COUNTRY PRACTICE IN ENERGY STATISTICS

Topic/Statistics:
Consumption of energy products

Institution/Organization: Istat
Country: Italy
Date: 03/04/2012

Abstract

Write a short abstract of the statistics, and try to limit it to one page. The purpose of the abstract is to give the reader a general overview of the statistics/topic. It should therefore include a brief overview of the background and the purpose of the statistics, the population, the sample (if relevant), the main data sources, and the main users of the statistics. The abstract should also mention what is the most important contribution or issue addressed in the country practice (e.g. the practice deals with challenges of using administrative data, using of estimation, quality control, etc.). If there are other elements that are considered important, please feel free to include them in the abstract.

Keep in mind that all relevant aspects of the statistical production will be covered in more detail under the different chapters in the template. Therefore, the abstract should be short and focused on the key elements. What the most important elements are can vary from statistics to statistics, but as a help to write an abstract you can use the table below. The table can either replace a text or can be filled out in addition to writing a short text.

Up to 2010 (data reference year) energy data were collected annually, and disseminated, by PRODCOM survey; the main objective was the expenditure for energy products in manufacturing enterprises. Since 2011 the data will be provided by a specific survey. The scope is established by the EC Regulation n. 1099/2008 amended by the Commission Regulation (EU) n.844/2010 and it is different from the previous one: the estimation of energy final consumption (not the expenditure) by the business. At the moment the survey is under implementation and it is a pilot one. So, not all the decisions about the “a regime” survey are taken and the required information is provided only related to the one shot planned survey. The survey characteristics could change in the next years.

1. General information

1.1. Name of the statistics/topic
The statistics/topic could either be a specific energy statistics (e.g. electricity production) or a topic within energy statistics (e.g. energy balances). For more information, please see Section III of the Instructions.

| energy final consumption in business |

1.2. History and purpose
State when the statistics were first published.

| 2013 |

Describe briefly the main purpose of producing the statistics and why it is relevant.

To address the EC and EU Regulation; to provide energy statistics comparable in the Union, to complement the information on business system. The statistics will be the main source of information on the topics.

1.3. Reference period
State the time period the data are collected for.

| Year 2011 |

1.4. Frequency
Specify how often the statistics are disseminated (e.g. annually, monthly, quarterly, etc.). If the statistics are not produced at regular intervals, state at what times they have been produced in the past and the main reasons behind the irregularities.

| Annually |

1.5. Dissemination
Describe how the statistics are published (e.g. printed publications, online publications, online databases, etc.). If applicable, include the web address to the main website of the statistics.

| Online publications |

1.6. Regional level
State the lowest geographical level (e.g. administrative regions, municipalities, etc.) for which the statistics are made available to the public.

| Macro- regions (first level NUTS regions where possible) |

1.7. Main users
Identify the key users of the data and the main applications. Include both internal and external users, and if possible try to distinguish between end users and others.
End users: European Comission, Ministry for economic development; other users: Agency for energy (ENEA), other Istat Departments

1.8. Responsible authority

Write the name of the institution and department/office with the main responsibility for disseminating the statistics (e.g.: Statistics Norway, Department of Economics, Energy and the Environment).

National Statistical Institute, Department for National Accounts and Business statistics

1.9. Legal basis and legally binding commitments

State the national legal basis for the data collection. Include a complete reference to the constitutional basis, and web address to an electronic version (e.g.: The Statistics Act of 16 June 1989 No. 54, §§2-2 and 2-3, http://www.ssb.no/english/about_ssb/statlaw/forskrift_en.html).

Programma Statistico Nazionale 20111-2013 code IST-02511

If the data collection is not based on a legal basis, give a short description of other agreements or volunteer arrangements.

If applicable, give reference to national and international commitments that are legally binding (e.g. EU statistical legal acts).

1.10. Resource requirements

Specify how the production of the statistics is financed (e.g. over the ordinary budget, project based support, financial support from other institutions or organization). If applicable, state the contracting entity (e.g.: Ministry, EU Commission, OECD). A contracting entity is any entity which is ordering a survey or the compilation of a statistics, and paying for it.

Financial support by the Agency for Energy (ENEA)

Specify the resource requirements for producing the statistics (e.g. man-labour days, number of workers involved in the statistical production process of the statistics/topic in question).

Number of persons involved: ISTAT: full time 2 researchers - part time 2 researchers; 2 computer experts, 2 staff employees; Moreover a working group involving experts from other institutions were formed: 13 people (including 5 above mentioned)

1.11. International reporting

List any international organizations and names of reporting schemes that the statistics are reported to. If available, also include the website where the reported data are published (e.g. International Energy Agency, Monthly Oil Statistics, UNSD, etc.).

Survey results will be used to meet the International Energy Agency requirements
2. Statistical concepts, methodology, variables and classifications

2.1. Scope
Describe the scope of the statistics (e.g. the statistics cover supply and use of all energy products in Norway, classified according to International Standard Industrial Classification of All Economic Activities – ISIC).

Statistics cover the final consumption of different energy products by enterprises in Industry (energy industries excluded), Transport, Public and commercial services.

2.2. Definitions of main concepts and variables
Describe the main concepts (e.g.: territory principle, resident principle, net calorific value, gross calorific value).

Definitions, concepts and variables given by the EC Regulation n. 1099/2008, Commission Regulation (EU) n. 844/2010 were used (CHECK).

Describe the main variables (e.g. how are the different energy products defined in the statistics? How are production, intermediate consumption, final consumption, transformation, feed stock, the energy sector, etc. defined?).

2.3. Measurement units
Describe in what unit the data is collected (e.g. physical unit (m3, metric tons), monetary unit (basic prices, market prices)). Describe in what unit the data is presented. Describe if the calorific values are collected (e.g. on a net vs. gross basis) and how they are used.

If applicable, describe the density of the energy product(s) and the estimated thermal efficiency coefficients of different energy products and consumer groups or by appliance. Thermal efficiency coefficient indicates the share of the energy products which is actually usable for end consumption. Descriptions of density and thermal efficiency coefficient could alternatively be put in an annex.

MWh, kWhGWh, GJ, tons, standard m3, liters, (kJ/kg); expenditure excluding TVA

2.4. Classification scheme
Include references to relevant international and national standard classifications. If national, give a brief description of the standards. If available, include web addresses to the electronic version of the standards.

NACE rev 2

2.5. Data sources
Give an overview of the different data sources used in the collection and compilation of the statistics/topic (e.g. household survey, enterprise/establishment survey, administrative data/registers, foreign trade statistics, production statistics and other primary/secondary data sources).
Examples of administrative sources/registers are: business register for enterprises and establishments, population register, land register, housing and building registers, tax registers, international trade registers, etc.

2.6. Population

Describe the entire group of units which is the focus of the statistics (the population).

| Population: the business in Industry (except the energy sector), Transportation, and Public and commercial services with more than 3 employed persons. |

Specify the following statistical units:

- Reporting unit
- Observational unit
- Analytical unit

Examples of different kind of statistical units include: enterprise, enterprise group, kind-of-activity unit (KAU), local unit, establishment, homogeneous unit of production.

In most cases the reporting unit, observational unit and analytical unit are identical, but there are examples where this is not the case. In electricity statistics, you may find that energy companies (the reporting unit) provide data about different consumers like the individual household or manufacturing company (the observational unit). The analytical unit may be a group of energy consumers, defined by the ISIC.

| Reporting unit: enterprise. Observational unit: enterprise (optionally data can be reported for local unit). Analytical unit: enterprise |

2.7. Sampling frame and sample characteristics

Describe the type of sampling frame used in the collection and compilation of the statistics (e.g. list, area or multiple frames). A sampling frame is the source material or device from which a sample is drawn. Note that the sampling frame might differ from the population.

| Italian Business Register (ASIA) |

For each survey(s) used for the compilation of the statistics, specify the sampling design (e.g. random, stratified, etc.). Describe the routines employed for updating the sample. Include information about the sample size, and discuss to what extent the sample covers the population (e.g. energy consumption in the sample compared to total energy use by the population).

Note that chapter 2.7: Sample frame and sample characteristics may overlap with chapter 3.4: Grossing up procedures.

| Sampling design: One stage stratified simple random sampling |
| Business Register: ASIA Register, N ~ 4,5M units, year of reference 2010. Auxiliary variables: number of persons employed, turnover. |
| Sample size: n ~ 45,000 units |
| Stratification criteria: NACE Rev. 2 regroupings according to the Regulation; NUTS Level 1; Number of persons employed size class. The size threshold varies among classes. The small enterprises are not surveyed at all |
2.8. Collection method
For each survey used for the compilation of the statistics/topic, describe how the data are collected (e.g. face-to-face, telephone, self-administered, paper and internet-based questionnaires, or administrative data and registers).

Web survey

2.9. Survey participation/response rate
For each survey used for the compilation of the statistics/topic, specify the average response rate, or refer to response rates for specific surveys conducted.

Not yet known

3. The statistical production process

3.1. Data capture and storage
Describe how the data is captured and stored (e.g. if the respondent replies using Internet-based questionnaire, the received data are electronically transferred to the production database. Paper questionnaire responses are keyed manually to the production database).

Data from respondents are automatically stored in an Oracle Data base

3.2. Data editing
Describe the regular routines employed for detecting and correcting errors. This may include:

- Manual routines for detecting and correcting errors
- Automatic error-detection (and correction)
- Micro- and macro editing procedures
- Data validation procedures
- Outlier identification
- Processes and sources used for quality controls

Manual and automatic procedure (depending on the size of business) to detect and correct the data

3.3. Imputation
Describe the principles for imputation and the assumptions that these principles are based on.

Note that this chapter may overlap with chapter 3.2: Data editing and chapter 5.2: Accuracy

To be decided

3.4. Grossing up procedures
Describe how the population is divided into strata and what statistical models the estimations in the strata are based on. Describe how sub-indices are combined into aggregate indices and how uncertainty is estimated.
Stratification criteria: NACE Rev. 2 regroupings according to the Regulation; NUTS Level 1; Number of persons employed size class. The size threshold varies among classes. The small enterprises are not surveyed at all

3.5. Analytical methods
Give a description of any analytical methods used to adjust the data (e.g.: seasonal adjustment and temperature adjustment). A more detailed description of the analytical method can also be included as an annex.
No adjustment

4. Dissemination

4.1. Publications and additional documentation
Describe the form of dissemination of the statistics/topics in question (e.g. printed publications, website, etc.). Please provide relevant website link(s) if available.
To be decided

Give a complete reference to publicly available statistics databases where data from the statistics can be extracted. Include web addresses if available online.
To be decided

Indicate whether you charge users for access to the statistics at any level of aggregation.
To be decided

4.2. Revisions
Describe the current revision policies. E.g.: Is historical data revised when new methodology, new definitions, new classifications etc. are taken into use? Is the data continuously revised, or is the data revised at certain points in times (e.g. every third year, annually, etc.)?
To be decided

If applicable, describe any major conceptual or methodological revisions that have been carried out for this statistic/topic in the past.

4.3. Microdata
Describe how microdata are stored.
Oracle database

Specify if microdata are available for scientific and/or public use. If so, describe under what conditions these are made available.
To be decided
4.4. Confidentiality

Describe the legal authority that regulates confidentiality, and what restrictions are applied to the publication of the statistics.

| Statistical Law (Legislative Decree no. 322/89), Personal data protection code (Legislative Decree no. 196/2003), including the Code of conduct and professional practice. Confidentiality rules for dissemination: to be decided (the base rule is the “threshold rule” with threshold =3). |

Describe the criteria used to suppress sensitive data in statistical tables (cell suppression).

Describe how confidential data are handled.

| According to the law requirements |

Describe any confidentiality standards that go beyond what is legally required.

5. Quality

5.1. Relevance

State to which degree the statistical information meet the real needs of clients/users.

| Info not available at the moment |

5.2. Accuracy

State the closeness of computations or estimates to the exact or true values that the statistics were intended to measure.

| Info not available at the moment |

Measurement and processing errors

Discuss the measurement and processing errors that are relevant for the statistics. Try as far as possible to give an estimation of the size and scope of the errors.

| Info not available at the moment |

Non-response errors

State the size of the unit non-response and the item non-response, distributed by important variables in the population (e.g. region, industry). Consider if the non-response errors are systematic, and if so, describe the methods used to correct it. Indicate whether the effects of correcting non-response errors on the results have been analysed, and, if so, describe them.

| Info not available at the moment |

Sampling errors

Discuss the size of the sampling errors. Compare the population and sample with regards to important properties (e.g. coefficient of variance).

| Info not available at the moment |

Other sources of error
Discuss other sources of errors that might be relevant for the statistics. E.g.: Model assumption errors, coverage errors

Info not available at the moment

5.3. Timeliness and punctuality
Specify the time between the end of the reference period and publication. If the statistics are published both as preliminary and final figures, specify the time between publication of preliminary and final figures. You should also point out whether the publication date is set according to certain rules (e.g. advance release calendar, a specific day or prior to other publications).

not applicable

Point out if there have been any major discrepancies between the planned publication date and the actual publication date in recent years. If so, state the length of this discrepancy and its cause.

not applicable

5.4. Accessibility
Describe how easily accessible the statistics are. In particular, is there an advance release calendar to inform the users about when and where the data will be available and how to access them?

Are metadata and other user support services easily available? Are there particular groups that don’t have access to the published statistics (e.g.: visually disadvantaged)?

not applicable

5.5. Comparability
Discuss the comparability of the statistics over time, geographical areas and other domains.

Comparability over time
Discuss comparability over time and include information about whether there have been any breaks in the time series of the statistics and why. Also describe any major changes in the statistical methodology that may have had an impact on comparability over time.

not applicable

Comparability over region
Discuss comparability over geographical areas, and include information about whether the statistics are comparable to relevant statistics published by other countries and/or international organisations.

not applicable

Comparability over other domains
Discuss comparability over domains, and include information about whether the statistics are comparable between different industries, different types of households etc.

not applicable
5.6. Coherence and consistency
Discuss the coherence/consistency between preliminary and final figures.
not applicable

Discuss the coherence/consistency between monthly, quarterly or yearly statistics within the same subject area. Can the results of different frequencies for the same reference period be combined in a reliable manner?
not applicable

Discuss the coherence/consistency with other related statistics (also those produced by other institutions/organisations on the same subject).
not applicable

6. Future plans
Are there any current or emerging issues that will need to be addressed in the future? These could include gaps in collection, timeliness issues, data quality concerns, funding risks, confidentiality concerns, simplifications to reduce respondents’ burden etc.?
Annexes

Illustrations and flowcharts
Illustrations and flowcharts are useful to summarize information and to get a better overview of the statistical production process. Illustrations and flowcharts can either be places in annexes or be included under relevant paragraphs in the template.

E.g.:
• A conceptual flowchart which illustrates the flow of data in the production of the statistics.
• A flowchart which illustrates the main tasks in the production process and the dependency between them.

Time schedule
Include a time schedule for the different phases of the statistical production process. The statistical production process may be divided into the following phases. Phase 1-3 may only be relevant for when a new statistics/survey is set up.

1. **Clarify needs** (e.g. map users needs, identify data sources)
2. **Plan and design** (e.g. plan and design population, sample size, how to analyze and edit data)
3. **Build** (e.g. build and maintain production system, test production system)
4. **Collect** (e.g. Establish a frame, draw the sample, collect data)
5. **Edit** (e.g. identify and code micro data, edit data, imputation)
6. **Analyse** (e.g. quality evaluation, interpret, analyse)
7. **Disseminate** (e.g. publish data, user contact)

Questionnaires
Include the complete questionnaire(s)/survey form(s) used

Example of publication tables
Include an example of a typical table published for the statistics. Include web addresses if available online.

Detailed description on analytical methods
If relevant, a detailed description of analytical methods used in the statistical production (like seasonal adjustment, temperature adjustment etc.) may be described in an annex. A short description can also be included in chapter 3.5: Analytical methods or under other suitable chapters.
