In order that the description of national population series on file							
in the Statistical Division of the United Nations maybe as up to date							
as possible, it is desirable to provide for confirmation or revision							
of the method of their construction. The questions below relate to							
coverage of data and method of estimation. It is requested that a "X" be							
made in the field following the words which best describe the estimates							
in terms of these questions.							
1. COVERAGE OF DATA							
In conformity with definition given on the instructions,estimates should							
relate to DE FACTO population. In order to clarify the exact composition							
please indicate in the following check box the exact disposition of each							
group listed, using "IN" for included; "EX" for excluded. Specify years							
to which description refers.							
POPULATION GROUP			ESTIMATED TOTAL FOR:				
				19			
(a) Nomads							
(b) Persons living in remote areas							
(c) Military,naval and diplomatic personnel and							
their families located outside the country							
(d) Merchant seamen and fishermen resident in the							
country but at sea at the time of the census							
(including those who have no place of residence	1	1		-			
other than their quarters aboard ship)	1	1		ļ			
(e) Civilian residents temporarily in another	1	ļ					
country as seasonal workers	1	<u> </u>					
(f) Civilian residents who cross a frontier daily		L					
to work in another country							
(g) Civilian residents other than those in (c)							
(e), and (f) working in another country							
(h) Civilian residents other than those in (c)-(g)							
temporarily absent the country	1	t					
	1	1	<u> </u>	1			
(i) Foreign military,naval and diplomatic person-	 	-		-			
nel and their families located in the country	1			-			
(j) Civilian aliens temporarily in the country							
as seasonal workers							
(k) Civilian aliens who cross a frontier daily to							
work in another country							
(I) Civilian aliens other than those in (i), (j)							
and (k) working in another country							
(m) Civilian aliens other than those in (i)-(l),							
temporarily in country							
(n) Transients on ships in harbour at the time							
(ii) Transients on snips in narbour at the time							
of the consus							
of the census					l I		
2. METHOD OF ESTIMATION 2A. TOTAL POPULATION					 	1	
METHOD OF ESTIMATION 2A. TOTAL POPULATION Estimates of total population for a country as a whole may be]	
METHOD OF ESTIMATION 2A. TOTAL POPULATION Estimates of total population for a country as a whole may be constructed by a variety of means. Please indicate by a check							
2. METHOD OF ESTIMATION 2A. TOTAL POPULATION Estimates of total population for a country as a whole may be							
METHOD OF ESTIMATION 2A. TOTAL POPULATION Estimates of total population for a country as a whole may be constructed by a variety of means. Please indicate by a check			, indicating the "base data"				
METHOD OF ESTIMATION 2A. TOTAL POPULATION Estimates of total population for a country as a whole may be constructed by a variety of means. Please indicate by a check mark "X" the method used in constructing the latest population			, indicating the "base data"				
2. METHOD OF ESTIMATION 2.A. TOTAL POPULATION Estimates of total population for a country as a whole may be constructed by a variety of means. Please indicate by a check mark "X" the method used in constructing the latest population estimate for (date):			, indicating the "base data"				
2. METHOD OF ESTIMATION 2.A. TOTAL POPULATION Estimates of total population for a country as a whole may be constructed by a variety of means. Please indicate by a check mark "X" the method used in constructing the latest population estimate for (date): and the "method of adjustment" in accordance with the components			, indicating the "base data"				
2. METHOD OF ESTIMATION 2A. TOTAL POPULATION Estimates of total population for a country as a whole may be constructed by a variety of means. Please indicate by a check mark "X" the method used in constructing the latest population estimate for (date): and the "method of adjustment" in accordance with the components of the code described in the "Technical Notes" of each Demographic			, indicating the "base data"				
2. METHOD OF ESTIMATION 2A. TOTAL POPULATION Estimates of total population for a country as a whole may be constructed by a variety of means. Please indicate by a check mark "X" the method used in constructing the latest population estimate for (date): and the "method of adjustment" in accordance with the components of the code described in the "Technical Notes" of each Demographic Yearbook (pages 9-10 of the 1968 issue) and reported below:			, indicating the "base data"				
2. METHOD OF ESTIMATION 2A. TOTAL POPULATION Estimates of total population for a country as a whole may be constructed by a variety of means. Please indicate by a check mark "X" the method used in constructing the latest population estimate for (date): and the "method of adjustment" in accordance with the components of the code described in the "Technical Notes" of each Demographic Yearbook (pages 9-10 of the 1968 issue) and reported below: BASE DATA	I N		, indicating the "base data"				
2. METHOD OF ESTIMATION 2.A. TOTAL POPULATION Estimates of total population for a country as a whole may be constructed by a variety of means. Please indicate by a check mark "X" the method used in constructing the latest population estimate for (date): and the "method of adjustment" in accordance with the components of the code described in the "Technical Notes" of each Demographic Yearbook (pages 9-10 of the 1968 issue) and reported below: BASE DATA 1. Continuous population register	X		, indicating the "base data"				
2. METHOD OF ESTIMATION 2A. TOTAL POPULATION Estimates of total population for a country as a whole may be constructed by a variety of means. Please indicate by a check mark "X" the method used in constructing the latest population estimate for (date): and the "method of adjustment" in accordance with the components of the code described in the "Technical Notes" of each Demographic Yearbook (pages 9-10 of the 1968 issue) and reported below: BASE DATA 1. Continuous population register 2. Complete census taken (date):	X		, indicating the "base data"				
2. METHOD OF ESTIMATION 2A. TOTAL POPULATION Estimates of total population for a country as a whole may be constructed by a variety of means. Please indicate by a check mark "X" the method used in constructing the latest population estimate for (date): and the "method of adjustment" in accordance with the components of the code described in the "Technical Notes" of each Demographic Yearbook (pages 9-10 of the 1968 issue) and reported below: BASE DATA 1. Continuous population register 2. Complete census taken (date): i. population actually enumerated	x		, indicating the "base data"		% indecent.		
2. METHOD OF ESTIMATION 2A. TOTAL POPULATION Estimates of total population for a country as a whole may be constructed by a variety of means. Please indicate by a check mark "X" the method used in constructing the latest population estimate for (date): and the "method of adjustment" in accordance with the components of the code described in the "Technical Notes" of each Demographic Yearbook (pages 9-10 of the 1968 issue) and reported below: BASE DATA 1. Continuous population register 2. Complete census taken (date):	x		, indicating the "base data"		% underenu-		
2. METHOD OF ESTIMATION 2A. TOTAL POPULATION Estimates of total population for a country as a whole may be constructed by a variety of means. Please indicate by a check mark "X" the method used in constructing the latest population estimate for (date): and the "method of adjustment" in accordance with the components of the code described in the "Technical Notes" of each Demographic Yearbook (pages 9-10 of the 1968 issue) and reported below: BASE DATA 1. Continuous population register 2. Complete census taken (date): i. population actually enumerated ii. population adjusted to take account of	x		, indicating the "base data"		% underenu- meration		
2. METHOD OF ESTIMATION 2A. TOTAL POPULATION Estimates of total population for a country as a whole may be constructed by a variety of means. Please indicate by a check mark "X" the method used in constructing the latest population estimate for (date): and the "method of adjustment" in accordance with the components of the code described in the "Technical Notes" of each Demographic Yearbook (pages 9-10 of the 1968 issue) and reported below: BASE DATA 1. Continuous population register 2. Complete census taken (date): i. population actually enumerated ii. population adjusted to take account of 3. Sample survey taken (date):	x		, indicating the "base data"				
2. METHOD OF ESTIMATION 2.A. TOTAL POPULATION Estimates of total population for a country as a whole may be constructed by a variety of means. Please indicate by a check mark "X" the method used in constructing the latest population estimate for (date): and the "method of adjustment" in accordance with the components of the code described in the "Technical Notes" of each Demographic Yearbook (pages 9-10 of the 1968 issue) and reported below: BASE DATA 1. Continuous population register 2. Complete census taken (date): 1. population adjusted to take account of 3. Sample survey taken (date): 4. Partial census taken or partial registration (date):	X		, indicating the "base data"				
2. METHOD OF ESTIMATION 2A. TOTAL POPULATION Estimates of total population for a country as a whole may be constructed by a variety of means. Please indicate by a check mark "X" the method used in constructing the latest population estimate for (date): and the "method of adjustment" in accordance with the components of the code described in the "Technical Notes" of each Demographic Yearbook (pages 9-10 of the 1968 issue) and reported below: BASE DATA 1. Continuous population register 2. Complete census taken (date): i. population actually enumerated ii. population adjusted to take account of 3. Sample survey taken (date):	X		, indicating the "base data"				
2. METHOD OF ESTIMATION 2.A. TOTAL POPULATION Estimates of total population for a country as a whole may be constructed by a variety of means. Please indicate by a check mark "X" the method used in constructing the latest population estimate for (date): and the "method of adjustment" in accordance with the components of the code described in the "Technical Notes" of each Demographic Yearbook (pages 9-10 of the 1968 issue) and reported below: BASE DATA 1. Continuous population register 2. Complete census taken (date): 1. population adjusted to take account of 3. Sample survey taken (date): 4. Partial census taken or partial registration (date):	X		, indicating the "base data"				
2. METHOD OF ESTIMATION 2.A. TOTAL POPULATION Estimates of total population for a country as a whole may be constructed by a variety of means. Please indicate by a check mark "X" the method used in constructing the latest population estimate for (date): and the "method of adjustment" in accordance with the components of the code described in the "Technical Notes" of each Demographic Yearbook (pages 9-10 of the 1968 issue) and reported below: BASE DATA 1. Continuous population register 2. Complete census taken (date): i. population actually enumerated ii. population adjusted to take account of 3. Sample survey taken (date): 4. Partial census taken (date): (please describe)	X		, indicating the "base data"				
2. METHOD OF ESTIMATION 2.A. TOTAL POPULATION Estimates of total population for a country as a whole may be constructed by a variety of means. Please indicate by a check mark "X" the method used in constructing the latest population estimate for (date): and the "method of adjustment" in accordance with the components of the code described in the "Technical Notes" of each Demographic Yearbook (pages 9-10 of the 1968 issue) and reported below: BASE DATA 1. Continuous population register 2. Complete census taken (date): i. population actually enumerated ii. population adjusted to take account of 3. Sample survey taken (date): 4. Partial census taken or partial registration (date): (please describe) 5. Non-censal count of (date):	X		, indicating the "base data"				
2. METHOD OF ESTIMATION 2.A. TOTAL POPULATION Estimates of total population for a country as a whole may be constructed by a variety of means. Please indicate by a check mark "X" the method used in constructing the latest population estimate for (date): and the "method of adjustment" in accordance with the components of the code described in the "Technical Notes" of each Demographic Yearbook (pages 9-10 of the 1968 issue) and reported below: BASE DATA 1. Continuous population register 2. Complete census taken (date): i. population actually enumerated ii. population adjusted to take account of 3. Sample survey taken (date): 4. Partial census taken (date): (please describe)	x		, indicating the "base data"				
2. METHOD OF ESTIMATION 2.A. TOTAL POPULATION Estimates of total population for a country as a whole may be constructed by a variety of means. Please indicate by a check mark "X" the method used in constructing the latest population estimate for (date): and the "method of adjustment" in accordance with the components of the code described in the "Technical Notes" of each Demographic Yearbook (pages 9-10 of the 1968 issue) and reported below: BASE DATA 1. Continuous population register 2. Complete census taken (date): i. population actually enumerated ii. population adjusted to take account of 3. Sample survey taken (date): 4. Partial census taken or partial registration (date): (please describe) 5. Non-censal count of (date):	X		, indicating the "base data"				
2. METHOD OF ESTIMATION 2.A. TOTAL POPULATION Estimates of total population for a country as a whole may be constructed by a variety of means. Please indicate by a check mark "X" the method used in constructing the latest population estimate for (date): and the "method of adjustment" in accordance with the components of the code described in the "Technical Notes" of each Demographic Yearbook (pages 9-10 of the 1968 issue) and reported below: BASE DATA 1. Continuous population register 2. Complete census taken (date): i. population actually enumerated ii. population adjusted to take account of 3. Sample survey taken (date): 4. Partial census taken or partial registration (date): (please describe) 5. Non-censal count of (date):	X		, indicating the "base data"				
2. METHOD OF ESTIMATION 2A. TOTAL POPULATION Estimates of total population for a country as a whole may be constructed by a variety of means. Please indicate by a check mark "X" the method used in constructing the latest population estimate for (date): and the "method of adjustment" in accordance with the components of the code described in the "Technical Notes" of each Demographic Yearbook (pages 9-10 of the 1968 issue) and reported below: BASE DATA 1. Continuous population register 2. Complete census taken (date): i. population actually enumerated ii. population adjusted to take account of 3. Sample survey taken (date): 4. Partial census taken or partial registration (date): (please describe) 5. Non-censal count of (date): (describe method)	X		, indicating the "base data"				
2. METHOD OF ESTIMATION 2. A. TOTAL POPULATION Estimates of total population for a country as a whole may be constructed by a variety of means. Please indicate by a check mark "X" the method used in constructing the latest population estimate for (date): and the "method of adjustment" in accordance with the components of the code described in the "Technical Notes" of each Demographic Yearbook (pages 9-10 of the 1968 issue) and reported below: BASE DATA 1. Continuous population register 2. Complete census taken (date): i. population actually enumerated ii. population actually enumerated ii. population actually enumerated ii. population actually enumerated (date): 4. Partial census taken or partial registration (date): (please describe) 5. Non-censal count of (date): (describe method)	X		, indicating the "base data"				
2. METHOD OF ESTIMATION 2.A. TOTAL POPULATION Estimates of total population for a country as a whole may be constructed by a variety of means. Please indicate by a check mark "X" the method used in constructing the latest population estimate for (date): and the "method of adjustment" in accordance with the components of the code described in the "Technical Notes" of each Demographic Yearbook (pages 9-10 of the 1968 issue) and reported below: BASE DATA 1. Continuous population register 2. Complete census taken (date): i. population actually enumerated ii. population adjusted to take account of 3. Sample survey taken (date): 4. Partial census taken or partial registration (date): (please describe) 5. Non-censal count of (date): (describe method)	X		, indicating the "base data"				
2. METHOD OF ESTIMATION 2. A. TOTAL POPULATION Estimates of total population for a country as a whole may be constructed by a variety of means. Please indicate by a check mark "X" the method used in constructing the latest population estimate for (date): and the "method of adjustment" in accordance with the components of the code described in the "Technical Notes" of each Demographic Yearbook (pages 9-10 of the 1968 issue) and reported below: BASE DATA 1. Continuous population register 2. Complete census taken (date): i. population actually enumerated ii. population actually enumerated ii. population actually enumerated ii. population actually enumerated (date): 4. Partial census taken or partial registration (date): (please describe) 5. Non-censal count of (date): (describe method)	X		, indicating the "base data"				
2. METHOD OF ESTIMATION 2. A. TOTAL POPULATION Estimates of total population for a country as a whole may be constructed by a variety of means. Please indicate by a check mark "X" the method used in constructing the latest population estimate for (date): and the "method of adjustment" in accordance with the components of the code described in the "Technical Notes" of each Demographic Yearbook (pages 9-10 of the 1968 issue) and reported below: BASE DATA 1. Continuous population register 2. Complete census taken (date): i. population actually enumerated ii. population actually enumerated ii. population actually enumerated ii. population actually enumerated (date): 4. Partial census taken or partial registration (date): (please describe) 5. Non-censal count of (date): (describe method)	X		, indicating the "base data"				
2. METHOD OF ESTIMATION 2.A. TOTAL POPULATION Estimates of total population for a country as a whole may be constructed by a variety of means. Please indicate by a check mark "X" the method used in constructing the latest population estimate for (date): and the "method of adjustment" in accordance with the components of the code described in the "Technical Notes" of each Demographic Yearbook (pages 9-10 of the 1968 issue) and reported below: BASE DATA 1. Continuous population register 2. Complete census taken (date): 1. population actually enumerated ii. population adjusted to take account of 3. Sample survey taken (date): 4. Partial census taken or partial registration (date): (please describe) 5. Non-censal count of (date): (describe method) 6. Conjectural estimate derived by means other than counting (describe method)	x		, indicating the "base data"				
2. METHOD OF ESTIMATION 2A. TOTAL POPULATION Estimates of total population for a country as a whole may be constructed by a variety of means. Please indicate by a check mark "X" the method used in constructing the latest population estimate for (date): and the "method of adjustment" in accordance with the components of the code described in the "Technical Notes" of each Demographic Yearbook (pages 9-10 of the 1968 issue) and reported below: BASE DATA 1. Continuous population register 2. Complete census taken (date): i. population actually enumerated ii. population adjusted to take account of 3. Sample survey taken (date): 4. Partial census taken or partial registration (date): (please describe) 5. Non-censal count of (date): (describe method) 6. Conjectural estimate derived by means other than counting (describe method) METHOD OF TIME ADJUSTMENT 1. Base data secured annually by population register	X		, indicating the "base data"				
2. METHOD OF ESTIMATION 2. A. TOTAL POPULATION Estimates of total population for a country as a whole may be constructed by a variety of means. Please indicate by a check mark "X" the method used in constructing the latest population estimate for (date): and the "method of adjustment" in accordance with the components of the code described in the "Technical Notes" of each Demographic Yearbook (pages 9-10 of the 1968 issue) and reported below: BASE DATA 1. Continuous population register 2. Complete census taken (date): i. population actually enumerated ii. population actually enumerated ii. population actually enumerated ii. population actually enumerated (date): 4. Partial census taken or partial registration (date): (please describe) 5. Non-censal count of (date): (describe method) METHOD OF TIME ADJUSTMENT 1. Base data secured annually by population register 2. Applying stalistics of births and deaths (natural increase), and	x		, indicating the "base data"				
2. METHOD OF ESTIMATION 2.A. TOTAL POPULATION Estimates of total population for a country as a whole may be constructed by a variety of means. Please indicate by a check mark "X" the method used in constructing the latest population estimate for (date): and the "method of adjustment" in accordance with the components of the code described in the "Technical Notes" of each Demographic Yearbook (pages 9-10 of the 1968 issue) and reported below: BASE DATA 1. Continuous population register 2. Complete census taken (date): i. population actually enumerated ii. population adjusted to take account of 3. Sample survey taken (date): 4. Partial census taken or partial registration (date): (please describe) 5. Non-censal count of (date): (describe method) 6. Conjectural estimate derived by means other than counting (describe method) METHOD OF TIME ADJUSTMENT 1. Base data secured annually by population register 2. Applying statistics of births and deaths (natural increase), and migration:	X		, indicating the "base data"				
2. METHOD OF ESTIMATION 2.A. TOTAL POPULATION Estimates of total population for a country as a whole may be constructed by a variety of means. Please indicate by a check mark "X" the method used in constructing the latest population estimate for (date): and the "method of adjustment" in accordance with the components of the code described in the "Technical Notes" of each Demographic Yearbook (pages 9-10 of the 1968 issue) and reported below: BASE DATA 1. Continuous population register 2. Complete census taken (date): i. population actually enumerated ii. population adjusted to take account of 3. Sample survey taken (date): 4. Partial census taken or partial registration (date): (please describe) 5. Non-censal count of (date): (describe method) METHOD OF TIME ADJUSTMENT 1. Base data secured annually by population register 2. Applying statistics of births and deaths (natural increase), and migration: i. registered vital statistics	X		, indicating the "base data"				
2. METHOD OF ESTIMATION 2. TOTAL POPULATION Estimates of total population for a country as a whole may be constructed by a variety of means. Please indicate by a check mark "X" the method used in constructing the latest population estimate for (date): and the "method of adjustment" in accordance with the components of the code described in the "Technical Notes" of each Demographic Yearbook (pages 9-10 of the 1968 issue) and reported below: BASE DATA 1. Continuous population register 2. Complete census taken (date): i. population adjusted to take account of 3. Sample survey taken (date): 4. Partial census taken or partial registration (date): (please describe) 5. Non-censal count of (date): (describe method) METHOD OF TIME ADJUSTMENT 1. Base data secured annually by population register 2. Applying statistics of births and deaths (natural increase), and migration: i. registered vital statistics ii. vital statistics adjusted for incompleteness	x		, indicating the "base data"				
2. METHOD OF ESTIMATION 2.A. TOTAL POPULATION Estimates of total population for a country as a whole may be constructed by a variety of means. Please indicate by a check mark "X" the method used in constructing the latest population estimate for (date): and the "method of adjustment" in accordance with the components of the code described in the "Technical Notes" of each Demographic Yearbook (pages 9-10 of the 1968 issue) and reported below: BASE DATA 1. Continuous population register 2. Complete census taken (date): i. population actually enumerated ii. population adjusted to take account of 3. Sample survey taken (date): 4. Partial census taken or partial registration (date): (please describe) 5. Non-censal count of (date): (describe method) METHOD OF TIME ADJUSTMENT 1. Base data secured annually by population register 2. Applying statistics of births and deaths (natural increase), and migration: i. registered vital statistics	X		, indicating the "base data"				
2. METHOD OF ESTIMATION 2.A. TOTAL POPULATION Estimates of total population for a country as a whole may be constructed by a variety of means. Please indicate by a check mark "X" the method used in constructing the latest population estimate for (date): and the "method of adjustment" in accordance with the components of the code described in the "Technical Notes" of each Demographic Yearbook (pages 9-10 of the 1968 issue) and reported below: BASE DATA 1. Continuous population register 2. Complete census taken (date): i. population actually enumerated ii. population actually enumerated ii. population adjusted to take account of 3. Sample survey taken (date): 4. Partial census taken or partial registration (date): (please describe) 5. Non-censal count of (date): (describe method) 6. Conjectural estimate derived by means other than counting (describe method) METHOD OF TIME ADJUSTMENT 1. Base data secured annually by population register 2. Applying statistics of births and deaths (natural increase), and migration: i. registered vital statistics ii. vital statistics adjusted for incompleteness 3. Applying statistics of births and deaths (natural increase), but	X		, indicating the "base data"				
2. METHOD OF ESTIMATION 2.A. TOTAL POPULATION Estimates of total population for a country as a whole may be constructed by a variety of means. Please indicate by a check mark "X" the method used in constructing the latest population estimate for (date): and the "method of adjustment" in accordance with the components of the code described in the "Technical Notes" of each Demographic Yearbook (pages 9-10 of the 1968 issue) and reported below: BASE DATA 1. Continuous population register 2. Complete census taken (date): i. population actually enumerated ii. population adjusted to take account of 3. Sample survey taken (date): 4. Partial census taken or partial registration (date): (please describe) 5. Non-censal count of (date): (describe method) 6. Conjectural estimate derived by means other than counting (describe method) METHOD OF TIME ADJUSTMENT 1. Base data secured annually by population register 2. Applying statistics of births and deaths (natural increase), and migration: i. registered vital statistics ii. vital statistics adjusted for incompleteness 3. Applying statistics of births and deaths (natural increase), but no account taken of migration:	X		, indicating the "base data"				
2. METHOD OF ESTIMATION 2. TOTAL POPULATION Estimates of total population for a country as a whole may be constructed by a variety of means. Please indicate by a check mark "X" the method used in constructing the latest population estimate for (date): and the "method of adjustment" in accordance with the components of the code described in the "Technical Notes" of each Demographic Yearbook (pages 9-10 of the 1968 issue) and reported below: BASE DATA 1. Continuous population register 2. Complete census taken (date): i. population actually enumerated ii. population actually enumerated ii. population actually enumerated ii. population actually enumerated (date): (please describe) 5. Non-censal count of (date): (describe method) 6. Conjectural estimate derived by means other than counting (describe method) METHOD OF TIME ADJUSTMENT 1. Base data secured annually by population register 2. Applying statistics of births and deaths (natural increase), and migration: i. registered vital statistics ii. vital statistics adjusted for incompleteness 3. Applying statistics of births and deaths (natural increase), but no account taken of migration: i. registered vital statistics ii. registered vital statistics	X		, indicating the "base data"				
2. METHOD OF ESTIMATION 2.A. TOTAL POPULATION Estimates of total population for a country as a whole may be constructed by a variety of means. Please indicate by a check mark "X" the method used in constructing the latest population estimate for (date): and the "method of adjustment" in accordance with the components of the code described in the "Technical Notes" of each Demographic Yearbook (pages 9-10 of the 1968 issue) and reported below: BASE DATA 1. Continuous population register 2. Complete census taken (date): i. population actually enumerated ii. population adjusted to take account of 3. Sample survey taken (date): (.) Partial census taken or partial registration (date): (please describe) 5. Non-censal count of (date): (describe method) 6. Conjectural estimate derived by means other than counting (describe method) METHOD OF TIME ADJUSTMENT 1. Base data secured annually by population register 2. Applying statistics of births and deaths (natural increase), and migration: i. registered vital statistics ii. vital statistics adjusted for incompleteness 3. Applying statistics of births and deaths (natural increase), but no account taken of migration: i. registered vital statistics ii. vital statistics adjusted for incompleteness ii. vital statistics adjusted for incompleteness ii. vital statistics adjusted for incompleteness	x		, indicating the "base data"				
2. METHOD OF ESTIMATION 2. TOTAL POPULATION Estimates of total population for a country as a whole may be constructed by a variety of means. Please indicate by a check mark "X" the method used in constructing the latest population estimate for (date): and the "method of adjustment" in accordance with the components of the code described in the "Technical Notes" of each Demographic Yearbook (pages 9-10 of the 1968 issue) and reported below: BASE DATA 1. Continuous population register 2. Complete census taken (date): i. population actually enumerated ii. population actually enumerated ii. population actually enumerated ii. population actually enumerated (date): (please describe) 5. Non-censal count of (date): (describe method) 6. Conjectural estimate derived by means other than counting (describe method) METHOD OF TIME ADJUSTMENT 1. Base data secured annually by population register 2. Applying statistics of births and deaths (natural increase), and migration: i. registered vital statistics ii. vital statistics adjusted for incompleteness 3. Applying statistics of births and deaths (natural increase), but no account taken of migration: i. registered vital statistics ii. registered vital statistics	X		, indicating the "base data"				
2. METHOD OF ESTIMATION 2.A. TOTAL POPULATION Estimates of total population for a country as a whole may be constructed by a variety of means. Please indicate by a check mark "X" the method used in constructing the latest population estimate for (date): and the "method of adjustment" in accordance with the components of the code described in the "Technical Notes" of each Demographic Yearbook (pages 9-10 of the 1968 issue) and reported below: BASE DATA 1. Continuous population register 2. Complete census taken (date): i. population actually enumerated ii. population adjusted to take account of 3. Sample survey taken (date): 4. Partial census taken or partial registration (date): (please describe) 5. Non-censal count of (date): (describe method) METHOD OF TIME ADJUSTMENT 1. Base data secured annually by population register 2. Applying statistics of births and deaths (natural increase), and migration: i. registered vital statistics ii. vital statistics adjusted for incompleteness 3. Applying statistics of births and deaths (natural increase), but no account taken of migration: i. registered vital statistics ii. vital statistics adjusted for incompleteness iii. Vital statistics adjusted for incompleteness	x		, indicating the "base data"				
2. METHOD OF ESTIMATION 2A. TOTAL POPULATION Estimates of total population for a country as a whole may be constructed by a variety of means. Please indicate by a check mark "X" the method used in constructing the latest population estimate for (date): and the "method of adjustment" in accordance with the components of the code described in the "Technical Notes" of each Demographic Yearbook (pages 9-10 of the 1968 issue) and reported below: BASE DATA 1. Continuous population register 2. Complete census taken (date): i. population actually enumerated iii. population actually enumerated iii. population adjusted to take account of 3. Sample survey taken (date): 4. Partial census taken or partial registration (date): (please describe) 5. Non-censal count of (date): (describe method) 6. Conjectural estimate derived by means other than counting (describe method) METHOD OF TIME ADJUSTMENT 1. Base data secured annually by population register 2. Applying statistics of births and deaths (natural increase), and migration: i. registered vital statistics ii. vital statistics adjusted for incompleteness 3. Applying statistics of births and deaths (natural increase), but no account taken of migration: i. registered vital statistics ii. vital statistics adjusted for incompleteness ii. vital statistics adjusted for incompleteness ii. vital statistics adjusted for incompleteness	X		, indicating the "base data"				
2. METHOD OF ESTIMATION 2A. TOTAL POPULATION Estimates of total population for a country as a whole may be constructed by a variety of means. Please indicate by a check mark "X" the method used in constructing the latest population estimate for (date): and the "method of adjustment" in accordance with the components of the code described in the "Technical Notes" of each Demographic Yearbook (pages 9-10 of the 1968 issue) and reported below: BASE DATA 1. Continuous population register 2. Complete census taken (date): i. population actually enumerated ii. population adjusted to take account of 3. Sample survey taken (date): 4. Partial census taken or partial registration (date): (please describe) 5. Non-censal count of (date): (describe method) 6. Conjectural estimate derived by means other than counting (describe method) METHOD OF TIME ADJUSTMENT 1. Base data secured annually by population register 2. Applying statistics of births and deaths (natural increase), and migration: i. registered vital statistics ii. vital statistics adjusted for incompleteness 3. Applying statistics of births and deaths (natural increase), but no account taken of migration: i. registered vital statistics ii. vital statistics adjusted for incompleteness 4. Extrapolating mathematically from censuses taken (dates): Please give formula:	X		, indicating the "base data"				
2. METHOD OF ESTIMATION 2. TOTAL POPULATION Estimates of total population for a country as a whole may be constructed by a variety of means. Please indicate by a check mark "X" the method used in constructing the latest population estimate for (date): and the "method of adjustment" in accordance with the components of the code described in the "Technical Notes" of each Demographic Yearbook (pages 9-10 of the 1968 issue) and reported below: BASE DATA 1. Continuous population register 2. Complete census taken (date): i. population actually enumerated ii. population adjusted to take account of 3. Sample survey taken (date): 4. Partial census taken or partial registration (date): (please describe) 5. Non-censal count of (date): (describe method) METHOD OF TIME ADJUSTMENT 1. Base data secured annually by population register 2. Applying statistics of births and deaths (natural increase), and migration: 1. registered vital statistics ii. vital statistics adjusted for incompleteness 3. Applying statistics of births and deaths (natural increase), but no account taken of migration: 1. registered vital statistics ii. vital statistics adjusted for incompleteness iii. Vital statistics adjusted	X		, indicating the "base data"				
2. METHOD OF ESTIMATION 2. TOTAL POPULATION Estimates of total population for a country as a whole may be constructed by a variety of means. Please indicate by a check mark "X" the method used in constructing the latest population estimate for (date): and the "method of adjustment" in accordance with the components of the code described in the "Technical Notes" of each Demographic Yearbook (pages 9-10 of the 1968 issue) and reported below: BASE DATA 1. Continuous population register 2. Complete census taken (date): i. population actually enumerated ii. population adjusted to take account of 3. Sample survey taken (date): 4. Partial census taken or partial registration (date): (please describe) 5. Non-censal count of (date): (describe method) METHOD OF TIME ADJUSTMENT 1. Base data secured annually by population register 2. Applying stalistics of births and deaths (natural increase), and migration: i. registered vital statistics ii. vital statistics adjusted for incompleteness 3. Applying statistics of births and deaths (natural increase), but no account taken of migration: i. registered vital statistics ii. vital statistics adjusted for incompleteness 4. Extrapolating mathematically from censuses taken (dates): Please give formula:	X		, indicating the "base data"				

i. assumption with respect to mortality, fertility and					
migration					
ii. assumption with respect to mortality, fertility but					
no account taken of migration					
iii. other assumed rate					
	_				
If (i), (ii) or (iii) is checked, please give rate used and	_				
describe how obtained:					
No time adjustment (base figure held constant)

Other methods are also possible. Please indicate below the neithod used in making post-censal estimates of urban and rural, or					
4. By other means (describe below) DISPOSITION OF UNKNOWN AGE If frequency in unknown age category of table PE-2 and 4 is zero lease indicate below whether in the preparation of the estimates: 1. An age has been assigned to persons for whom age did not appear in the census or sample survey 2. Frequency in unknown age category has been distributed proportionately among known ages 3. The frequency of unknown age appearing the census or survey was zero 20. URBAN AND RURAL POPULATION, AND THE POPULATION OF CITIES Post-censal estimates of the urban and rural population, or the population of individual cities can be made in various ways. In some population estimates according to the registered balances of births, leaths, and changes of residence. In some countries, periodic surveys permit the up-dating of urban or city population estimates. In some countries, in relation to post-censal estimates of the total population, and the propulation of the percentage or urban in total, or city in urban, population. In some countries, urban and city population may be determined by an extrapolation of the percentage or urban in total, or city in urban, population. In some countries, urban and city population may be determined by an extrapolation of the percentage or urban in total, or city in urban, population. In some countries, urban and city population between the determined on the basis of rates of growth of urban or city population between the determined on the basis of rates of growth of urban or city population.					
sample survey 4. By other means (describe below) DISPOSITION OF UNKNOWN AGE If frequency in unknown age category of table PE-2 and 4 is zero olease indicate below whether in the preparation of the estimates: 1. An age has been assigned to persons for whom age did not appear in the census or sample survey 2. Frequency in unknown age category has been distributed proportionately among known ages 3. The frequency of unknown age appearing the census or survey was zero 2. C. URBAN AND RURAL POPULATION, AND THE POPULATION OF CITIES Post-censal estimates of the urban and rural population, or the population of individual cities can be made in various ways. In some pountries continuous population registers permit the up-dating of local population estimates according to the registered balances of births, feaths, and changes of residence. In some countries, in relation to post-censal estimates of the total population, estimates of urban or city population astimates. In some countries, in relation to post-censal estimates of the total population, estimates of urban, or city population may be determined by an extrapolation of the percentage or urban in total, or city in urban, population. In some countries, urban and city population may be determined on the basis of rates of growth of urban or city population between the population between the population. Described over a past period, by assuming such rates of growth to continue. Other methods are also possible. Please indicate below the method used in making post-censal estimates of urban and rural, or city population. Population registers 2. Surveys, other than a census					
sample survey 4. By other means (describe below) DISPOSITION OF UNKNOWN AGE If frequency in unknown age category of table PE-2 and 4 is zero lease indicate below whether in the preparation of the estimates: 1. An age has been assigned to persons for whom age did not appear in the census or sample survey 2. Frequency in unknown age category has been distributed proportionately among known ages 3. The frequency of unknown age appearing the census or survey was zero Post-censal estimates of the urban and rural population, or the population of individual cities can be made in various ways. In some countries continuous population registers permit the up-dating of local population estimates according to the registered balances of births, leaths, and changes of residence. In some countries, periodic surveys permit the up-dating of urban or city population estimates. In some countries, in relation to post-censal estimates of the total population, and the up-dating of urban or city population may be determined by an extrapolation of the percentage or urban in total, or city in urban, population. In some countries, urban and city population may be letermined on the basis of rates of growth of urban or city population may be letermined on the basis of rates of growth of urban or city population between the period of the percentage or urban in total, or city population between the period by an extrapolation of the percentage or urban in total, or city population between over a past period, by assuming such rates of growth to continue. Other methods are also possible. Please indicate below the method used in making post-censal estimates of urban and rural, or ity population. Population registers 2. Surveys, other than a census 3. Extrapolation of percentage					
sample survey 4. By other means (describe below) 4. By other means (describe below) DISPOSITION OF UNKNOWN AGE If frequency in unknown age category of table PE-2 and 4 is zero oblease indicate below whether in the preparation of the estimates: 1. An age has been assigned to persons for whom age did not appear in the census or sample survey 2. Frequency in unknown age category has been distributed proportionately among known ages 3. The frequency of unknown age appearing the census or survey was zero 2C. URBAN AND RURAL POPULATION, AND THE POPULATION OF CITIES Post-censal estimates of the urban and rural population, or the population of individual cities can be made in various ways. In some countries continuous population registers permit the up-dating of local population estimates according to the registered balances of births, deaths, and changes of residence. In some countries, perhaps, periodic surveys permit the up-dating of urban or city population estimates. In some countries, in relation to post-censal estimates of the total population, estimates of urban, or city population may be determined by an extrapolation of the percentage or urban in total, or city in urban, population. In some countries, urban and city population may be determined on the basis of rates of growth of urban or city population between the basis of rates of growth of urban or city population between the basis of rates of growth of urban or city population. Propulation of the percentage of urban and rural, or city population. Bestrapolation of percentage 1. Population registers 2. Surveys, other than a census 3. Extrapolation of percentage 4. Observed rate of growth, assumed					
sample survey 4. By other means (describe below) DISPOSITION OF UNKNOWN AGE If frequency in unknown age category of table PE-2 and 4 is zero olease indicate below whether in the preparation of the estimates: 1. An age has been assigned to persons for whom age did not appear in the census or sample survey 2. Frequency in unknown age category has been distributed proportionately among known ages 3. The frequency of unknown age appearing the census or survey was zero CC. URBAN AND RURAL POPULATION, AND THE POPULATION OF CITIES Post-censal estimates of the urban and rural population, or the oppulation of individual cities can be made in various ways. In some countries continuous population registers permit the up-dating of local opulation estimates according to the registered balances of births, leaths, and changes of residence. In some countries, perhaps, periodic surveys permit the up-dating of urban or city population estimates. In come countries, in relation to post-censal estimates of the total oppulation, estimates of urban, or city population may be determined oy an extrapolation of the percentage or urban in total, or city in rhan, population. In some countries, urban and city population may be letermined on the basis of rates of growth of urban or city population observed over a past period, by assuming such rates of growth to continue. Other methods are also possible. Please indicate below the method used in making post-censal estimates of urban and rural, or sity population. Population registers Surveys, other than a census Extrapolation of percentage Observed over a past period, by assuming such rates of growth to continue. Other methods are also possible. Please indicate below the method used in making post-censal estimates of urban and rural, or sity population. Population of percentage Observed over a for growth, assumed to continue					
sample survey 4. By other means (describe below) 4. By other means (describe below) DISPOSITION OF UNKNOWN AGE If frequency in unknown age category of table PE-2 and 4 is zero oblease indicate below whether in the preparation of the estimates: 1. An age has been assigned to persons for whom age did not appear in the census or sample survey 2. Frequency in unknown age category has been distributed proportionately among known ages 3. The frequency of unknown age appearing the census or survey was zero 2C. URBAN AND RURAL POPULATION, AND THE POPULATION OF CITIES Post-censal estimates of the urban and rural population, or the population of individual cities can be made in various ways. In some countries continuous population registers permit the up-dating of local population estimates according to the registered balances of births, deaths, and changes of residence. In some countries, perhaps, periodic surveys permit the up-dating of urban or city population estimates. In some countries, in relation to post-censal estimates of the total population, estimates of urban, or city population may be determined by an extrapolation of the percentage or urban in total, or city in urban, population. In some countries, urban and city population may be determined on the basis of rates of growth of urban or city population between the basis of rates of growth of urban or city population between the basis of rates of growth of urban or city population. Propulation of the percentage of urban and rural, or city population. Bestrapolation of percentage 1. Population registers 2. Surveys, other than a census 3. Extrapolation of percentage 4. Observed rate of growth, assumed					City
sample survey 4. By other means (describe below) DISPOSITION OF UNKNOWN AGE If frequency in unknown age category of table PE-2 and 4 is zero olease indicate below whether in the preparation of the estimates: 1. An age has been assigned to persons for whom age did not appear in the census or sample survey 2. Frequency in unknown age category has been distributed proportionately among known ages 3. The frequency of unknown age appearing the census or survey was zero 2. C. URBAN AND RURAL POPULATION, AND THE POPULATION OF CITIES Post-censal estimates of the urban and rural population, or the oppulation of individual cities can be made in various ways. In some countries continuous population registers permit the up-dating of local oppulation estimates according to the registered balances of births, feaths, and changes of residence. In some countries, perhaps, periodic surveys permit the up-dating of urban or city population estimates. In some countries, in relation to post-censal estimates of the total oppulation, estimates of urban, or city population may be determined on yan extrapolation of the percentage or urban in total, or city in urban, population. In some countries, urban and city population may be determined on the basis of rates of growth of urban or city population observed over a past period, by assuming such rates of growth to continue. Other methods are also possible. Please indicate below the method used in making post-censal estimates of urban and rural, or city population. 1. Population registers 2. Surveys, other than a census 3. Extrapolation of percentage 1. Observed over date of growth, assumed to continue.					
sample survey 4. By other means (describe below) DISPOSITION OF UNKNOWN AGE If frequency in unknown age category of table PE-2 and 4 is zero please indicate below whether in the preparation of the estimates: 1. An age has been assigned to persons for whom age did not appear in the census or sample survey 2. Frequency in unknown age category has been distributed proportionately among known ages 3. The frequency of unknown age appearing the census or survey was zero 2C. URBAN AND RURAL POPULATION, AND THE POPULATION OF CITIES Post-censal estimates of the urban and rural population, or the population of individual cities can be made in various ways. In some countries continuous population registers permit the up-dating of local population estimates according to the registered balances of births, deaths, and changes of residence. In some countries, perhaps, periodic surveys permit the up-dating of local population, estimates of urban, or city population astimates. In some countries, in relation to post-censal estimates of the total population, estimates of urban, or city population may be determined by an extrapolation of the percentage or urban in total, or city in urban, population. In some countries, urban and city population may be determined on the basis of rates of growth of urban or city population observed over a past period, by assuming such rates of growth to continue. Other methods are also possible. Please indicate below the method used in making post-censal estimates of urban and rural, or city population. 1. Population registers 2. Surveys, other than a census 3. Extrapolation of percentage 4. Observed rate of growth, assumed to continue.					

BIBLIOGRAPHY OF DEMOGRAPHIC STATISTICS			
In order to bring up to date the bibliographical information you kindly			
supplied with last year's questionnaire, please list below publication			
which have become available since that time or are to be issued in the			
near future which contain results of your latest population census or			
survey, and current statistics on population estimates, vital statistics			
and internation migration.			
This information is being requested for the purpose of compiling and			
maintaining a current bibliography of demographic statistics. The			
citations should, therefore, be in a form suitable for reference			
purposes, i.e., the TITLE, ISSUING AGENCY or AUTHOR, PLACE, DATE OF			
PUBLICATION and NUMBER OF PAGES should be give.			
Example:			
Demographic Yearbook, 1967. United Nations, New York, 1968, 778 pp.
