Overview of Time Use survey

Time Use data are being collected as part of the Canadian General Social Survey program (GSS)

The GSS program runs yearly and collects information on 6 different topics: Time Use, Victimization, Caregiving and care receiving, Families, Social Identity and Giving, Volunteering and Participating. A new survey was run in 2016 on Canadians at work and at home.

Time Use data have been collected every 5 to 7 years since 1986. (1986, 1992, 1998, 2005, 2010 and 2015)
Overview of Time Use survey

• Survey methodology

• A random sample is drawn from a telephone frame containing landline and cell phone numbers in the 10 Canadian provinces.

• Each contacted household rosters every person living there. From the list, one person 15 years old or more is randomly selected to complete the survey.

• During sample creation, a reference day was assigned to each case. The selected respondent must report his/her activities during a 24 hour period for this specific day.

• The retrospective interview must be completed no later than 48 hours from the reference day to enhance recall.
Collection tool and coding

• Time Use survey uses 2 parts

  • A 24 hour recall diary for one selected week day or weekend day

    • In 2015, 2 new questions were added:

      • A subjective wellbeing question was asked twice based on two random hours.

      • A question about the use of technology

  • A set of stylized questions for socio-demographic information

    • New question on texting was added in 2015
Activity codes across cycles

1986 = 84 activity codes
1992 = 153 activity codes
1998 = 163 activity codes
2005 = 167 activity codes
2010 = 264 activity codes
2015 = 64 activity codes (use of a light diary)

New mode of collection could not adapt to past 3-tier activity coding

Up to 2 pre-defined simultaneous activities were collected with each main activity
Activity codes across cycles

14 major indicators

Sleep
Personal care
Eating and drinking
Travel and going from place to place
Paid work activities
Studying or learning
Household chores and maintenance
Parental role, caring and help to others
Shopping for goods and services
Socializing and communicating
Civic, religious and organisational activities
Sports, exercise and outdoor activities
Leisure, hobbies and down time
Other (uncodable or unknown)

CATI collection

Yesterday at 4:00 AM, what were you doing?

How long did you spend on this activity?

Start: 04:00  End: 04:10  Hours: 0  Minutes: 0

Were you doing anything else at the same time?

Who was with you?

On my own  Or  Spouse, partner

- Household child(ren) - less than 15 years old
- Household child(ren) - 15 years or older
- Parents or parents-in-law
- Other household adult(s)
- Other family member(s) from other households
- Friend(s)
- Colleague(s) / classmate(s)
- Other people

Where were you?

During this time period, did you use any information technology device such as a tablet, smartphone, computer or laptop?
EQ Diary instrument

Time Use

General Time Use

The next questions will deal with your use of time for 24-hour period starting at 4:00 in the morning.

You will be asked to provide details of your activities over a 24-hour period on a specific day. Please report all activities that lasted at least 10 minutes, including activities such as travelling from place to place.

You will be asked to list the different activities done during this past Monday.

Qualitative analysis of the 2015 pilot survey

CATI VS EQ Mode effect??
Qualitative analysis pilot survey

CATI

2 weeks of collection or 400 respondents.
(July 7\textsuperscript{th} to 20\textsuperscript{th} 2014)
389 completed cases

EQ

1400 e-mails sent at the rate of 200 per day for seven days. Up to 3 reminders were sent.
(October 14\textsuperscript{th} to November 16\textsuperscript{th} 2014)
473 completed cases

Qualitative results of the pilot survey

Education / Work

CATI respondents

Education
➢ 84% had at least a high school diploma
➢ 31% had a University degree or more

Work
➢ 49% were working. Among the workers, 49% were women
➢ 3 times more women were still working in the age group 65+

EQ respondents

Education
➢ 97% had at least a high school diploma
➢ 47% had a University degree or more

Work
➢ 54% were working. Among the workers, women represented 49%
➢ almost 3 times more men were still working in the age group 65+

Qualitative results of the pilot survey conclusion

Respondents have different characteristics according to the mode.
The number of provided activities are similar between modes.
Interviewer effect could bias result of the subjective well-being scale.
2015 Collection Issues

- Telephone frame, no pre-selected respondent
  - Priority rules applied
  - Rostering process limited EQ

- Collection started with CATI only
  - Migration to a new EQ system version

- EQ acceptance ≈ disguised refusal
  - Additional script added
Moving forward

• Time Use survey is scheduled for collection in 2021. It will be the first survey to use new innovative tool for collection

• Content consultation should start in Fall 2019

• Start of collection aimed for January 2021
