

Table 5

Table 5 presents the number of occupied housing units by type, main source of drinking water, urban/rural location and cities for the latest available year between 1995 and 2010.

Definitions

A *conventional dwelling* is a room or suite of rooms and its accessories in a permanent building or structurally separated part thereof which, by the way it has been built, rebuilt or converted, is intended for habitation by one household and is not, used wholly for other purposes. It should have a separate access to a street (direct or via a garden or grounds) or to a common space within the building (staircase, passage, gallery and so on). Therefore, there are four essential features of a conventional dwelling:

- (a) It is a room or suite of rooms;
- (b) It is located in a permanent building;
- (c) It has separate access to a street or to a common space;
- (d) It was intended to be occupied by one household.
