

### Table 5 - Demographic Yearbook 2011

Table 5 presents national estimates of mid-year population for all available years between 2002 and 2011.

Description of variables: Mid-year estimates of the total population are those provided by national statistical offices. They refer to the *de facto* or *de jure* population on 1 July of the reference year. Exceptions to this are footnoted accordingly. The data are presented in thousands, rounded by the Statistics Division of the United Nations Department of Economic and Social Affairs.

For some countries or areas the figures presented in this table and the figures used to calculate rates in subsequent tables are not the same, as these countries have provided a reference population for vital events that is different than the total population.

Unless otherwise indicated, all estimates relate to the population within present geographical boundaries. Major exceptions to this principle are explained in footnotes.

Reliability of data: Reliable mid-year population estimates are those that are based on a complete census (or on a sample survey) and have been adjusted on a basis of a continuous population register or on the balance of births, deaths and migration. Reliable mid-year estimates appear in roman type. Mid-year estimates that are not calculated on this basis are considered less reliable and are shown in *italics*.

Limitations: Statistics on estimates of the mid-year total population are subject to the same qualifications as have been set forth for population statistics in general in section 3 of the Technical Notes.

International comparability of mid-year population estimates is also affected by the fact that some of these estimates refer to the *de jure*, and not the *de facto*, population. These are indicated in the column titled "Code". The difference between the *de facto* and the *de jure* population is discussed in section 3.1.1 of the Technical Notes.

Earlier data: Estimates of mid-year population have been shown in previous issues of the *Demographic Yearbook*. Information on the years and specific topics covered is presented in the Historical Index.
