MULTILINGUAL GLOSSARY OF GEOGRAPHICAL FEATURES
Report of Italy

Submitted by Giovanni ORRU'

MULTILINGUAL GLOSSARY OF GEOGRAPHICAL FEATURES
1st Edition 2004

The document has been produced considering it could be of great help for all the map and geoproduct creators, and their users, since it reports the main generic geographical elements normally present on the Italian maps and their related names in ten languages (therefore it consents a reversible reading). They are given in alphabetical order (Italian) and are described in English for obvious reasons of comprehension.

It has to be stressed, besides, that the said generical terms are usually found in the Italian Geographic Military Institute produced geoinformation (both analogue and digital), abbreviated (the related extended terms are usually reported by the map marginalia). Unfortunately the other national geoinformation does not have the same criteria both as for the abbreviations and the consequent “legenda”.

Another step useful for improving this document could consist in increasing the said terms by those related to local languages (like Sardinian, etc.), since many generic toponyms are expressed with native placenames.

Its realisation has been possible thanks to the appreciated contribution of the RHD experts of France, Germany, Greece, Portugal, Slovenia, Spain, Rumania and Turkey.
