ESWATINI, ETHIOPIA, UGANDA

Data needed to assess energy situation

- Different products, particularly wood and charcoal, but as well biogas and other biomass.
- For different part of supply chain (production, transformation, use).
- Data by sector (households, services, industry).
- Particularly difficult to collect data from informal sector (services) in cities.
- Data on type of wood, moisture content.
- Efficiency of charcoal production.

Impact

- Gender/children, productivity:
 - Time spend on fuelwood collection, cooking
- Health
 - Type of stove, fuel used
 - Diseases
- Economic
 - Household expenditure on energy
