Demographic Statistics Section - Questionnaire on Population Estimates

Description of Population Estimates for Latest Year

In order that the description of national population estimates on file in the Statistics Division of the United Nations is accurate and complete, it is desirable to provide for confirmation or revision of the method of their construction. The questions below relate to coverage of data and method of estimation. It is required that a check mark (X) be made in the box following the words which best describe the estimates in terms of these questions.

1. Coverage of Data

In conformity with definition given on page 2, estimates should relate to de facto population. In order to clarify the exact composition of the population, please indicate in the following check box the exact disposition of each group listed, using "IN" for included; "EX" for excluded. Specify years to which description refers.

<table>
<thead>
<tr>
<th>Population Group</th>
<th>Estimated total population for year 2002</th>
</tr>
</thead>
<tbody>
<tr>
<td>(a) Nomads.</td>
<td></td>
</tr>
<tr>
<td>(b) Persons living in remote areas.</td>
<td></td>
</tr>
<tr>
<td>(c) Military, naval and diplomatic personnel and their families located outside the country.</td>
<td></td>
</tr>
<tr>
<td>(d) Merchant seamen and fishermen resident in the country but at sea at the time of the census (including those who have no place of residence other than their quarters aboard ship).</td>
<td></td>
</tr>
<tr>
<td>(e) Civilian residents temporarily in another country as seasonal workers.</td>
<td></td>
</tr>
<tr>
<td>(f) Civilian residents who cross a frontier daily to work in another country.</td>
<td></td>
</tr>
<tr>
<td>(g) Civilian residents other than those in (c), (e), and (f) working in another country.</td>
<td></td>
</tr>
<tr>
<td>(h) Civilian residents other than those in (c)-(g), temporarily absent from the country.</td>
<td></td>
</tr>
<tr>
<td>(i) Foreign military, naval and diplomatic personnel and their families located in the country.</td>

2. Method of Estimation

a) Total Population

Estimates of total population for a country as a whole may be constructed by a variety of means. Please indicate by a check mark (X) the method used in constructing the latest population estimate for (date) JULY 2001 , indicating the source of "base data" and the "method of time adjustment". If there are publications readily available with the description of methods used, please include these in reply to this questionnaire.

Base Data

1- Continuous population register [ ]
2- Complete census taken (date) [ ]
   i) population actually enumerated [ ]
   ii) population adjusted to take account of ______ % underenumeration
3- Sample survey taken (date) [ ]
4- Partial census taken or partial registration (date) [ ]
   (Please describe)
5- Non-censal count of (date) [X]
   (describe method)

The estimates as of midyear population for year N is the mean about the population registered at 1st January year N and the population registered at 1st January year N+1

6- Conjectural estimate derived by means other than counting [ ]
   (describe method)

Method of time adjustment

1- Base data secured annually by population register [ ]
2- Applying statistics of births and deaths (natural increase), and migration
   i) Registered vital statistics [ ]
   ii) Vital statistics adjusted for incompleteness [ ]
3- Applying statistics of births and deaths (natural increase), but no account taken of migration
   i) Registered vital statistics [ ]
   ii) Vital statistics adjusted for incompleteness [ ]
4- Extrapolating mathematically from censuses taken (date) [ ]
   and [ ] Please give formula:

REPORTING COUNTRY: Andorra
REPORTING YEAR: 2002

   and [ ] Please give formula:
In order to bring up to date the bibliographical information you kindly supplied with last year's questionnaire, please list below publication which

- Extrapolation of percentage.............. [ ] [ ]
- Surveys, other than a census............. [ ] [ ]
- Population registers..................... [ ] [ ]

Population

__________________    _______________
Urban                City

and rural, or of city population.

In some countries, urban and city population may be determined on the basis of rates of growth of urban population estimates according to registered balances of births, deaths, and changes of residence. In some countries, perhaps, periodic surveys permit the updating of urban or city population estimates. In some countries, in relation to post-censal estimates of total population, estimates of urban, or city population may be determined by an extrapolation of the percentage of urban in total, or city in urban, population. In some cases, urban and city population may be determined on the basis of rates of growth of urban or city, population observed over a past period, by assuming such rates of growth to continue. Other methods are also possible. Please indicate below the method used in making post-censal estimates of urban and rural, or of city population.

\[
\begin{array}{|c|c|}
\hline
\text{Urban} & \text{City} \\
\text{population} & \text{population} \\
\hline
1- Population registers..................... [ ] & [ ] \\
2- Surveys, other than a census............. [ ] & [ ] \\
3- Extrapolation of percentage.............. [ ] & [ ] \\
4- Observed rate of growth, assumed to continue.. [ ] & [ ] \\
5- By other means (describe) \\
\hline
\end{array}
\]

In some countries, in relation to post-censal estimates of total population, estimates of urban, or city population may be determined by an extrapolation of the percentage of urban in total, or city in urban, population. Adjustments in base

\begin{enumerate}
\item None-based on population actually enumerated at various ages or estimated from survey results [ ]
\item Enumerated population or population estimated from survey results adjusted to take account of underenumeration at various ages [ ]
\item Base age distribution “smoothed”, i.e., adjusted to remove effects of digit preference in age reporting [ ]
\end{enumerate}

Method of time adjustment

Distribution of estimated population according to age and sex may also be made by same methods as used to obtain the projection of the total figure, or it may be derived by distributing the estimate according to the percentage of population in each age-sex group at time of census. Please indicate below the method used in constructing the age-sex distribution of the latest estimate shown in Table 2.

\begin{enumerate}
\item Applying actual or assumed natural increase and migration [ ]
\item Applying actual or assumed natural increase alone [ ]
\item Distributing the total estimate according to percentage of population in each age-sex group at time of census or sample survey [ ]
\item By other means (describe) [ ]
\end{enumerate}
have become available since that time or are to be issued in the near future which contain results of your latest population census or survey, and current statistics on population estimates, vital statistics and international migration.

This information is being requested for the purpose of compiling and maintaining a current bibliography of demographic statistics. The citations should, therefore, be in a form suitable for reference purposes, that is, the title, issuing agency or author, place, date of publication and number of pages should be given.
