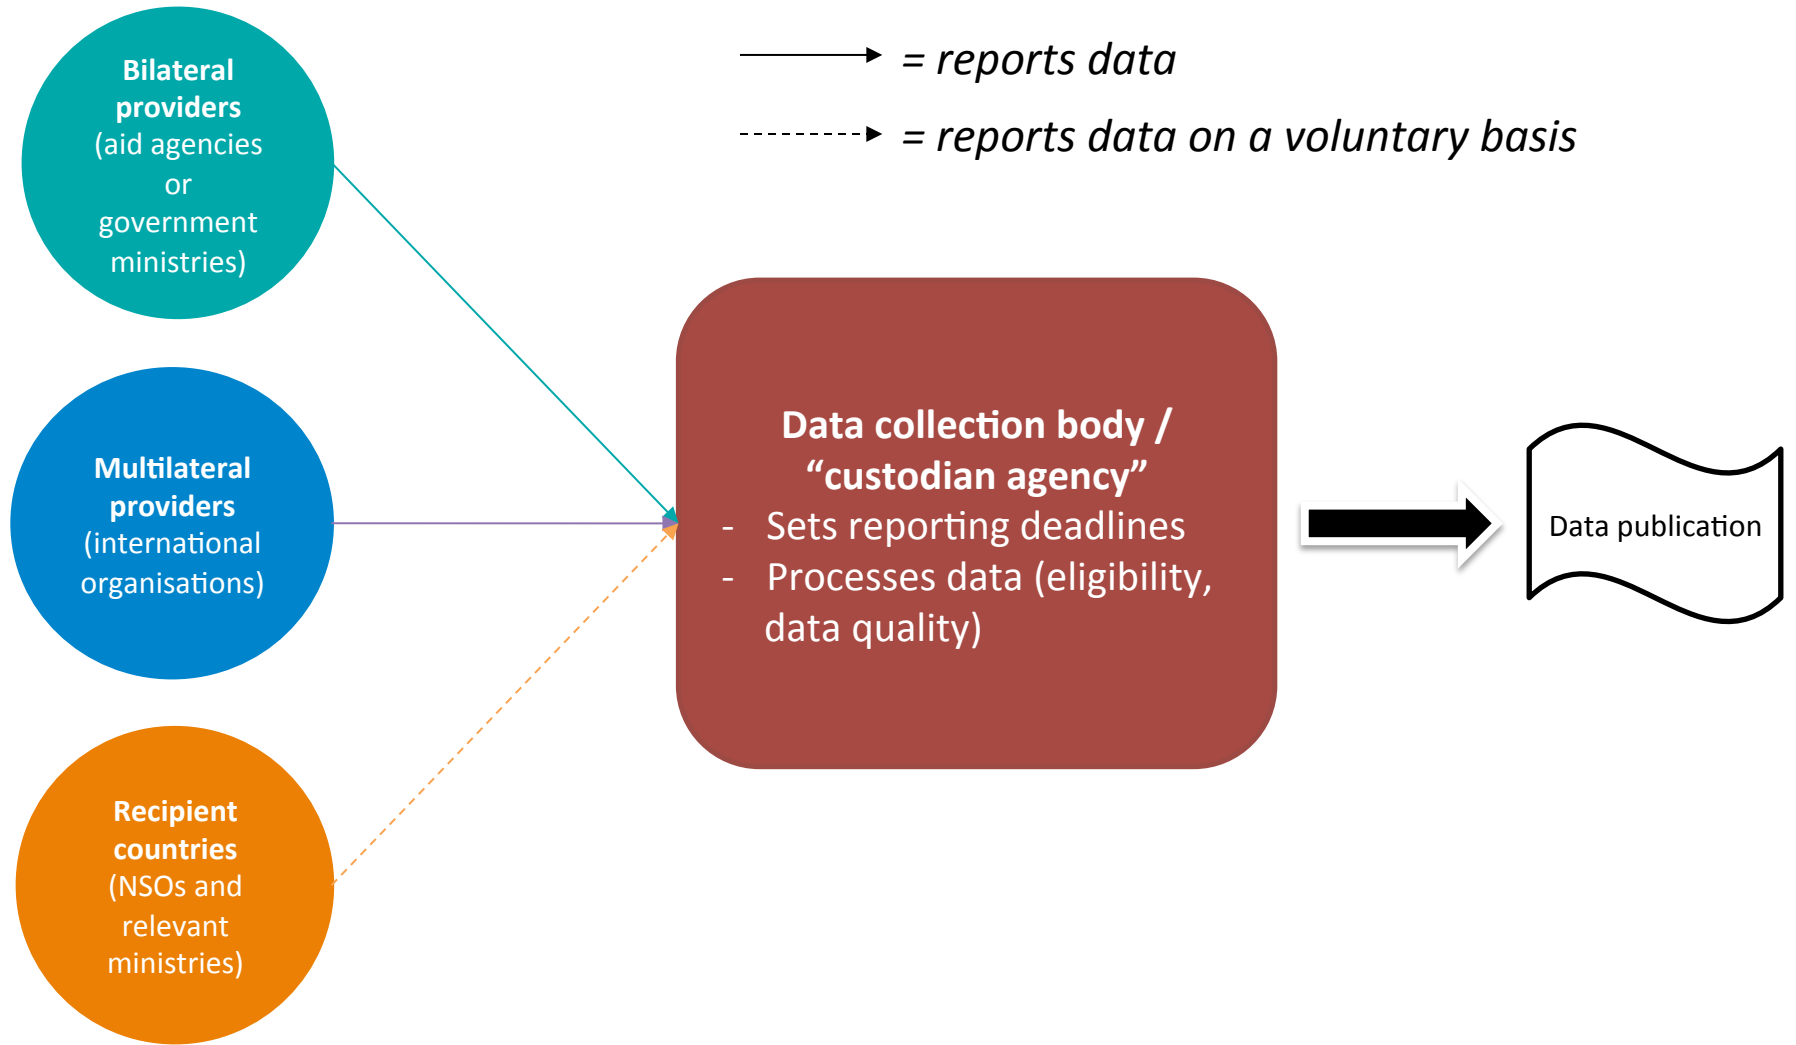

## 5. Potential of TOSSD for the global SDG monitoring framework

- Access to comprehensive data on all sources of development finance, reported by both traditional donors and emerging economies.
- TOSSD is also specifically designed to look at the sustainability aspects of development co-operation.
- Potential confirmed by recent pilot studies in Nigeria and Costa Rica: TOSSD would fill critical information gaps related to SDG finance.

# 4. TOSSD in practice

## How will data be collected?

# 4. TOSSD in practice

## Publication of TOSSD data: a platform in construction

TOSSD to the world for all sectors and all SDGs in 2016
