DESCRIPTION OF POPULATION ESTIMATES FOR LATEST YEAR
GIVEN IN THIS QUESTIONNAIRE

In order that the description of national population series on file in the Statistical Office of
the United Nations may be as up to date and complete as possible, it is desirable to provide for
confirmation or revision of the method of their construction. The questions below relate to coverage
of data and method of estimation. It is requested that a check mark ( X ) be made in the box following
the words which best describe the estimates in terms of these questions.

1. COVERAGE OF DATA

In conformity with definition given on page 2, estimates should relate to de facto population
In order to clarify the exact composition of the population, please indicate in the following check box
the exact disposition of each group listed, using "IN" for included; "EX" for excluded. Specify years
to which description refers.

<table>
<thead>
<tr>
<th>Population Group</th>

</tbody>
</table>

*) g) and l) PERSONS WHO HAVE LEFT SWEDEN WITH THE INTENTION OF REMAINING ABROAD FOR MORE THAN ONE YEAR ARE EXCLUDED IN THE POPULATION ESTIMATE. PERSONS WHO HAVE LEFT SWEDEN WITH THE INTENTION OF REMAINING ABROAD FOR ONE YEAR OR LESS ARE INCLUDED IN THE POPULATION ESTIMATE DURING THEIR FIRST YEAR OF ABSENCE.
5) Applying an assumed rate of increase, not derived by mathematical extrapolation or interpolation but based on:
   i) Assumption with respect to mortality, fertility, migration !___!
   ii) Assumption with respect to mortality, fertility, but no account taken of migration !___!
   iii) Other assumed rate !___!
      If (i) or (iii) is checked, please give rate used, and describe how obtained:

6) No time adjustment (base figure held constant !___!)

7) Other (explain)

b) Population by age and sex

   Estimates of population according to age and sex are assumed to be constructed on the same base data as are the total estimates. However, certain additional factors may be involved in the case of those age distributions estimated from census enumerations or from sample surveys. Please indicate below the adjustments(s) made in the basic age distribution used to construct estimates shown in Tables 2 and 4.

   Adjustments in base
   i) None-based on population actually enumerated at various ages or estimated from survey results !___!
   ii) Enumerated population or population estimated from survey results adjusted to take account of underenumeration at various age !___!
   iii) Base age distribution "smoothed", i.e., adjusted to remove effects of digit preference in age reporting !___!

   Method of time adjustment

   Distribution of estimated population according to age and sex may also be made by same methods as used to obtain the projection of the total figure, or it may be derived by distributing the estimate according to the percentage of population in each age-sex group at time of census. Please indicate below the method used in constructing the age-sex distribution of the latest estimate shown in Table 2.

   i) Applying actual or assumed natural increase and migration !✓!
   2) Applying actual or assumed natural increase alone !___!
   3) Distributing the total estimate according to percentage of population in each age-sex group at time of census of sample survey !___!
   4) By other means (describe)

---

COUNTRY: Sweden

---
Disposition of unknown age

If frequency in unknown age category of tables 2 and 4 is zero, please indicate below whether:
in the preparation of the estimates:

1) An age has been assigned to persons for whom age did not appear in the census or sample survey? ___!

2) Frequency in unknown age category has been distributed proportionately among known ages? ___!

3) The frequency of unknown age appearing the census or survey was zero? ___!

c) Urban and rural population, and the population of cities

Post-censal estimates of the urban and rural population, or the population of individual cities, can be made in various ways. In some countries continuous population registers permit the updating of local population estimates according to registered balances of births, deaths, and changes of residence. In some countries, perhaps, periodic surveys permit the updating of urban or city population estimates. In some countries, in relation to post-censal estimates of total population, estimates of urban, or city population may be determined by an extrapolation of the percentage of urban in total, or city in urban, population. In some countries, urban and city population may be determined on the basis of rates of growth of urban or city population observed over a past period, or by assuming such rates of growth to continue. Other methods are also possible. Please indicate below the method used in making post-censal estimates of urban and rural, or of city population.

2. METHOD OF ESTIMATION

a) Total population

Estimates of total population for a country as a whole may be constructed by a variety of means. Please indicate by a check mark (X) the method used in constructing the latest population estimate for (date)_________ ________, indicating the "base data" and the "method of time adjustment" in accordance with the components of the code described in the "Technical Notes" of each Demographic Yearbook (pages 9-10 of the 1968 issue) and reported below:

Base Data

1) Continuous population register 中不

2) Complete census taken (date) 1985-11-01 中不
   i) population actually enumerated 中不
   ii) population adjusted to take account of ______% underenumeration

3) Sample survey taken (date) 中不

4) Partial census taken or partial registration (date) 中不
   (Please describe) 中不

5) Non-censal count of (date) 中不
   (describe method) 中不

6) Conjectural estimate derived by means other than counting 中不
   (describe method) 中不

METHOD OF TIME ADJUSTMENT

1) Base data secured annually by population register 中不

2) Applying statistics of births and deaths (natural increase), and migration
   i) Registered vital statistics 中不
   ii) Vital statistics adjusted for incompleteness 中不

3) Applying statistics of births and deaths (natural increase), but no account taken of migration
   i) Registered vital statistics 中不
   ii) Vital statistics adjusted for incompleteness 中不

4) Extrapolating mathematically from censuses taken (dates) 中不
   and 中不. Please give formula: 中不
