

GENDER STATISTICS – IT IS TIME TO CARE

5 December 2024,18th Interagency and Expert Group on Gender Statistics

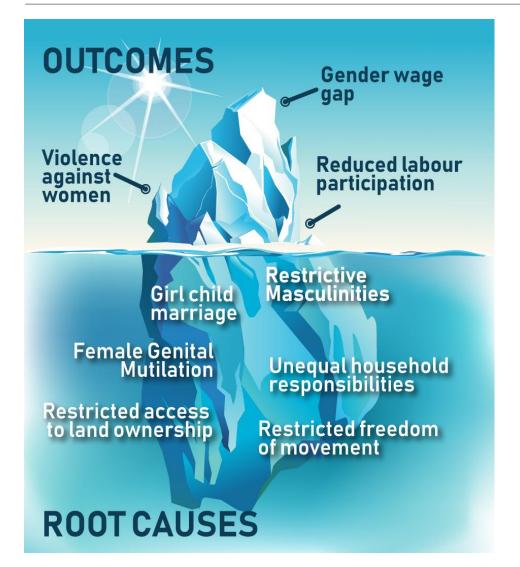

Hyeshin Park

Economist and Gender Programme Co-ordinator OECD Development Centre

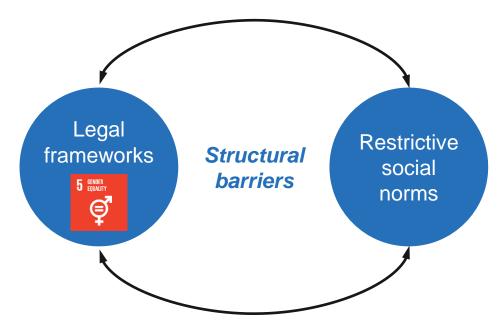

Social institutions matter for gender equality and development

The Social Institutions and Gender Index (SIGI) is the official source for monitoring SDG Indicator 5.1.1

The SIGI 2023 covers 179 countries.

Care is framed as a feminine matter

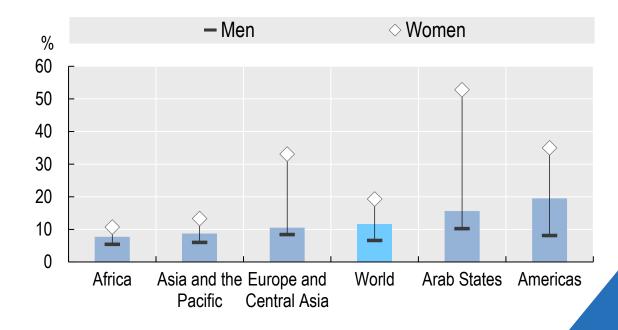

99% of countries mandate maternity leave

68% of countries mandate paternity leave

Women outnumber men in paid care work

Care employment as proportion of total employment

Spotlight: care preferences in Southeast Asia

Social norms and preferences frame care as a private and feminine matter

Care systems rely on women's unpaid care work and a small and informal care sector

Incentives to develop formal care services are **limited** and public spending **low**

- Demographic shifts and economic changes increase care demands
- Norms frame care as a feminine responsibility, limiting formal services
- Transforming these norms can lead to shared care responsibilities and public investment

Gender-disaggregated data on care remain scarce

Almost **50%** of countries worldwide have **no** data on unpaid care and domestic work

Data gaps on social norms that underpin paid and unpaid care provision

Limited knowledge on care preferences and expectations by care receivers and providers

Building strong care economies requires better data on care

Filling the gaps: data collection in Southeast Asia

Qualitative data collection

Deep dive in two countries

FGDs and KIIs with care receivers and care providers

- Gender preferences in care provision
- Reasons for not using formal care services
- Required conditions for use of formal care services
- Challenges care providers face
- Promising care provision models
- Role of private and public sector in care provision

Quantitative data collection

Add-on modules to existing surveys (tbc) General population

- Attitudes on care provision: who should be responsible; who is most fit
- Unpaid care provision in practice
- Use of formal/paid care services

Thank you!
