INTRODUCTION

- In January 2012, National Information Technology Agency initiated the creation of Open Data community and portal, theme: “from engaged citizens to more responsive governance”.
- The massive government network dubbed GovNet across the country and data centre which is repositories of government data.
- The GovNet in place, data collection and dissemination by MDAs is easier and spark innovation and development with reuse of data.
- Open Data rely on computing, storage and other web services.
- Effective and efficient utilisation of Ghana Open Data

Ghana Open Data Ecosystem

CONCEPTUAL GHANA OPEN DATA PLATFORM

FEATURES

PROVIDE GOVERNMENTS THE ABILITY TO:

- Publish government data, documents, apps, tools & services from multiple departments within a government
- Build on Web 2.0 open-source technologies with low-cost scalable infrastructure
- Engage Citizens in their open data initiatives for better understanding of their needs
- Provide publicly available application programming interfaces (APIs) and other tools to add external software modules for data visualization, wizards, and other purposes
- Create data-rich community spaces around topics of national priorities and international interest
- Empower end-users to share datasets via social media platforms such as Facebook, LinkedIn, and Twitter
