## 6. Primary data source (base data)

### 6.1 Type of base data:

- (1) Continuous population register
- (2) Complete census taken [ ] (date)

Population census: 1959 - as of January 15, 1959; 1970- as of January 15, 1970; 1979 - as of January 17, 1979; 1989 - as of January 12, 1989; 2002 - as of December 5 2001.

- i) population actually enumerated
- ii) population adjusted to take account of [ ] % underenumeration
- (3) Sample survey taken [ ] (date)
- (4) Partial census taken or partial registration [ ] (date)

Please describe method:

- (5) Non-censal count of [ ] (date)

Please describe method:

- (6) Conjectural estimate derived by means other than counting

Please describe method:

**6.2 Territorial coverage of base data, please specify:  
UKRAINE**

**6.3 Type of population count employed in base data:**

- present population (de facto)
- usually resident population
- registered population
- other, please specify:

Resident population is the population that regularly resides at the census moment on the certain territory including those temporarily absent if their absence at the place of residence has not exceeded 12 months.

**7. Method of producing the reported population estimates**

**7.1 Total population**

Estimates of total population of a country may be constructed using several methods. Please indicate by a check mark the method used in constructing the reported population estimates.

**7.1.1 Method of time adjustment**

- (1) Population estimates are sourced annually from a population register
- (2) Applying statistics of births and deaths (natural increase), and migration
- (i) Registered vital statistics
- (ii) Vital statistics adjusted for incompleteness
- (3) Applying statistics of births and deaths (natural increase), but no account taken of migration
- (i) Registered vital statistics
- (ii) Vital statistics adjusted for incompleteness
- (4) Applying an assumed rate of increase, based on:

- (i) Assumption with respect to mortality, fertility, migration
- (ii) Assumption with respect to mortality, fertility, but no account taken of migration
- (iii) Other assumed rate

Please provide the rate used, and describe how it was obtained:

- (5) No time adjustment (base figure held constant)
- (6) Other; please explain:

## 7.2 Population by age and sex

Estimates of population by age and sex are assumed to be constructed on the same base data as are the total population estimates. However, certain additional factors may affect age distributions estimated from census enumerations or from sample surveys. Please indicate below the adjustment(s) made in the basic age distribution used to construct the reported population estimates by age and sex.

### 7.2.1 Adjustments in base data

- (1) No adjustments – the calculations are based on population actually enumerated at various ages or estimated from survey results.
- (2) Enumerated population or population estimated from survey results adjusted to take account of under enumeration at various ages. Please describe as necessary the methods of adjustment.
- (3) Base age distribution is "smoothed", i.e., adjusted to remove effects of digit preference in age reporting. Please describe as necessary the methods of smoothing.

### 7.2.2 Method of time adjustment

Please indicate below the method used in constructing the age-sex distribution of the reported population estimates by age and sex.

- (1) Population estimates by age and sex are sourced annually from a population register
- (2) Applying actual or assumed natural increase and migration
- (3) Applying actual or assumed natural increase alone
- (4) Distributing the total estimate according to percentage of population in each age-sex group at time of census of sample survey
- (5) Use of the cohort-components method to produce population estimates by age and sex

- (6) Innovative methods that use registers and administrative data. Please describe as necessary:
- (7) By other means, please describe:

### 7.2.3 Disposition of unknown age

Please indicate below whether, in the preparation of the population estimates by age and sex:

- (1) An age has been assigned to persons for whom age did not appear in the census or sample survey.
- (2) Frequency in unknown age category has been distributed proportionately among known ages.
- (3) The frequency of unknown age appearing in the census or survey was zero.
- (4) Other treatment for unknown age category.

### 7.3 Urban and rural population, and the population of cities

Please indicate below the method used in making intercensal or postcensal estimates of urban, rural, and of city population.

	Urban/rural population	City population
(1) Continuous population registers	<input type="checkbox"/>	<input type="checkbox"/>
(2) Surveys, other than a census	<input type="checkbox"/>	<input type="checkbox"/>
(3) Extrapolation of percentage	<input type="checkbox"/>	<input type="checkbox"/>
(4) Observed rate of growth, assumed to continue	<input type="checkbox"/>	<input type="checkbox"/>
(5) <u>By other means; please describe:</u>	<input type="checkbox"/>	<input type="checkbox"/>

Urban population is the population that resides in the cities and urban-type settlements. Rural population is the population that resides in the villages and settlements.

## 8. Bibliography of Demographic Statistics
