*1. Big Data for Official Statistics is not a technical-technological issue; it's a political issue—about knowledge, power, and democracy*

*2. Engage with citizens, communities, donors—'revive' and reinvent poverty measurement (for ex.) in the 21<sup>st</sup> century*

*3. reach out, collaborate, drawn lessons—innovate*

## How machine learning can amplify or remove gender stereotypes

AUGUST 6, 2016

by adamkalai

tags: gender bias, word embeddings

TLDR: It's easier to remove gender biases from machine learning algorithms than from people.

## Saving children, one algorithm at a time

By Kathleen Hickey | Jul 26, 2016

The Oklahoma Department of Human Services (DHS) is the latest government entity to take advantage of predictive analytics from non-profit Eckerd Kids to prevent child welfare tragedies.

A screenshot of a mobile browser displaying a New York Times article. The page header shows the New York Times logo and a search icon. Below the header, it identifies the author as an "OP-ED CONTRIBUTOR" and the title as "Make Algorithms Accountable". There are social media sharing icons for Facebook, Twitter, and a general share icon. The main image is a black square with white binary code (0s and 1s) arranged in a grid. A small graphic of a padlock is integrated into the binary code. Below the image, the author's name "By JULIA ANGWIN" and the date "AUGUST 1, 2016" are visible. The name "MATT CHASE" is also present above the author's name.

CYBERSECURITY

# Saving Big Data from Itself

A three-step plan for using data right in an age of government overreach

By Alex "Sandy" Pentland

For the first few decades of its existence, the National Security Agency was a quiet department with one primary job: keeping an eye on the Soviet Union. Its enemy was well defined and monolithic. Its principal tools were phone taps, spy planes and hidden microphones.

After the attacks of September 11, all of that changed. The NSA's chief enemy became a diffuse network of individual terrorists. Anyone in the world could be a legiti-

FORUM

It is time for legislators and judiciary to stop relying on traditional bureaucracies to enforce data rules and rights, and use this new technology to ensure that data stewardship meets the high standard of *a/ways* following the rules and rights specified by our laws. The essential factor that led toward democratisation was broad ownership of the resource, which made it difficult to exert autocratic control. The same seems true for data: to avoid autocratic control, citizens must have effective, direct control of data about themselves.

## Next: Research program with IDB

- In partnership with the city governments of Bogotá, Cartagena, Cali, Medellín, and Santa Marta
- Key (tentative) research questions identified at Media Lab workshop in March 2016:
  - *How will the implementation of the peace agreement affect people's trust in the police?*
  - *How does trust between and within groups and towards institutions affect*
  - *How / why are police records biased?*
