In order that the description of national population series on file			
in the Statistical Division of the United Nations maybe as up to date			
as possible, it is desirable to provide for confirmation or revision			
of the method of their construction. The questions below relate to			
coverage of data and method of estimation. It is requested that a "X" be			
made in the field following the words which best describe the estimates			
in terms of these questions.			

1. COVERAGE OF DATA				
In conformity with definition given on the instructions, estimates should				
relate to DE FACTO population. In order to clarify the exact composition				
please indicate in the following check box the exact disposition of each				
group listed, using "IN" for included; "EX" for excluded. Specify years				
to which description refers.				
POPULATION GROUP		ESTIMATED TOTAL FOR:		
	 		2001	

(a) Nomads		 -
(b) Persons living in remote areas		-
(c) Military,naval and diplomatic personnel and		
their families located outside the country		IN
(d) Merchant seamen and fishermen resident in the		
country but at sea at the time of the census		
(including those who have no place of residence		
other than their quarters aboard ship)		-
(e) Civilian residents temporarily in another		
country as seasonal workers		EX
(f) Civilian residents who cross a frontier daily		
to work in another country		IN
(g) Civilian residents other than those in (c)		
(e), and (f) working in another country		EX
(h) Civilian residents other than those in (c)-(g)		
temporarily absent the country		EX
(i) Foreign military,naval and diplomatic person-		
nel and their families located in the country		EX
(j) Civilian aliens temporarily in the country		
as seasonal workers		IN
(k) Civilian aliens who cross a frontier daily to		
work in another country		EX
(I) Civilian aliens other than those in (i), (j)		
and (k) working in another country		EX
(m) Civilian aliens other than those in (i)-(l),		
temporarily in country		IN
(n) Transients on ships in harbour at the time		
of the census		-

2. METHOD OF ESTIMATION			
	-	-	
2A. TOTAL POPULATION			
Estimates of total population for a country as a whole may be			
constructed by a variety of means. Please indicate by a check			
mark "X" the method used in constructing the latest population			
estimate for (date):		, indicating the "base data"	
and the "method of adjustment" in accordance with the components			
of the code described in the "Technical Notes" of each Demographic			
Yearbook (pages 9-10 of the 1968 issue) and reported below:			
BASE DATA			
1. Continuous population register		x	
2. Complete conque taken (data):			

1. Continuous population register		x	
2. Complete census taken (date):			
i. population actually enumerated			
ii. population adjusted to take account of			% underenu-
			meration
3. Sample survey taken (date):			
Partial census taken or partial registration (date):			
(please describe)			
5. Non-censal count of (date):			
(describe method)			
6. Conjectural estimate derived by means other than counting			
(describe method)			

METHOD OF TIME ADJUSTMENT			
1. Base data secured annually by population register			
2. Applying statistics of births and deaths (natural increase), and			
migration:			
i. registered vital statistics			
ii. vital statistics adjusted for incompleteness			
3. Applying statistics of births and deaths (natural increase), but			
no account taken of migration:			
i. registered vital statistics			
ii. vital statistics adjusted for incompleteness			
4. Extrapolating mathematically from censuses taken (dates):			
Please give formula:			
5. Applying an assumed rate of increase, not derived by mathematical			
extrapolation or interpolation but based on:			
i. assumption with respect to mortality, fertility and			
migration			
ii. assumption with respect to mortality, fertility but			
no account taken of migration			
iii. other assumed rate			
If (i), (ii) or (iii) is checked, please give rate used and			
describe how obtained:			
6. No time adjustment (base figure held constant)			
7. Other (explain):			

2B. POPULATION BY AGE AND SEX			
Estimates of population according to age and sex are assumed to be			
constructed on the same base data as are the total estimates. However			
certain additional factors may be involved in the case of those age			
distributions estimated from the census enumerations or from sample			
surveys. Please indicate below the adjustment(s) made in the basic			
age distribution used to construct estimates shown in Table PE-2 and 4.			
ADJUSTMENTS IN BASE			
i. None - based on population actually enumerated at various ages			
or estimated from survey results			
ii. Enumerated population or population estimated from survey			
results adjusted to take account of underenumeration at			
various ages			
iii. Base age distribution "smoothed", i.e., adjusted to remove			
effects of digit preference in age reporting			

METHOD OF TIME ADJUSTMENT			
Distribution of estimated population according to age and sex may			
also be made by same methods as used to obtain the projection of the			
total figure, or it may be derived by distributing the estimate			
according to the percentage of population in each age-sex group at the			
time of the census.Please indicate below the method used in constructing			
the age-sex distribution of the latest estimate shown in Table PE-2.			
1. Applying actual or assumed natural increase			
and migration			
2. Applying actual or assumed natural increase alone			
3. Distributing the total estimate according to percentage of			
population in each age-sex group at time of census of			
sample survey			
4. By other means (describe below)			
DISPOSITION OF UNKNOWN AGE			
If frequency in unknown age category of table PE-2 and 4 is zero			
please indicate below whether in the preparation of the estimates:			
1. An age has been assigned to persons for whom age did not appear			
in the census or sample survey			

2. Frequency in unknown age category has been distributed		
proportionately among known ages		
The frequency of unknown age appearing the census or survey		
was zero		

2C. URBAN AND RURAL POPULATION, AND THE POPULATION OF CITIES					1
2C. ORDAIN AND RURAL POPULATION, AND THE POPULATION OF CITIES					l
Post-censal estimates of the urban and rural population, or the					1
population of individual cities can be made in various ways. In some					
countries continuous population registers permit the up-dating of local					
population estimates according to the registered balances of births,					
deaths, and changes of residence. In some countries, perhaps, periodic					
surveys permit the up-dating of urban or city population estimates. In					
some countries, in relation to post-censal estimates of the total					
population, estimates of urban, or city population may be determined					
by an extrapolation of the percentage or urban in total, or city in					
urban, population. In some countries, urban and city population may be					
determined on the basis of rates of growth of urban or city population					
observed over a past period, by assuming such rates of growth to					
continue. Other methods are also possible. Please indicate below the					
method used in making post-censal estimates of urban and rural, or					
city population.	1				
	1		Urban	1	City
	1		population	1	population
1. Population registers	1		· ·		X
2. Surveys, other than a census	1				
3. Extrapolation of percentage	1			1	
4. Observed rate of growth, assumed					
to continue					
5. By other means (describe)					
BIBLIOGRAPHY OF DEMOGRAPHIC STATISTICS					
In order to bring up to date the bibliographical information you kindly					
supplied with last year's questionnaire, please list below publication					
which have become available since that time or are to be issued in the					
near future which contain results of your latest population census or					
survey, and current statistics on population estimates, vital statistics					
and internation migration.					
This information is being requested for the purpose of compiling and					
maintaining a current bibliography of demographic statistics. The					
citations should, therefore, be in a form suitable for reference					
purposes, i.e., the TITLE, ISSUING AGENCY or AUTHOR, PLACE, DATE OF	1				
PUBLICATION and NUMBER OF PAGES should be give.	1
