- 27 To ensure confidentiality, the values, including totals are randomly rounded either up or down to a multiple of '5' or '10.' As a result, when these data are summed or grouped, the total value may not match the individual values since totals and sub-totals are independently rounded. Similarly, percentages, which are calculated on rounded data, may not necessarily add up to 100%.
- 28 Estimates adjusted for census net undercoverage (including adjustment for incompletely enumerated Indian reserves).

Adjustments are done by applying weights calculated (to 4 decimal places) for each sex and age group to the enumerated population when the tabulations are produced. Minor discrepancies between totals and the sum of the component parts of a table and minor discrepancies between the totals across tables are due to rounding after weights are applied.
