

DESCRIPTION OF POPULATION ESTIMATES FOR LATEST YEAR
GIVEN IN THIS QUESTIONNAIRE

To insure accuracy and completeness of the description of national population estimates on file in the Statistics Division of the United Nations, please provide the method of their construction. Please enter a check mark (X) in the box following the words which best describe the estimates in terms of these questions.

1. COVERAGE OF DATA

DE FACTO ESTIMATES ARE NOT AVAILABLE FOR JAMAICA ALL INFORMATION GIVEN RELATES TO THE DE JURE POPULATION

In conformity with definition given in the general instructions (see sheet titled "Instructions"), estimates should relate to the de facto population. In order to clarify the exact composition of the population, please indicate in the following check box with an "X" the exact disposition of each group listed. Specify the years to which the description refers to:

Population Group	Estimated total population for year 2005		
	Included	Not included	Not applicable
(a) Nomads			X
(b) Persons living in remote areas	X		
(c) Military, naval and diplomatic personnel and located outside the country	X		
(d) Merchant seamen and fishermen resident in the country but at sea at the time of the census (including place of residence other than their quarters aboard ship).	X		
(e) Civilian residents temporarily in and workers	X		
(f) Civilian residents who cross a frontier daily to work in another country			X
(g) Civilian residents other than those in (c), (e), and (f) working in another country		X	
(h) Civilian residents other than those in (c)-(g), temporarily absent from the country	X		
(i) Foreign military, naval and diplomatic personnel and their families located in the country		X	
(j) Civilian aliens temporarily in the country as seasonal workers			X
(k) Civilian aliens who cross a frontier daily to work another country			X
(l) Civilian aliens other than those in (i), (j), and (k) working in another country		X	
(m) Civilian aliens other than those in (i)-(l), temporarily in country		X	
(n) Transients on ships in harbour at the time of	X		

2. METHOD OF ESTIMATION

a) Total population

Estimates of total population for a country as a whole may be constructed by a variety of means. Please indicate by a check mark [X] the method used in constructing the latest population estimate for (date) 2005, indicating the source of "base data" and the "method of time adjustment". If there are publications readily available with the description of methods used, please include them in reply to this questionnaire.

Base Data

- 1- Continuous population register []
- 2- Complete census taken (date) September 10, 2001 []
 - i) population actually enumerated []
 - ii) population adjusted to take account of 20 % underenumeration
- 3- Sample survey taken (date) []
- 4- Partial census taken or partial registration (date) (Please describe)
- 5- Non-censal count of (date) []

(describe method) _____

6- Conjunctual estimate derived by means other than counting []
(describe method) _____

Method of time adjustment

1- Base data secured annually by population register []

2- Applying statistics of births and deaths (natural increase), and migration

- i) Registered vital statistics []
- ii) Vital statistics adjusted for incompleteness []

3- Applying statistics of births and deaths (natural increase), but no account taken of migration

- i) Registered vital statistics []
- ii) Vital statistics adjusted for incompleteness [x]

4- Extrapolating mathematically from censuses taken (dates) _____, _____,
and _____. Please give formula: _____

DEMOGRAPHIC YEARBOOK

Demographic Statistics Section - Questionnaire on Population Estimates

5- Applying an assumed rate of increase, not derived by mathematical extrapolation or interpolation but based on:

- i) Assumption with respect to mortality, fertility, migration []
- ii) Assumption with respect to mortality, fertility, but no account taken of migration []
- iii) Other assumed rate []

If (i), (ii) or (iii) is checked, please give rate used, and describe how obtained: _____

6- No time adjustment (base figure held constant) []

7- Other (explain) _____

b) Population by age and sex

Estimates of population according to age and sex are assumed to be constructed on the same base data as are the total estimates. However, certain additional factors may affect age distributions estimated from census enumerations or from sample surveys. Please indicate below the adjustment(s) made in the basic age distribution used to construct estimates shown in Tables 2 and 4.

Adjustments in base

- 1) None-based on population actually enumerated at various ages or estimated from survey results []
- 2) Enumerated population or population estimated from survey results adjusted to take account of underenumeration at various age [x]
- 3) Base age distribution "smoothed", i.e., adjusted to remove effects of digit preference in age reporting []

Method of time adjustment

Distribution of estimated population according to age and sex may also be made by same methods as used to obtain the projection of the total figure, or it may be derived by distributing the estimate according to the percentage of population in each age-sex group at time of census. Please indicate below the method used in constructing the age-sex distribution of the latest estimate shown in Table 2.

- 1- Applying actual or assumed natural increase and migration [x]
- 2- Applying actual or assumed natural increase alone []
- 3- Distributing the total estimate according to percentage of population in each age-sex group at time of census of sample survey []
- 4- By other means (describe) _____
