In order that the description of national population series on file in the Statistical Division of the United Nations may be as up to date as possible, it is desirable to provide for confirmation or revision of the method of their construction. The questions below relate to coverage of data and method of estimation. It is requested that a "X" be made in the field following the words which best describe the estimates in terms of these questions.

1. COVERAGE OF DATA
The mid-year population of Hong Kong before 1996 was compiled using the "extended de facto" approach. It includes Hong Kong Permanent and Non-permanent Residents and visitors who are in Hong Kong at the reference time-point. Hong Kong Permanent Residents temporarily away to the mainland of China and Macau are also included. Since August 2000, the "resident population" approach has been adopted in place of the "extended de facto" approach for compiling population estimates of the Hong Kong Population. With the availability of the 2001 Population Census results, the population estimates since mid-1996 have been updated.

The population estimate compiled under the "resident population" approach is referred to as the "Hong Kong Resident Population". The "Hong Kong Resident Population" comprises "Usual Residents" and "Mobile Residents". "Usual Residents" refer to two categories of people: (1) Hong Kong Permanent Residents who have stayed in Hong Kong for at least three months during the six months before or for at least three months during the six months after the reference time-point, regardless of whether they are in Hong Kong or not at the reference time-point; and (2) Hong Kong Non-permanent Residents who are in Hong Kong at the reference time-point. As for "Mobile Residents", they are Hong Kong Permanent Residents who have stayed in Hong Kong for at least one month but less than three months during the six months before or for at least one month but less than three months during the six months after the reference time-point, regardless of whether they are in Hong Kong or not at the reference time-point. Under the new approach, visitors are not included in the Hong Kong Population.

In order to clarify the exact composition of the population, please indicate in the following check box the exact disposition of each group listed, using "IN" for included; "EX" for excluded. Specify years to which description refers.

(m) Civilian aliens other than those in (i)-(l), temporarily in the country ....................

(n) Transients on ships in harbour at the time of the census ...............................
6. Conjectural estimate derived by means other than counting (describe method)

METHOD OF TIME ADJUSTMENT
1. Base data secured annually by population register
2. Applying statistics of births and deaths (natural increase), and migration:
   i. registered vital statistics
   ii. vital statistics adjusted for incompleteness
3. Applying statistics of births and deaths (natural increase), but no account taken of migration:
   i. registered vital statistics
   ii. vital statistics adjusted for incompleteness
4. Extrapolating mathematically from censuses taken (dates):
   Please give formula:
5. Applying an assumed rate of increase, not derived by mathematical extrapolation or interpolation but based on:
   i. assumption with respect to mortality, fertility and migration
   ii. assumption with respect to mortality, fertility but no account taken of migration
   iii. other assumed rate
   If (i), (ii) or (iii) is checked, please give rate used and describe how obtained:
6. No time adjustment (base figure held constant)
7. Other (explain):

B2. POPULATION BY AGE AND SEX

Estimates of population according to age and sex are assumed to be constructed on the same base data as are the total estimates. However certain additional factors may be involved in the case of those age distributions estimated from the census enumerations or from sample surveys. Please indicate below the adjustment(s) made in the basic age distribution used to construct estimates shown in Table PE-2 and 4.

ADJUSTMENTS IN BASE

i. None - based on population actually enumerated at various ages or estimated from survey results
ii. Enumerated population or population estimated from survey results adjusted to take account of underenumeration at various ages
iii. Base age distribution "smoothed", i.e., adjusted to remove effects of digit preference in age reporting
METHOD OF TIME ADJUSTMENT

Distribution of estimated population according to age and sex may also be made by same methods as used to obtain the projection of the total figure, or it may be derived by distributing the estimate according to the percentage of population in each age-sex group at the time of the census. Please indicate below the method used in constructing the age-sex distribution of the latest estimate shown in Table PE-2.

1. Applying actual or assumed natural increase and migration [ X ]
2. Applying actual or assumed natural increase alone [ ]
3. Distributing the total estimate according to percentage of population in each age-sex group at time of census of sample survey [ ]
4. By other means (describe below) [ ]

DISPOSITION OF UNKNOWN AGE

If frequency in unknown age category of table PE-2 and 4 is zero please indicate below whether in the preparation of the estimates:

1. An age has been assigned to persons for whom age did not appear in the census or sample survey [ ]
2. Frequency in unknown age category has been distributed proportionately among known ages [ X ]
3. The frequency of unknown age appearing the census or survey was zero [ ]

C2. URBAN AND RURAL POPULATION AND THE POPULATION OF CITIES

Post-censal estimates of the urban and rural population, or the population of individual cities can be made in various ways. In some countries continuous population registers permit the up-dating of local population estimates according to the registered balances of births, deaths, and changes of residence. In some countries, perhaps, periodic surveys permit the up-dating of urban or city population estimates. In some countries, in relation to post-censal estimates of the total population, estimates of urban, or city population may be determined by an extrapolation of the percentage or urban in total, or city in urban, population. In some countries, urban and city population may be determined on the basis of rates of growth of urban or city population observed over a past period, by assuming such rates of growth to continue. Other methods are also possible. Please indicate below the method used in making post-censal estimates of urban and rural, or city population.

1. Population registers

<table>
<thead>
<tr>

<th>City population</th>
</tr>
</thead>
<tbody>
<tr>
<td>[ ]</td>
<td>[ ]</td>
</tr>
</tbody>
</table>
2. Surveys, other than a census [ ] [ ]
3. Extrapolation of percentage [ ] [ ]
4. Observed rate of growth, assumed to continue [ ] [ ]
5. By other means (describe)

BIBLIOGRAPHY OF DEMOGRAPHIC STATISTICS

In order to bring up to date the bibliographical information you kindly supplied with last year's questionnaire, please list below publication which have become available since that time or are to be issued in the near future which contain results of your latest population census or survey, and current statistics on population estimates, vital statistics and internation migration.

This information is being requested for the purpose of compiling and maintaining a current bibliography of demographic statistics. The citations should, therefore, be in a form suitable for reference purposes, i.e., the TITLE, ISSUING AGENCY or AUTHOR, PLACE, DATE OF PUBLICATION and NUMBER OF PAGES should be given.

Example:

-------------
(1) Hong Kong Monthly Digest of Statistics, February 2002 Edition
Census and Statistics Department, Hong Kong SAR, China, 2002, 207pp.
(2) Hong Kong Annual Digest of Statistics, 2001 Edition
Census and Statistics Department, Hong Kong SAR, China, 2001, 405pp.
(3) Hong Kong Social and Economic Trends, 2001 Edition
Census and Statistics Department, Hong Kong SAR, China, 224pp.
(4) 2001 Population Census - Summary Results
Census and Statistics Department, Hong Kong SAR, China, 117pp.
(5) 2001 Population Census - Basic Tables for District Council Districts
Census and Statistics Department, Hong Kong SAR, China, 2002, 115pp.
(6) 2001 Population Census - Basic Tables for Tertiary Planning Units
Census and Statistics Department, Hong Kong SAR, China, 2002, 483pp.
(7) 2001 Population Census - Basic Tables for Constituency Areas : Hong Kong Island
Census and Statistics Department, Hong Kong SAR, China, 2002, 207pp.
(8) 2001 Population Census - Basic Tables for Constituency Areas : Kowloon
Census and Statistics Department, Hong Kong SAR, China, 2002, 309pp.
(9) 2001 Population Census - Basic Tables for Constituency Areas : New Territories
Census and Statistics Department, Hong Kong SAR, China, 2002, 471pp.
