GENERAL NOTES - NOTES GENERALES

Rates are the number of total or legitimate live births in each birth order and age group per 1 000 female or married female population in the specified age group. For method of rate computation see Technical Notes for this table. Unless otherwise specified, live-birth order is based on number of previous live births to the mother. Births of unknown legitimacy are considered illegitimate. For method of evaluation and limitations of data, see Technical Notes for this table. — Les taux représentent les nombres total de naissances vivantes ou de naissances vivantes légitimes de chaque rang dans chaque groupe d'âge pour 1 000 femmes ou femmes mariées de ce groupe de âge. Pour le mode de calcul des taux, voir Notes techniques pour ce tableau. Sauf indication contraire, le rang de naissance est déterminé par le nombre d'enfants vivants que la mère a déjà mis au monde. Les naissances dont la légitimité n'a pas été établie sont considérées comme illégitimes. Pour la méthode d'évaluation et les insuffisances des données voir, Notes techniques pour ce tableau.

Italics: data from civil registers which are incomplete or of unknown completeness. — Italiques: données incomplètes ou dont le degré d'exactitude n'est pas connu provenant des registres de l'état civil.
