

Oslo Manual: Guidelines for Collecting and Interpreting Innovation Data (2005 Edition)

The Oslo Manual is the foremost international source of guidelines for the collection and use of data on innovation activities in industry. This third edition, published in October 2005, has been updated to take into account the progress made in understanding the innovation process and its economic impact, and the experience gained from recent rounds of innovation surveys in OECD member and non-member countries. For the first time, the Manual investigates the field of non-technological innovation and the linkages between different innovation types. It also includes an annex on the implementation of innovation surveys in developing countries.
