Mainstreaming Disability Data: The Washington Group on Disability Statistics

Jennifer H Madans
Associate Director for Science,
National Center for Health Statistics, USA and
Chair, Washington Group on Disability Statistics
The Washington Group (WG)

- June 2001: UN International Seminar on the Measurement of Disability
- WG established as a City Group under the aegis of the UN Statistical Commission to:
  - address the need for population based measures of disability
  - foster international cooperation in the area of health and disability statistics
  - produce internationally tested measures to monitor status of persons with disability
  - incorporate disability into national statistical systems
The WG is Country driven

- Countries have ownership
  - Representatives include the national statistical offices of 133 countries and territories, 7 international organizations, 6 organizations that represent persons with disabilities
- The **Secretariat** for the WG is located at NCHS
- A **Steering Committee** oversees the WG work plan
- **Workgroups** carries out the work plan with input from all members
- Emphasis on evidence and transparency – **extensive testing of data collection tools in multiple countries**
WG: Workgroups / Leaders

- Workgroup on the Analysis of the Extended Set on Functioning / NCHS
- Workgroup on Child Functioning / NCHS
- Workgroup on Environmental Factors and Participation / NCHS
- Workgroup on Mental Health / South Africa and Italy
- Workgroup on Disability Module for Labor Force Surveys / UCL
# Summary of annual meetings

### Workshops and Expert Consultations:

*in collaboration with UNICEF*
Collaborations

The WG has a long history of collaboration with other international organizations:

- UN Statistics Division
- UN Secretariat for the CRPD
- UNICEF
- UN ESCAP
- World Bank
- ILO
- World Health Organization

as well as many National Statistical Offices and both Non-Governmental and Disabled Person’s Organizations
WG Data Collection Tools: Short Set

Question set that focus on measuring difficulty functioning in universal, basic activities:

- Short set on functioning adopted in 2006
  - Domains of functioning: Seeing, Hearing, Mobility, Cognition, Self-care, Communication
  - Response categories: No difficulty; Some difficulty; A lot of difficulty; Cannot do at all
Testing of the WG SS

• Cognitive testing of the short set questions was carried out in 2006 in fifteen countries:
  Argentina, Brazil, Congo, Egypt, Gambia, India, Kenya, Lesotho, Mauritius, Mexico, Paraguay,
  Philippines, Tanzania, Uganda, Vietnam

• This was followed by field testing in five countries:
  Argentina, Brazil, Gambia, Paraguay, Vietnam
Monitoring the UN CRPD and SDGs through data disaggregation

WG question sets are developed

- to collect internationally comparable data based on the ICF model

- that fulfill the monitoring requirements established by the UN Convention on the Rights of Persons with Disabilities and the Sustainable Development Goals.
Defining a disability continuum and a disability dichotomy

WG questions fulfil two specific data needs:

• to describe disability data as a continuum of functioning based on graded responses to questions in the functional domains, and
• to define a cut-off (or a set of cut-offs) that can be agreed upon internationally in order to disaggregate outcome indicators (e.g. access to education, employment) by disability status

This allows for the calculation of prevalence rates and disaggregation.
Disaggregation requirements

• Need a straightforward and simple way to identify persons with disabilities: the WG questions identify those at greater risk than the general population for limitations in participation.

• Need indicator/outcome data (education, employment, income, health care access) from data collections (census/surveys) that also include the above disability identifier.
Focus on Equalization of Opportunities

- Seeks to identify all those at greater risk than the general population for limitations in participation.
- Disability used as a disaggregation variable.
Mainstreaming disability statistics

- WG questions can be added to any on-going data collections;
  - Can be used in any national or subnational survey (health, labor force, income & expenditure, DHS, MICS etc.)

- Once the WG questions become integrated into core statistical systems – disaggregating outcomes (education, employment etc.) by disability status becomes routine
The Washington Group Short Set...

- has been used in censuses or surveys in over 65 countries
- has been promoted by international aid programs, (DFID/UK and DFAT/Australia), as the means to collect disability data in all programs and projects,
- has been introduced as the means for collecting disability data by the UN Statistical Division (UNSD) and the UN Economic Commission for Europe for the 2020 round of censuses.
- And both the US AID and UNICEF have developed disability modules that will operationalize the WG SS for their Demographic and Health Surveys and Multiple Indicator Cluster Surveys respectively.
WG Data Collection Tools: Extended Set for Adults

- Extended set on functioning adopted 2010
  - expands on the Short Set adding information on upper body functioning, affect, pain and fatigue and adding more questions per domain;

- begins to explore the association between functioning and the environment: use of assistive devices/aids, and functioning with and without assistance
WG Data Collection Tools: Children

Question set that focus on special case of disability and functioning among children and youth:

- WG/UNICEF Module on Child Functioning:
  - includes questions for children 2-4 and 5-17 years

Question set that focus on the environment and participation:

- WG/UNICEF Module on Inclusive Education
  - begins to address the association between environmental barriers and participation
WG Data Collection Tools: Participation

Question sets that focus on the environment and participation:

- Disability module for inclusion on labor force surveys
  - currently under development in collaboration with ILO

- Module on environment & participation
  - under development
  - measuring the environment indirectly through participation in selected activities: family, social and civic domains
Volume on the history and accomplishments of the WG:

International Measurement of Disability:
Purpose, Method and Application
The Work of the Washington Group

B. M. Altman (Editor)
Springer (Publisher)

Publication: June, 2016
The Road Ahead

Capacity building through 2018

- 5-7 regional workshops
- 6-8 implementation and other technical workshops

Development of guidance documents

- Implementation protocols for data collection
- Data analysis
- Dissemination of results
