GEOGRAPHIC LOCATION OF SCHOOLS SYSTEM

Bogotá, Colombia

November 2017

www.dane.gov.co
Sicole’s aim is to provide quickly and reliably, detailed and integrated education-related information, from various sources.
It is necessary to share the location.

It is a user-centric, interactive, geographic visualization application, that is available to parents, local decision makers and citizens alike.

http://geoportal.dane.gov.co/sicole/
Therefore, it improves the dissemination of education-related information following the open data guidelines

http://geoportal.dane.gov.co/sicole/
And considering several needs for information including the visualization of integrated data.
Adding value to the analysis of information through different features such as heat maps
For the collection of new information through the app, we will implement a pilot with the Ministry of National Education.
We are incorporating this innovation into the National Statistical System and working with the Ministry of National Education. This is a concrete example of collaboration, from which we expect:

To optimize the use of public resources intended for the generation and dissemination pertaining to statistics of the education sector.

To improve the availability, quality and consistency of a set of statistics concerning the education sector.

To reduce the duplication of efforts, make use of synergies and ensure that available information is accessible and public, ensuring statistical reserve.
