

# Empowering NSOs

## Key lessons from SDGs in UNECE Region

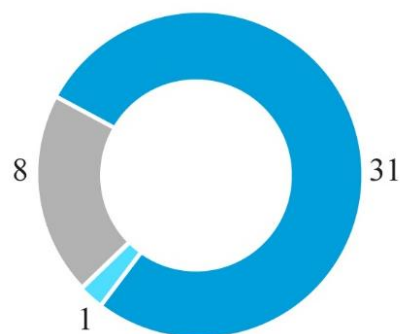

**Renata Bielak**

Director of Statistical Products Department, Statistics Poland  
Co-Chair of UNECE Steering Group on Statistics for SDGs

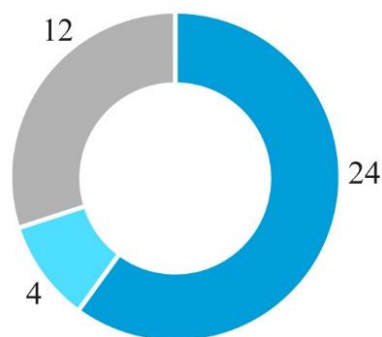

# Global vs National Reporting

Translation of SDGs into national priorities & metrics is easier for NSOs than global reporting

NATIONAL INDICATOR SET  
(n=40 countries)

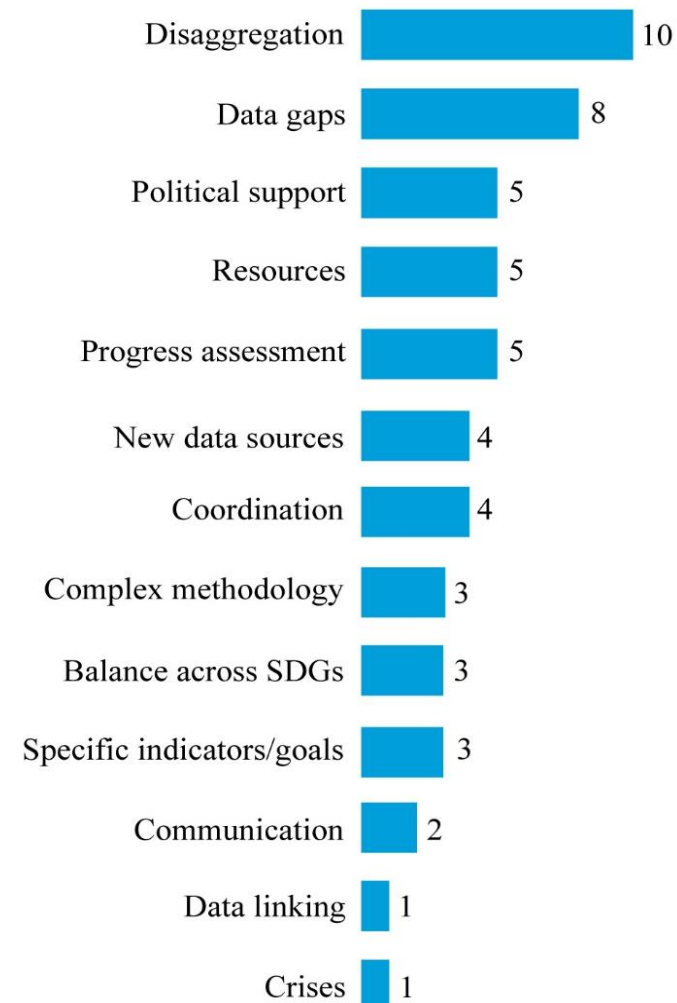

SUBNATIONAL INDICATOR SET  
(n=40 countries)

■ Yes, already in place  
■ Yes, plans to publish  
■ No

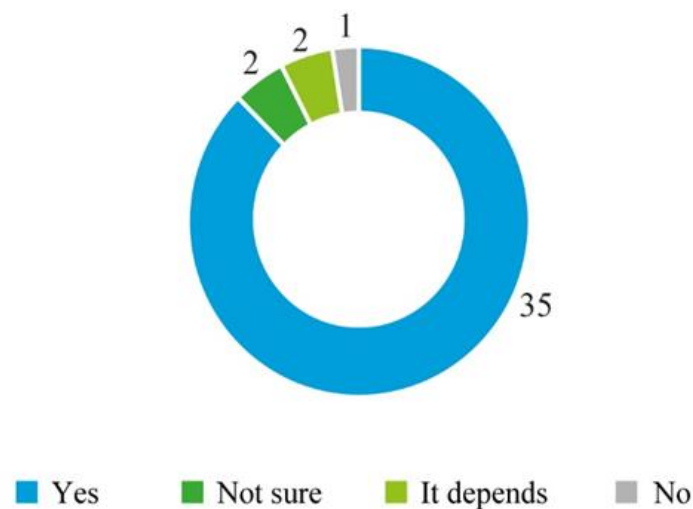

SDG MEASUREMENT CHALLENGES  
(n=37 countries)

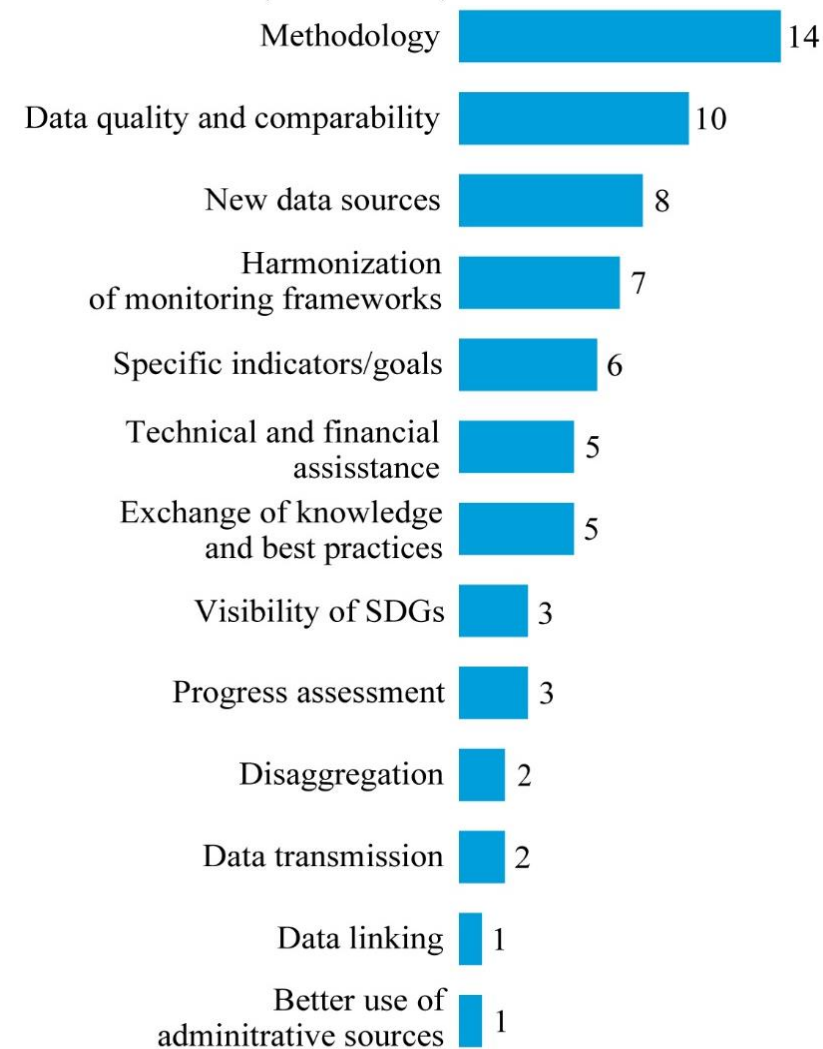

# Need for International Support

Majority of NSOs require further international support in SDG measurement

NEED FOR INTERNATIONAL WORK/SUPPORT IN SDG MEASUREMENT  
(n=40 countries)

NEED FOR INTERNATIONAL WORK/SUPPORT  
IN SDG MEASUREMENT BY AREA  
(n=37 countries)

# Key lessons learned

**MEASUREMENT:** Utilizing national data and integrating SDGs into domestic frameworks improves efficiency, reduces workload, saves resources, and enhances coherence

**COOPERATION:** Collaboration and early dialogue with policymakers are crucial. NSOs need a strong mandate to leverage interest in the next agenda, advocate for measurable targets, and secure resources for data production

**COMMUNICATION:** Communicating SDG indicators led to a better understanding of the role of data, boosting the visibility and relevance of official statistics while increasing demand for statistical insights across various dimensions

**INNOVATION:** Technology is vital but not a standalone solution. Delivering SDG statistics requires a robust data infrastructure, including people, processes, and organizational structures

# Recommendations for NSOs

**MEASUREMENT:** Utilizing Guidelines and Tools developed by the UNECE Steering Group on SDGs can help improve data availability at national level

**COOPERATION:** Meeting data user needs requires collaboration within NSO, across NSS, and partnerships with external data providers, with clear role distribution. Engaging policymakers is crucial for securing support and resources

**COMMUNICATION & INNOVATION:** Enhancing data communication, developing user-tailored statistical products, and innovating for inclusivity are key to maximizing data use and demand

**POST-2030 AGENDA:** Entire statistical community should actively engage in shaping the next global framework. Early involvement strengthens official statistics and enhances their impact on policy success

# Thank you!
