

Table 6

Table 6 presents occupied housing units by type of housing unit, type of toilet and urban/rural location for the latest available year between 1995 and 2010.

Definitions

A *conventional dwelling* is a room or suite of rooms and its accessories in a permanent building or structurally separated part thereof which, by the way it has been built, rebuilt or converted, is intended for habitation by one household and is not, at the time of the census, used wholly for other purposes. It should have a separate access to a street (direct or via a garden or grounds) or to a common space within the building (staircase, passage, gallery and so on). Therefore, there are four essential features of a conventional dwelling:

- (a) It is a room or suite of rooms;
- (b) It is located in a permanent building;
- (c) It has separate access to a street or to a common space;
- (d) It was intended to be occupied by one household.

A *toilet* may be defined as an installation for the disposal of human excreta. A flush toilet is an installation provided with piped water that permits humans to discharge their wastes and from which the wastes are flushed by water. The unit of enumeration for this topic is a housing unit.
