COVID-19 IS AFFECTING WOMEN AND MEN DIFFERENTLY

Women above age 20 appear to be more likely to be diagnosed with COVID-19, while men in all age groups under age 80 are more likely to die from it.

- Most cases were among women
- Most deaths were among men
- At ages 20–80

WOMEN ARE ON THE FRONT LINES OF FIGHTING THE CORONAVIRUS

Women account for 70% of health and social workers

THE “GLASS CEILING” STILL Keeps WOMEN OUT OF STRATEGIC FUNCTIONS

The "glass ceiling" still keeps women in support management positions rather than allowing them access to strategic management functions.

- 28% of managers were women
- 18% of chief executive officers were women

GENDER DISPARITIES PERSIST IN THE FIELDS OF STUDY AND WORK

In tertiary education, enrolment is increasing faster for women than for men. However, gender disparities persist in the fields of study chosen by women and men. Women continue to be underrepresented among graduates in the STEM fields and in ICT jobs.

- 35% of STEM students are women
- 20% of ICT professionals are women

HEAVIER LOADS OF UNPAID WORK KEEP WOMEN OUT OF THE LABOUR MARKET

Family responsibilities and the unequal distribution of unpaid domestic and care work between women and men add to women’s daily work and may prevent them from participating in the labour market.
