</table>

Base denominator for this estimate is:

- (a) Enumerated population  
- (b) Estimated "complete" population  
- (c) Don't know

Method(s) used in estimating completeness:

- (a) Post Enumeration Survey (PES)  
- Date conducted:  
- Size of sample (specify unit: ):
  - For total area:  
  - For urban areas:  

4. Definition of urban/rural

The definition of urban areas for this census is:

1970 definition

The criteria in identifying an urban place being adopted up to the present are given as the 1970 present definition:

D. Housing census characteristics

1. Housing information

What definition did you apply in this census for housing unit?

A housing unit is a structurally separate and independent place of abode which, by the way it has been constructed, converted, or arranged, is intended for habitation by one or more households.

What definition did you apply in this census for conventional dwelling?

We only have type of building/housing unit in our census.

A building is defined as any structure built, designed or intended for the enclosure, shelter or protection of any person, animal or property. It consists of one or more rooms and/or other spaces, covered by a roof, and usually enclosed within external walls or with common dividing walls with adjacent buildings, which usually extend from the foundation to the roof.

Residential buildings are buildings by which, by the way they have been designed or constructed, are intended for abode such as single houses, multi-unit residential buildings, and others.

The types of conventional dwellings included were the following:

Single House – This is an independent structure intended for one household, separated by an open space or walls from all other structures. It includes the so-called “nipa hut”, or a small house that is built as a more or less permanent housing unit, or a “barong-barong” which is made of salvaged/makeshift/improvised materials.

Duplex – This is a structure intended for two households, with complete living facilities for each. It is divided vertically or horizontally into two separate housing units which are usually identical.

Multi-Unit Residential (three or more units) – This is a building intended for residential use only, consisting of three or more housing units. These houses may consist of one or more storeys in a row of three or more housing units, separated from each other by walls extending from the ground to the roof, or a building having floors to accommodate three or more housing units.

Commercial/Industrial/Agricultural – These refer to buildings which are not intended mainly for human habitation but are used as living quarters of households at the time of census.
A commercial building is a building built for transacting business or for rendering professional services, such as a store, office, warehouse, rice mill, and others.

An industrial building is a building built for processing, assembling, fabricating, finishing, and manufacturing or packaging operations, such as a factory or a plant.

An agricultural building is any structure built for agricultural purposes, such as a barn, stable, poultry house, granary, and others.

Institutional Living Quarters – Hotels, motels, inns, boarding houses, dormitories, and pension or lodging houses fall into this category. This group comprises permanent structures which provide lodging and/or meals on fee basis. Institutional buildings are buildings intended for persons confined to receive medical, charitable or other care/treatment such as hospitals and orphanages, for persons detained such as jails and penal colonies, and other buildings like convents, school dormitories, and others.

Also included in this category are camps which are defined sets of premises originally intended for the temporary accommodation of persons with common activities or interests like military camps, and other camps established for the housing of workers in mining, agriculture, public works, or other types of enterprises.

Other Housing Units – These refer to living quarters which are neither intended for human habitation nor located in permanent buildings but are nevertheless, used as living quarters at the time of the census. Caves, old railroad cars, other natural shelters, and mobile housing units such as trailers, barges, carts, boats, and others, fall into this category.

Are vacant units included in the enumerated conventional dwellings?

Yes

What definition did you apply in this census for room?

A portion of a building (a room or a group of rooms) qualifies as a separate housing unit if it meets both the following requirements:

1. Separateness – the portion of a building must have facilities for sleeping, preparing and taking meals, and its occupants must be isolated from other households in the building by means of walls or permanent partitions; and
2. **Direct access** – the portion of the building can be accessed directly from the outside of the building, that is, the occupants can come in to the portion of the building without passing through anybody else’s premises from the street, pathway, alley, callejon, road, yard, catwalk, public or communal staircase, passage, gallery, grounds, or through a common hall.

2. **Definition of cities**  
   (as referred to in the Housing Census Questionnaire: City Data)

   General definition of a city in the reporting country for this census
   
   City 1 (Capital City) – Territory refers to:
   
   City 2 – Territory refers to:
   
   City 3 – Territory refers to:
   
   City 4 – Territory refers to:
