

Innovative approaches to monitoring SDG 6.1.1

Integrating water quality testing into household surveys

12th Meeting of Inter-Agency & Expert Group on SDG Indicators
2-4 November, 2021

WHO/UNICEF Joint Monitoring Programme (JMP)
for Water Supply, Sanitation and Hygiene

SDG 6.1.1 Proportion of population using safely managed drinking water services

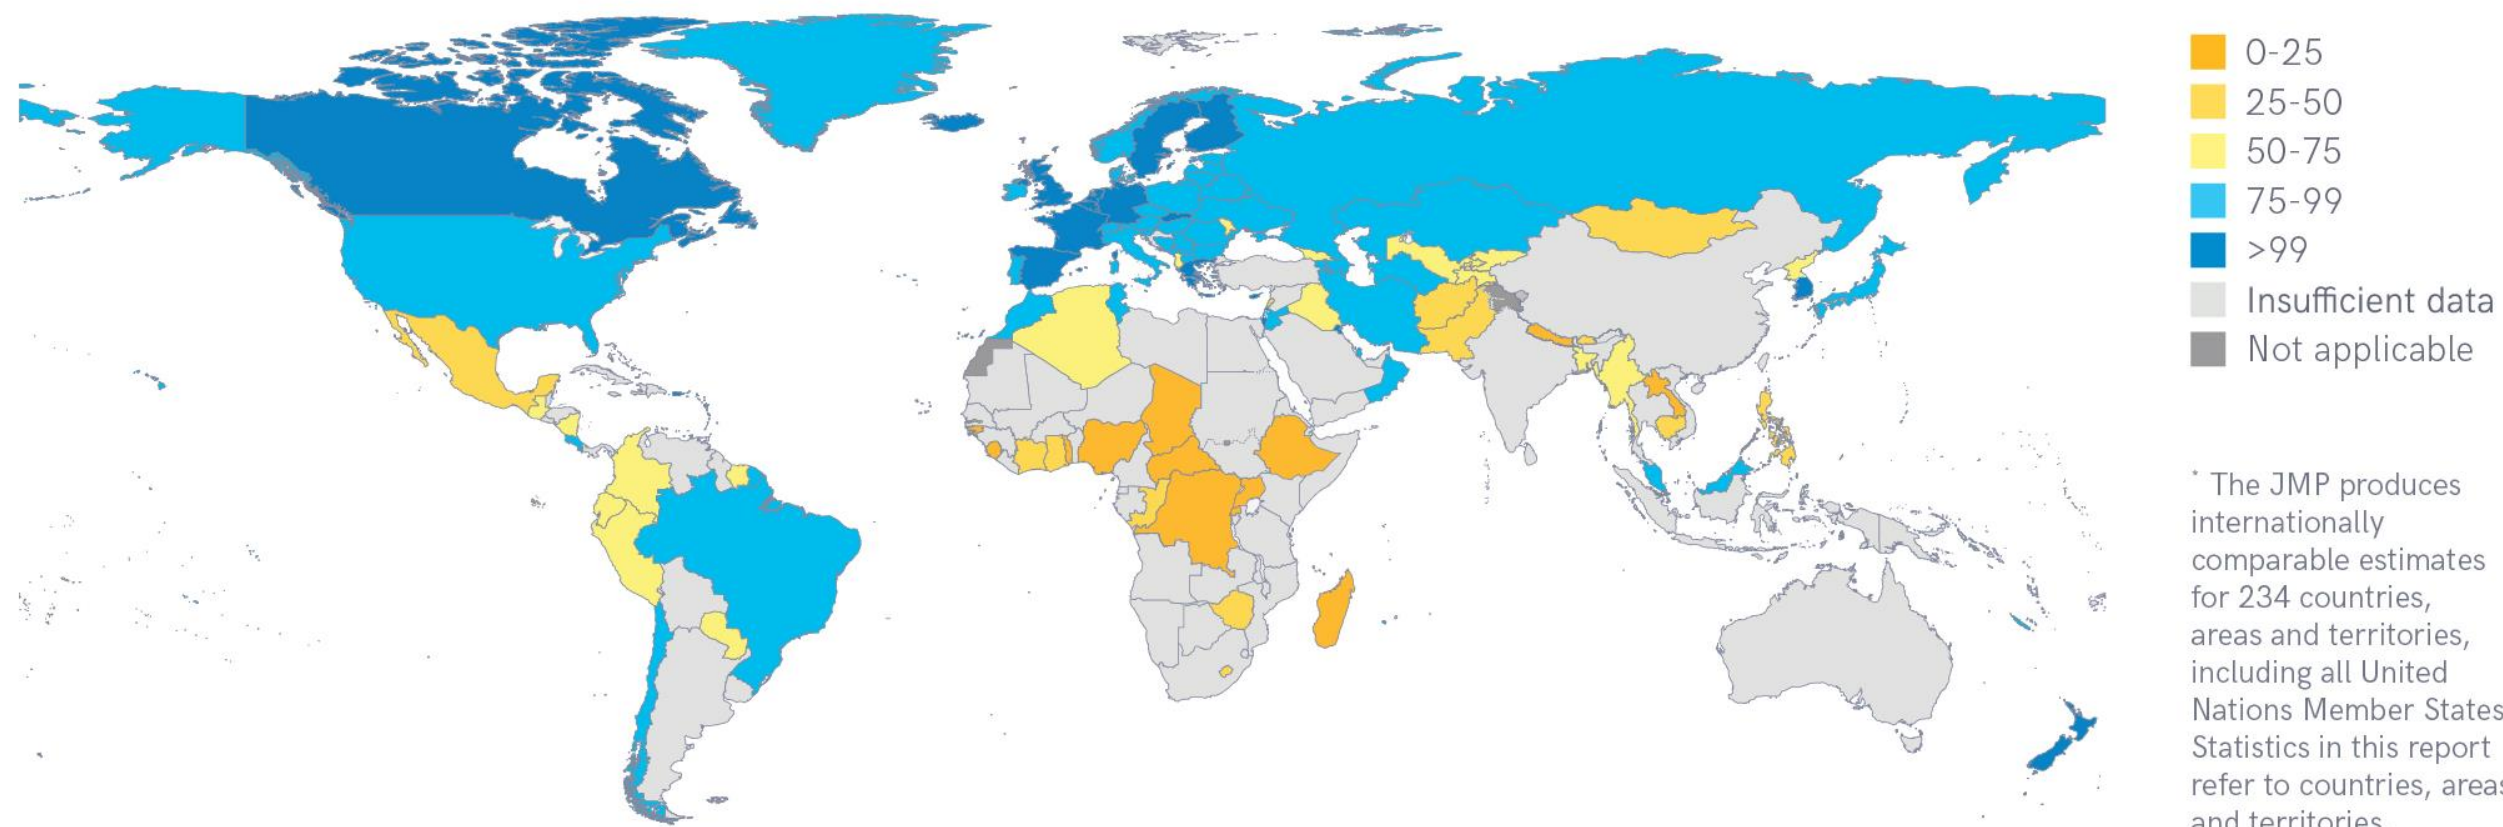

| SERVICE LEVEL | DEFINITION |
|-----------------------|---|
| SAFELY MANAGED | Drinking water from an improved source that is accessible on premises, available when needed and free from faecal and priority chemical contamination |
| BASIC | Drinking water from an improved source, provided collection time is not more than 30 minutes for a round trip, including queuing |
| LIMITED | Drinking water from an improved source, for which collection time exceeds 30 minutes for a round trip, including queuing |
| UNIMPROVED | Drinking water from an unprotected dug well or unprotected spring |
| SURFACE WATER | Drinking water directly from a river, dam, lake, pond, stream, canal or irrigation canal |

FIGURE 25 SDG ladder for drinking water services

Note: Improved sources include: piped water, boreholes or tubewells, protected dug wells, protected springs, rainwater, and packaged or delivered water.

138 countries had estimates for safely managed services in 2020

Free from faecal and priority chemical contamination

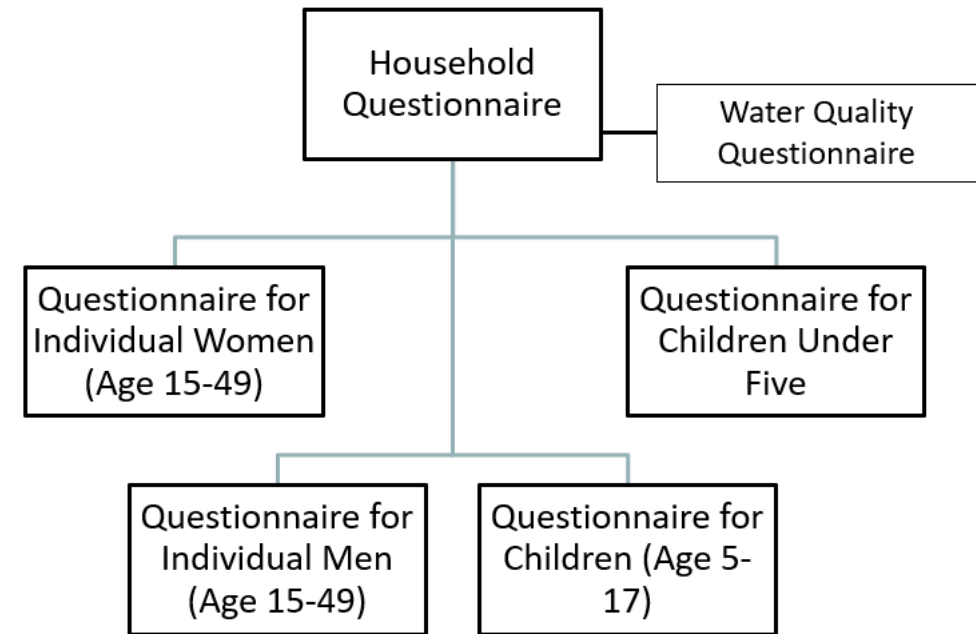

WHO guidelines:

- No *E. coli* (or alternatively thermotolerant coliforms) detected in a 100 mL sample
- Arsenic: a concentration of arsenic not exceeding the WHO provisional guideline value of 10 µg/L (10 micrograms per litre)
- Fluoride: a concentration of fluoride not exceeding the WHO guideline value of 1.5 mg/L (1,500 micrograms per litre)

Development of water quality testing module in collaboration with UNICEF supported Multiple Indicator Cluster Surveys

- Household survey programme based on full government ownership since 1995
- Global MICS Team provides technical support for standardization and comparability
- Representative data based on probabilistic samples
- Standard questionnaires customized to country needs
- Standard tools for all survey stages, customized by countries
- Water quality testing in a sub sample of households (5 households per cluster)

Water quality testing questionnaire

| MICS | | WATER QUALITY TESTING QUESTIONNAIRE | | LOGO |
|---|--|---|-------|------|
| | | Name and year of survey | | |
| WATER QUALITY TESTING INFORMATION PANEL | | | | |
| WQ1. Cluster number: | _____ | WQ2. Household number: | _____ | WQ |
| WQ3. Measurer's name and number: | _____ | WQ4. Interviewer's name and number: | _____ | |
| NAME | _____ | NAME | _____ | |
| WQ5. Day / Month / Year: | _____ / _____ / 20__ | | | |
| WQ6. Check HH10 in the HOUSEHOLD INFORMATION PANEL in the HOUSEHOLD QUESTIONNAIRE: Is the household selected for blank testing? | YES _____ 1 | NO _____ 2 | | |
| WQ7. Name of the respondent to Water Quality Testing Questionnaire: | NAME _____ | | | |
| WQ8. Check HH44. Is permission given to test water? | YES, PERMISSION IS GIVEN _____ 1 =WQ10 | NO, PERMISSION IS NOT GIVEN _____ 2 =WQ31 | | |
| WQ31. Result of Water Quality Testing Questionnaire. | COMPLETED _____ 01 | PERMISSION NOT GIVEN _____ 02 | | |
| Discuss any result not completed with Supervisor. | GLASS OF WATER NOT GIVEN _____ 03 | PARTLY COMPLETED _____ 04 | | |
| | OTHER (specify) _____ 06 | | | |

Point of use

- “Could you please provide me with a glass of the water that members of your household usually drink?”

Point of collection

- “Can you please show me the point of collection of the glass of drinking water so that I can take a sample there as well?”

Water quality testing equipment

Key components:

- A laboratory-grade membrane filtration stand + large syringe
- Dehydrated media plates for the detection of *E. coli*
- Disposable sterile funnels in combination with standard paper membranes (45 μm)
- Alcohol wipes to disinfect the filter support and forceps, and a sterile 1 mL syringe

Water quality results recorded after incubation for 24hrs

In most countries a « body-belt » is used to incubate the samples.

Other incubation options are available:

- Electric incubators
- Phase-change incubator
- Incubation 'vests'

WHO risk levels for faecal contamination of drinking water

| <i>E. coli</i> per 100 mL of water | WHO risk level |
|------------------------------------|----------------|
| <1 | LOW RISK |
| 1-10 | MEDIUM RISK |
| 11-100 | HIGH RISK |
| >100 | VERY HIGH RISK |

LOW RISK
(no *E.coli* detected)

MEDIUM RISK

HIGH RISK

VERY HIGH RISK

Documentation of lessons learned for scaling up water quality testing in household surveys

Water quality testing in household surveys reveals high levels of faecal contamination in many countries

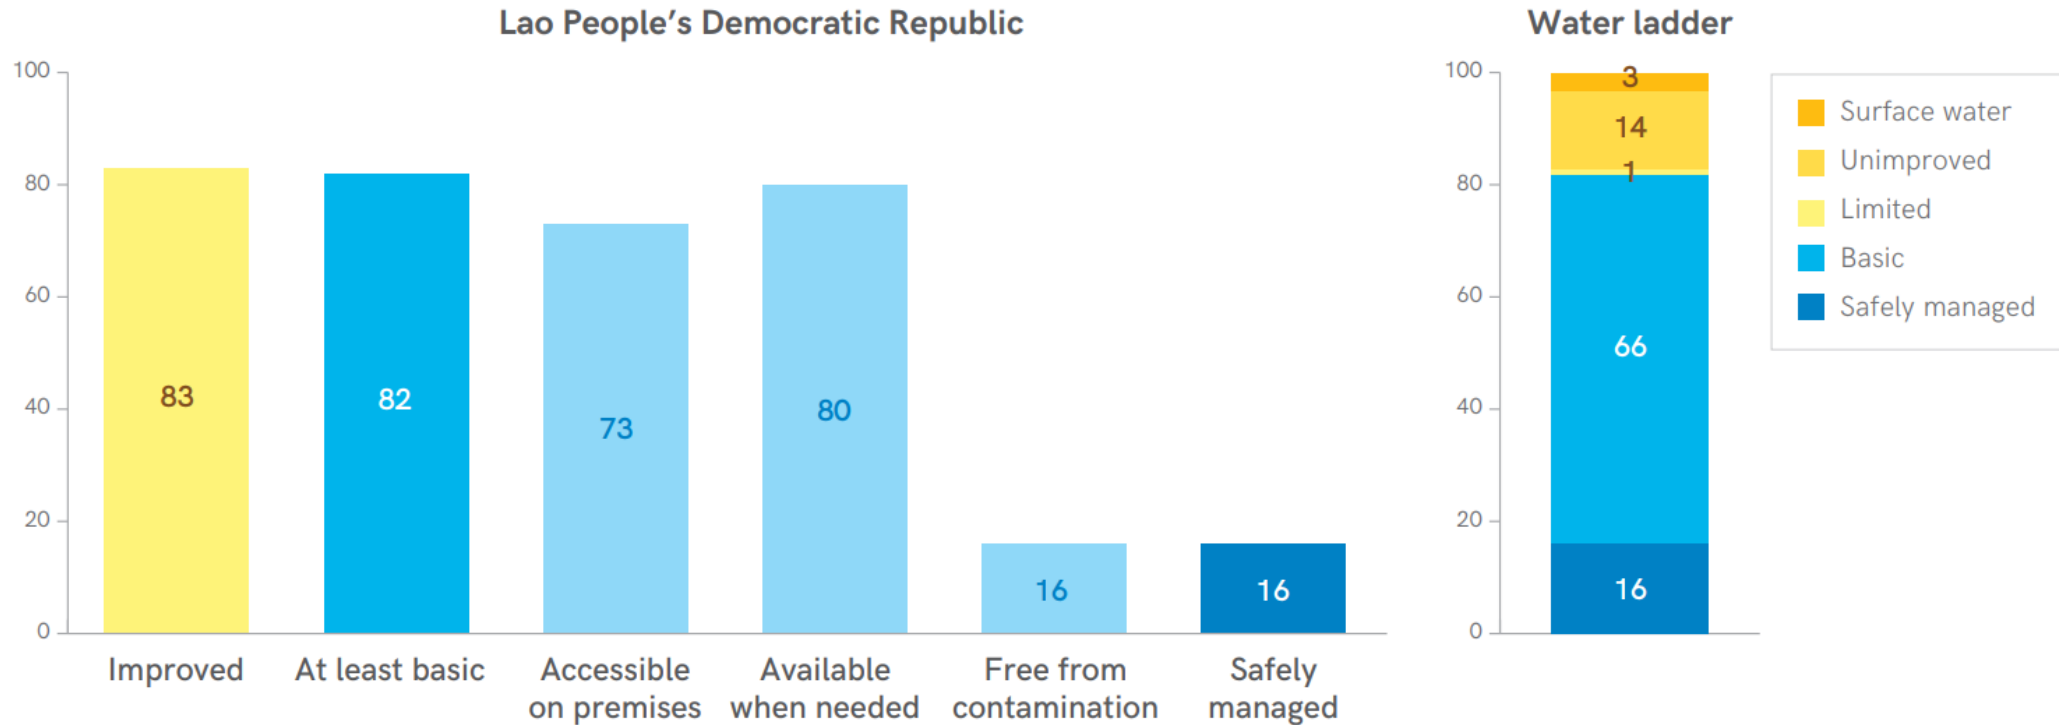

FIGURE 37 Population using drinking water sources by risk of faecal contamination, selected surveys, 2014-2020 (%)

Water quality is often the limiting factor for safely managed drinking water services

Population using drinking water sources meeting SDG criteria for safely managed services, Lao People's Democratic Republic, 2017

Estimates were available for 5 out of 8 SDG regions in 2020

Data availability for 6.1.1 is improving but large gaps still exist

6.1.1 SAFELY MANAGED DRINKING WATER

Madagascar

Drinking Water

- 21% Safely managed status
- 33% Basic status
- 12% Surface water

Sanitation

- 10% Safely managed status
- 2% Basic status
- 42% Open defecation

Hygiene

- 27% Basic status
- 43% Limited status
- 30% No facility status

Year: 2020, Residence: total
