Nota: Los coeficientes de variación estimados -CVE- permiten evaluar la precisión de las estimaciones. Se pueden considerar excelentes si están entre 0 y 5%, buenos si están entre 5% y 10%, aceptables entre 10% y 15%. Cuando un CVE supera el 15% se recomienda usar la estimación con fines descriptivos (tendencia no niveles) ya que esta no es muy precisa. Li: Límite inferior. Ls: Límite Superior

La variación en el total de personas según cada desagregación se deben a la aproximación en decimales.
