

Post Enumeration Surveys

Operational guidelines

Technical Report

The objective of the Technical Report is to provide operational guidelines for the preparation and implementation of a post enumeration survey. It defines the PES and enumerates its objectives. In addition, the Technical Report covers elements of: sample design; questionnaire design; planning and implementation of a PES; matching; field reconciliation; the Dual System of Estimation (DSE); tabulations; the evaluation of content error. The Technical Report also serves as a reference document for related workshops organized by the United Nations Statistics Division.
