### Quality of vital statistics obtained from civil registration

#### I. Basis of tabulation

<table>
<thead>
<tr>
<th></th>
<th>Live births</th>
<th>Deaths</th>
<th>Infant deaths</th>
<th>Late foetal deaths</th>
<th>Marriages</th>
<th>Divorces</th>
</tr>
</thead>
<tbody>
<tr>
<td>Present basis of tabulation:</td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>

<tr>
<td>- date of occurrence</td>
<td>x</td>
<td>x</td>
<td>x</td>
<td>x</td>
<td>x</td>
<td>x</td>
</tr>
<tr>
<td>- date of registration</td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>How long has the present basis of tabulation been used?</td>
<td>1867</td>
<td>1867</td>
<td>1867</td>
<td>1867</td>
<td>1867</td>
<td>1867</td>
</tr>
</tbody>
</table>

#### II. Estimated completeness of registration

<table>
<thead>
<tr>
<th></th>
<th>Live births</th>
<th>Deaths</th>
<th>Infant deaths</th>
<th>Late foetal deaths</th>
<th>Marriages</th>
<th>Divorces</th>
</tr>
</thead>
<tbody>
<tr>
<td>90 per cent or more</td>
<td>x</td>
<td>x</td>
<td>x</td>
<td>x</td>
<td>x</td>
<td>x</td>
</tr>
<tr>
<td>75-89 per cent</td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>50-74 per cent</td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>Under 50 per cent</td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

Please specify:

- (a) Year(s) to which completeness estimate refers
- (b) Basis of completeness estimate
  - Demographic analysis
  - Dual record check: x x x x x x
  - Questions in population census
  - Questions in sample surveys
  - Other (specify)
  - No evaluation

Please include any reports describing completeness of registration and methods used in arriving at estimated completeness:

### Quality of vital statistics obtained from other sources

#### Basis of vital statistics estimates is

- Population censuses (date)
- Sample surveys
- Population registers
- Dual record systems
- Other (specify)

Please include any reports describing the methods used for estimates of vital statistics based on other sources than civil registration:
Table 1.1 - Urban / rural definitions
Please state the definition used for urban area and the period of time it has been in use:
Basic territorial and organizational unit with urban legal status in the administrative system.
Please state the definition used for rural area and the period of time it has been in use:
Basic territorial and organizational unit with rural legal status in the administrative system.

Table 1.6 - Grounds for legally induced abortion
Please mark with an "X" the applicable options

X a) Continuance of pregnancy would involve risk to the life of the pregnant woman greater than if the pregnancy were terminated.
X b) Continuance of pregnancy would involve risk of injury to the physical health of the pregnant woman greater than if pregnancy were terminated.
X c) Continuance of pregnancy would involve risk of injury to the mental health of the pregnant woman greater than if pregnancy were terminated.
X d) Continuance of pregnancy would involve risk of injury to the mental or physical health of the pregnant woman greater than if pregnancy were terminated.
X e) There is a substantial risk that if the child were born it would suffer from such physical or mental abnormalities as to be seriously handicapped.
X f) Other, please specify. If the pregnancy is the consequence of a crime or if the female is in a grave crisis situation.

Tables 14a, 14b, 15a and 15b - Life tables
Do the life tables refer to de Facto population or de Jure population? Tables refer to de jure population, more exactly to registered resident population.
Was any method used to smoothen the life table? Which one? Between ages 4-14 4th degree polynomial fitted with OLS, for ages 15-75 Karup-King osculatory interpolation has been used. Both applied to probabilities of dying.
Was any specific method used to close the life table at older ages (e.g., Gompertz, Makeham, etc)? Which one? For ages 76 and over Gompertz-Makeham distribution has been fitted.
If any model life table or relational model was used to derive the life table (e.g., Coale-Demeny West, UN South Asian pattern), what model was used? None
Please mark with an "X" the applicable options
X a) Unadjusted vital registration deaths

Tables refer to de jure population, more exactly to registered resident population.
What source of data was used to compute the life tables?
X a) Unadjusted vital registration deaths
b) Adjusted vital registration deaths
c) Deaths census information
d) Life expectancy at birth
e) Under-five mortality
f) Infant mortality

Table 22 Minimum legal marriage age
Please specify the minimum legal age at which marriage can take place:
Men | Woman
---|---
a) With parental consent | 16 | 16
b) Without parental consent | 16 | 18
