Census products to be released in October and November 2012

Product	Description
Census 2011 in Brief	This will be an A6 booklet which will be an easy-to-use product consisting of tables and graphs at national and provincial levels. The product will provide information at individual and household levels. It will be made available in print and electronic formats.
Census 2011 fact sheets	These will be designed to be quick-reference products of not more than two pages in order to assist in the use and interpretation of census data.
Key Results Pamphlet	This will be an A6 pamphlet which will highlight some of the key results.
Highlights of Key Results	This report will provide highlights of the methodologies and processes that were used for Census 2011: Planning, listing, enumeration, data processing, editing, and adjusting for the undercount. The report will also highlight key results.
Basic Municipal Release	This will be a ring-bound book containing Census 2011 findings for each local municipality. Person and household information for selected groupings will be summarised for each municipality.
Provinces at a glance	This will be an in-depth publication consisting of nine provincial reports presented in the form of tables and graphs. This report will show the comparison between Census '96, Census 2001 and Census 2011 results.
Interactive web products	Users will be able to access and manipulate Census 2011 data via StatsOnline in PX-Web. They will also be able to extract tables on topics of interest at national, provincial, district council, and municipality levels.
Community Profiles (SuperTable and SuperWEB)	This will be a package of different CDs containing 12 summarised databases on certain topics. SuperTable, which will enable users to create their own cross-tabulations and view the results easily as charts and maps on different geographical hierarchies. This product will also be available on StatsOnline on the web.
Interactive Graphs	This facility allows users to view census data as animated graphs. This tool can be used to access indicators from census data in interactive graph formats.
Digital Census Atlas (Web-based)	The 2012 Digital Census Atlas dissemination product is based on interactive mapping, where the user selects a variable and level of geography for rendering through a web-based interface. The product will have four main components, namely Overview maps, Feature maps, Comparative maps and Reporting.
A0 Maps	The A0 maps are to be based on the thematic representation of key census variables at national, provincial and municipality levels.
Mobi sites	These will provide easy and interactive interaction with statistical data to deliver Census 2011 results to everyone, everywhere.
Roambi	Roambi is targeted at users who prefer a pre-built package of information (data, graphics and commentary).
Cartograms	These are maps in which a thematic mapping variable, e.g. population size, is substituted for land area.
GapMinder	This is a tool that allows users to present a large amount of data visually in moving, interactive graphs.

Census products to be released in 2013	
Product	**Description**
Thematic report	a) Monograph on Population Structure and Composition in South Africa The monograph will provide a detailed description of the distribution of population by age and sex. The data will be disaggregated at national and provincial levels. Different techniques for evaluating and analysing data on age and sex compositions will be employed. This will also include quality assessment issues regarding the data.
Thematic report	b) Monograph on Mortality The monograph will give an overview of trends and patterns in the number of deaths in the country. The analysis will include demographic and socioeconomic characteristics of the household where the deceased was a member. Demographic techniques (direct and indirect) will be employed to estimate mortality indicators throughout the country. This will also include quality assessment issues regarding the mortality data.
Thematic report	c) Monograph on Fertility The monograph will focus on levels, trends and patterns of fertility. Different methods (direct and indirect) of fertility estimation will be used to determine fertility patterns in the country. This will also include quality assessment issues regarding fertility data.
Thematic report	d) Monograph on Migration The monograph will indicate the patterns, flows and trends of interprovincial migration in the country. The analysis will include demographic and socioeconomic differentials of immigrants and emigrants. The use of migration methods will help in the estimation of migrants.
Thematic report	e) Monograph on Education The monograph will highlight the education and literacy status of South Africans.
Thematic report	f) Monograph on Household Services The monograph will highlight issues regarding the provision of basic services – indicators as well as differentials. The report will be able to point out specific areas which are not meeting requirements in terms of service delivery.
Thematic report	g) Monograph on Labour Market The monograph will harness the population that is currently economically active and that is not in the labour market. Other questions will allow the breakdown of the employed persons by variables such as occupation, industry and status of employment.
NesSTAR	This data repository allows users to browse, analyse, tabulate and download census datasets and metadata in various formats. Datasets can be downloaded in ASCII, STATA, SPSS, SAS formats. This will be available on StatsOnline on the web.
10 % Sample and metadata	A CD containing the unit records in ASCII format plus a Readme file, metadata, record file, code-list and questionnaire.
CD for school learners	Interactive-rich graphics version that aims to display census data in cartoon format.
