In order that the description of national population series on file				
in the Statistical Division of the United Nations maybe as up to date				
as possible, it is desirable to provide for confirmation or revision				
of the method of their construction. The questions below relate to				
coverage of data and method of estimation. It is requested that a "X" be				
made in the field following the words which best describe the estimates				
in terms of these questions.				
1. COVERAGE OF DATA				
In conformity with definition given on the instructions,estimates should				
relate to DE FACTO population. In order to clarify the exact composition				
please indicate in the following check box the exact disposition of each				
group listed, using "IN" for included; "EX" for excluded. Specify years				
to which description refers.				
DODULATION ODOLID		 ESTIMATED TOTAL FOR:		
POPULATION GROUP	-	ESTIMATED TOTAL FOR:	0004	
			2001	
	1	T	===	ì
(a) Nomads	-		EX	
(b) Persons living in remote areas	-		IN IN	
(c) Military,naval and diplomatic personnel and their families located outside the country			IIN	
(d) Merchant seamen and fishermen resident in the	-		IN	
country but at sea at the time of the census			IIN	
(including those who have no place of residence other than their quarters aboard ship)	\vdash	 		
(e) Civilian residents temporarily in another		1	IN	1
country as seasonal workers		†		1
(f) Civilian residents who cross a frontier daily	1		IN	1
to work in another country	1		<u> </u>	1
(g) Civilian residents other than those in (c)			IN	İ
(e), and (f) working in another country				
(h) Civilian residents other than those in (c)-(g)			IN	1
temporarily absent the country				1
(i) Foreign military,naval and diplomatic person-			EX	1
nel and their families located in the country	1			1
(j) Civilian aliens temporarily in the country			EX	
as seasonal workers				
(k) Civilian aliens who cross a frontier daily to			IN	
work in another country				
(I) Civilian aliens other than those in (i), (j)			IN	
and (k) working in another country			ΕV	
(m) Civilian aliens other than those in (i)-(l),			EX	
temporarily in country			EX

2B. POPULATION BY AGE AND SEX					
F-tit		1	ı		
Estimates of population according to age and sex are assumed to be					
constructed on the same base data as are the total estimates. However					
certain additional factors may be involved in the case of those age					
distributions estimated from the census enumerations or from sample					
surveys. Please indicate below the adjustment(s) made in the basic					
		<u> </u>			
age distribution used to construct estimates shown in Table PE-2 and 4.

URBAN AND RURAL POPULATION, AND THE POPULATION OF CITIES Post-censal estimates of the urban and rural population, or the population of individual cities can be made in various ways. In some countries continuous population registers permit the up-dating of local population estimates according to the registered balances of births, deaths, and changes of residence. In some countries, in relation to post-censual estimates of the total population, estimates of urban, or city population may be determined by an extrapolation of the percentage or urban in total, or city in urban, population. In some countries, urban and city population may be determined on the basis of rates of growth of urban or city population observed over a past period, by assuming such rates of growth to continue. Other methods are also possible. Please indicate below the method used in making post-censal estimates of urban and rural, or city population of percentage. 1. Population registers 2. Surveys, other than a census 3. Extrapolation of percentage 4. Observed rate of growth, assumed					
4. By other means (describe below) DISPOSITION OF UNKNOWN AGE If frequency in unknown age category of table PE-2 and 4 is zero please indicate below whether in the preparation of the estimates: 1. An age has been assigned to persons for whom age did not appear in the census or sample survey 2. Frequency in unknown age category has been distributed proportionately among known ages 3. The frequency of unknown age appearing the census or survey was zero 2. The frequency of unknown age appearing the census or survey was zero 2. URBAN AND RURAL POPULATION, AND THE POPULATION OF CITIES Post-censal estimates of the urban and rural population, or the population of individual cities can be made in various ways. In some countries continuous population registered balances of births, deaths, and changes of residence. In some countries, perhaps, periodic surveys permit the up-dating of urban or city population estimates. In some countries, in relation to post-censal estimates of the total population, estimates of urban, or city population may be determined by an extrapolation of the percentage or urban in total, or city in urban, population. In some countries, urban and city population may be determined on the basis of rates of growth of urban or city population between over a past period, by assuming such rates of growth to continue. Other methods are also possible. Please indicate below the method used in making post-censal estimates of urban and rural, or city population. 1. Population registers 2. Surveys, other than a census 3. Extrapolation of percentage 4. Observed orate of growth, assumed to continue.					
4. By other means (describe below) DISPOSITION OF UNKNOWN AGE If frequency in unknown age category of table PE-2 and 4 is zero please indicate below whether in the preparation of the estimates: 1. An age has been assigned to persons for whom age did not appear in the census or sample survey 2. Frequency in unknown age category has been distributed proportionately among known ages 3. The frequency of unknown age appearing the census or survey was zero 2. The frequency of unknown age appearing the census or survey was zero 2. URBAN AND RURAL POPULATION, AND THE POPULATION OF CITIES Post-censal estimates of the urban and rural population, or the population of individual cities can be made in various ways. In some countries continuous population registered balances of births, deaths, and changes of residence. In some countries, perhaps, periodic surveys permit the up-dating of urban or city population estimates. In some countries, in relation to post-censal estimates of the total population, estimates of urban, or city population may be determined by an extrapolation of the percentage or urban in total, or city in urban, population. In some countries, urban and city population may be determined on the basis of rates of growth of urban or city population observed over a past period, by assuming such rates of growth to continue. Other methods are also possible. Please indicate below the method used in making post-censal estimates of urban and rural, or city population. 1. Population registers 2. Surveys, other than a census 3. Extrapolation of precentage 4. Observed rate of growth, assumed to continue.					

BIBLIOGRAPHY OF DEMOGRAPHIC STATISTICS			
In order to bring up to date the bibliographical information you kindly			
supplied with last year's questionnaire, please list below publication			
which have become available since that time or are to be issued in the			
near future which contain results of your latest population census or			
survey, and current statistics on population estimates, vital statistics			
and internation migration.			
This information is being requested for the purpose of compiling and			
maintaining a current bibliography of demographic statistics. The			
citations should, therefore, be in a form suitable for reference			
purposes, i.e., the TITLE, ISSUING AGENCY or AUTHOR, PLACE, DATE OF			
PUBLICATION and NUMBER OF PAGES should be give.			
Example:			
Demographic Yearbook, 1967. United Nations, New York, 1968, 778 pp.
