de l'énergie

2010 Energy Statistics Yearbook Annuaire des statistiques de l'énergie

The Department of Economic and Social Affairs of the United Nations Secretariat is a vital interface between global policies in the economic, social and environmental spheres and national action. The Department works in three main interlinked areas: (i) it compiles, generates and analyses a wide range of economic, social and environmental data and information on which States Members of the United Nations draw to review common problems and to take stock of policy options; (ii) it facilitates the negotiations of Member States in many intergovernmental bodies on joint courses of action to address ongoing or emerging global challenges; and (iii) it advises interested Governments on the ways and means of translating policy frameworks developed in United Nations conferences and summits into programmes at the country level and, through technical assistance, helps build national capacities.

Le Département des affaires économiques et sociales du Secrétariat de l'Organisation des Nations Unies sert de relais entre les orientations arrêtées au niveau international dans les domaines économiques, sociaux et environnementaux et les politiques exécutées à l'échelon national. Il intervient dans trois grands domaines liés les uns aux autres : i) il compile, produit et analyse une vaste gamme de données et d'éléments d'information sur des questions économiques, sociales et environnementales dont les États Membres de l'Organisation se servent pour examiner des problèmes communs et évaluer les options qui s'offrent à eux; ii) il facilite les négociations entre les États Membres dans de nombreux organes intergouvernementaux sur les orientations à suivre de façon collective afin de faire face aux problèmes mondiaux existants ou en voie d'apparition; iii) il conseille les gouvernements intéressés sur la façon de transposer les orientations politiques arrêtées à l'occasion des conférences et sommets des Nations Unies en programmes exécutables au niveau national et aide à renforcer les capacités nationales au moyen de programmes d'assistance technique.

NOTE

Symbols of United Nations documents are composed of capital letters combined with figures. Mention of such a symbol indicates reference to a United Nations document.

General Disclaimer

The designations employed and the presentation of material in this publication do not imply the expression of any opinion whatsoever on the part of the Secretariat of the United Nations concerning the legal status of any country, territory, city or area, or of its authorities, or concerning the delimitation of its frontiers or boundaries.

Where the designation "country or area" appears in the headings of tables, it covers countries, territories, cities or areas. In prior issues of this publication, where the designation "country" appears in the headings of tables, it should be interpreted to cover countries, territories, cities or areas.

NOTE

Les cotes des documents de l'Organisation des Nations Unies se composent de lettres majuscules et de chiffres. La simple mention d'une cote dans un texte signifie qu'il s'agit d'un document de l'Organisation.

Déni de responsabilité

Les appellations employées dans cette publication et la présentation des données qui y figurent n'impliquent de la part du Secrétariat de l'Organisation des Nations Unies aucune prise de position quant au statut juridique des pays, territoires, villes ou zones, ou de leurs autorités, ni quant au tracé de leurs frontières ou limites.

L'appellation "pays ou zone" figurant dans les titres des rubriques des tableaux désigne des pays, des territoires, des villes ou des zones. L'appellation "pays" figurant dans certaines rubriques des tableaux de numéros antérieurs de cette publication doit être interprétée comme désignant des pays, des territoires, des villes ou des zones.

TABLES

Conversion factors

| | |
|---|-------|
| I. Coal equivalent coefficients | xxxii |
| II. Specific gravities of crude petroleum | xli |
| III. Specific gravities of petroleum products | xlili |
| IV. Selected conversion factors for crude petroleum and petroleum products | xliv |
| V. Heat values of gases | xliv |

Commercial energy

| | |
|---|-----|
| 1. Production, trade and consumption - Coal equivalent | 2 |
| 2. Production, trade and consumption - Oil equivalent | 39 |
| 3. Production, trade and consumption - Terajoules | 75 |
| 4. Total energy requirement - Terajoules | 110 |

Solid Fuels

| | |
|--|-----|
| 5. Production, trade and consumption of solid fuels - coal equivalent | 129 |
| 6. Production, trade and consumption of hard coal | 140 |
| 7. International trade of hard coal (principal importers and exporters); 2009 and 2010 | 150 |
| 8. Production, trade and consumption of lignite and sub-bituminous coal | 154 |
| 9. Production, trade and consumption of coke | 160 |
| 10. Production, trade and consumption of hard coal briquettes | 169 |
| 11. Production, trade and consumption of briquettes of lignite and peat | 172 |
| 12. Production, trade and consumption of peat | 175 |
| 13. Selected series of statistics on renewables and wastes | 179 |

TABLEAUX

Facteurs de conversion

| | |
|---|-------|
| I. Facteurs de conversion en équivalent houille | xxxii |
| II. Densités du pétrole brut | xli |
| III. Densités des produits pétroliers | xlili |
| IV. Quelques facteurs de conversion pour le pétrole et les produits pétroliers | xliv |
| V. Pouvoirs calorifiques des gaz | xliv |

Energie commerciale

| | |
|---|-----|
| 1. Production, commerce et consommation - Equivalent houille | 2 |
| 2. Production, commerce et consommation - Equivalent pétrole | 39 |
| 3. Production, commerce et consommation - Térajoules | 75 |
| 4. Montant total des besoins énergétiques - Térajoules | 110 |

Combustibles solides

| | |
|---|-----|
| 5. Production, commerce et consommation de combustibles solides - équivalent houille | 129 |
| 6. Production, commerce et consommation de houille | 140 |
| 7. Commerce international de houille (principaux importateurs et exportateurs) 2009 et 2010 | 150 |
| 8. Production, commerce et consommation de lignite et charbon sous-bitumineux | 154 |
| 9. Production, commerce et consommation de coke | 160 |
| 10. Production, commerce et consommation d'agglomérés (briquettes de houille) | 169 |
| 11. Production, commerce et consommation de briquettes de lignite et de tourbe | 172 |
| 12. Production, commerce et consommation de tourbe | 175 |
| 13. Séries de statistiques des renouvelables et des déchets | 179 |

CONTENTS (continued)**TABLE DES MATIERES** (suite)

| Tables | Page | Tableaux | Page |
|---|-------------|---|-------------|
| Liquid fuels | | Combustibles liquides | |
| 14. Production, trade and consumption of crude petroleum | 214 | 14. Production, commerce et consommation de pétrole brut | 214 |
| 15. International trade of crude petroleum (principal importers and exporters); 2009 and 2010 | 226 | 15. Commerce international du pétrole brut (principaux importateurs et exportateurs); 2009 et 2010 | 226 |
| 16. Refinery distillation capacity, throughput and output | 230 | 16. Capacité de traitement des raffineries, quantités traitées et production totale | 230 |
| 17. Production, trade and consumption of liquefied petroleum gas | 242 | 17. Production, commerce et consommation de gaz de pétrole liquéfié | 242 |
| 18. Production, trade and consumption of aviation gasoline | 258 | 18. Production, commerce et consommation d'essence aviation | 258 |
| 19. Production, trade and consumption of motor gasoline | 267 | 19. Production, commerce et consommation d'essence auto | 267 |
| 20. Production, trade and consumption of kerosene | 285 | 20. Production, commerce et consommation de pétrole lampant | 285 |
| 21. Production, trade and consumption of jet fuels | 300 | 21. Production, commerce et consommation de carburéacteurs | 300 |
| 22. Production, trade and consumption of gas-diesel oils | 316 | 22. Production, commerce et consommation de gazole/carburant diesel | 316 |
| 23. Production, trade and consumption of residual fuel oil | 335 | 23. Production, commerce et consommation de mazout résiduel | 335 |
| 24. Production, trade and consumption of energy petroleum products | 351 | 24. Production, commerce et consommation de produits pétroliers énergétiques | 351 |
| 25. Production of non-energy products from refineries - by type | 370 | 25. Production des raffineries – produits non énergétiques - par catégorie | 370 |
| 26. Production of energy products from refineries - by type | 380 | 26. Production des raffineries – produits énergétiques - par catégorie | 380 |
| 27. Capacity and production of natural gas liquid plants - by type | 391 | 27. Capacité et production des usines d'extraction de liquides de gaz naturel - par catégorie de produits | 391 |
| Gaseous fuels | | Combustibles gazeux | |
| 28. Production, trade and consumption of natural gas | 398 | 28. Production, commerce et consommation de gaz naturel | 398 |
| 29. International trade of natural gas (principal importers and exporters); 2009 and 2010 | 410 | 29. Commerce international du gaz naturel (principaux importateurs et exportateurs); 2009 et 2010 | 410 |
| 30. Production of other gases - by type | 414 | 30. Production d'autres gaz - par catégorie | 414 |
| 31. Production, trade and consumption of gases | 425 | 31. Production, commerce et consommation de gaz | 425 |

CONTENTS (continued)

| Tables | Page |
|---|-------------|
| Electricity and heat | |
| 32. Net installed capacity of electric generating plants - by type..... | 443 |
| 33. Utilization of installed electric generating capacity - by type | 479 |
| 34. Production of electricity - by type | 514 |
| 35. Production, trade and consumption of electricity | 550 |
| 36. Production of heat - by type | 569 |
| Nuclear fuels | |
| 37. Production of uranium (uranium content) | 575 |
| Energy resources | |
| 38. Selected energy resources and reserves | 578 |

Statistiques compilées à la fin d'avril 2013

INTRODUCTION

The *Energy Statistics Yearbook 2010* is a comprehensive collection of international energy statistics prepared by the United Nations Statistics Division. It is the fifty-fourth in a series of annual compilations which commenced under the title *World Energy Supplies in Selected Years, 1929-1950*.¹ It updates the statistical series shown in the previous issue. Supplementary series of monthly data on production of energy may be found in the *Monthly Bulletin of Statistics*.²

The principal objective of the *Yearbook* is to provide a global framework of comparable data on long-term trends in the supply of mainly commercial primary and secondary forms of energy. Data for each type of fuel and aggregated data for the total mix of commercial fuels are shown for individual countries and areas and are summarized into regional and world totals. The data are compiled primarily from the annual energy questionnaire distributed by the United Nations Statistics Division and supplemented by official national statistical publications, as well as publications from international and regional organizations. Where official data are not available or are inconsistent, estimates are made by the Statistics Division based on governmental, professional or commercial materials. Estimates include, but are not limited to, extrapolated data based on partial year information, use of annual trends, trade data based on partner country reports, breakdowns of aggregated data as well as analysis of current energy events and activities.

This issue of the *Yearbook* contains data in original and common units (coal equivalent, oil equivalent, and joules) for the years 2007-2010. By referring to previous volumes of the publication, time series can be established from 1950 to the present. In addition to the basic tables showing production, trade, stock changes, bunkers, and consumption, information is included on various other topics such as:

L'*Annuaire des statistiques de l'énergie 2010* est une collection complète de statistiques internationales de l'énergie, établie par la Division de statistique de l'Organisation des Nations Unies. La présente édition est la cinquante-quatrième d'une série de compilations annuelles dont la première est parue sous le titre *World Energy Supplies in Selected Years, 1929-1950*.¹ Elle constitue une mise à jour des séries statistiques présentées dans l'édition précédente. Des séries additionnelles de données mensuelles sur la production d'énergie sont publiées dans le *Bulletin mensuel de statistique*.²

Le principal objet de l'*Annuaire* est de fournir un cadre global de comparaison des données sur les mouvements à long terme de l'offre des formes primaires et secondaires d'énergie à caractère essentiellement commercial. Les données pour chaque type de combustible et les données agrégées pour l'ensemble des combustibles commerciaux sont présentées pour chaque pays ou zone et sont regroupées en totaux régionaux et mondiaux. Les données, essentiellement rassemblées à partir du questionnaire annuel de l'énergie envoyé par la Division de statistique de l'ONU, sont complétées à l'aide des publications officielles des organismes nationaux de statistique ainsi que des publications des organisations internationales et régionales. Lorsque les données officielles ne sont pas disponibles ou ne sont pas cohérentes, la Division de statistique établit des estimations en s'appuyant sur la documentation d'origine gouvernementale, professionnelle ou commerciale. Les estimations comprennent mais ne se limitent pas à l'extrapolation des données basées sur des informations annuelles partielles, à l'utilisation des tendances annuelles, aux données du commerce fournies par les pays partenaires, à la désagrégation de même qu'à l'analyse des activités et développements courants dans le domaine de l'énergie.

La présente édition contient des données exprimées en unités d'origine et en unités communes (équivalent charbon, équivalent pétrole, et joules) pour les années 2007 à 2010. En se référant aux éditions antérieures, on peut établir une série allant de 1950 jusqu'à maintenant. En plus des tableaux de base, où apparaissent la production, le commerce, les variations de stocks, les stocks et la consommation, l'*Annuaire* contient des données sur d'autres sujets, par exemple:

¹Statistical Papers, Series J, No. 1 (United Nations publication, Sales No. 1952.XVII.3).

²Statistical Papers, Series Q, *Monthly Bulletin of Statistics*, (United Nations publication).

¹Etudes statistiques, Séries J No. 1 (publication des Nations Unies, numéro de vente: 1952, XVII.3).

²Etudes statistiques, Series Q, *Bulletin mensuel de statistique* (publication des Nations Unies).

INTRODUCTION (continued / suite)

(a) Principal importers and exporters of coal, crude petroleum and natural gas for the years 2009 and 2010;

(b) The capacity of petroleum refineries, natural gas liquids plants and electric generating plants by type;

(c) The ratio of crude petroleum reserves to petroleum production (R/P ratio);

(d) The new and renewable sources of energy: fuelwood, charcoal, bagasse, peat, biodiesel, biogas, alcohol, and electricity generated from hydro, solar, wind, tide, wave and geothermal sources;

(e) Heat produced in combined heat and power plants generating electricity and useful heat in a single installation, district heating plants and geothermal sources and nuclear power plants.

The information contained in the *Yearbook* is also available on CD and in electronic format. Requests for information should be directed to the United Nations Statistics Division.

Acknowledgement is due to the following specialized and intergovernmental agencies whose publications have been utilized in supplementing our statistics: Comité professionnel du pétrole (CPP), Food and Agriculture Organization of the United Nations (FAO), International Atomic Energy Agency (IAEA), International Energy Agency of the Organisation for Economic Co-operation and Development (IEA/OECD), International Sugar Organization (ISO), Organization of Arab Petroleum Exporting Countries (OAPEC), Organization of the Petroleum Exporting Countries (OPEC), Organización Latinoamericana de Energía (OLADE), Interstate Statistical Committee of the Commonwealth of Independent States (STATCIS), Statistical Office of the European Communities (Eurostat), World Energy Council (WEC). Acknowledgement is also made to governmental, energy and statistical authorities of the Member States which have been extremely cooperative in providing data.

(a) Les principaux importateurs et exportateurs de houille, de pétrole brut et de gaz naturel pour les années 2009 et 2010;

(b) La capacité des raffineries de pétrole, des usines d'extraction de liquides de gaz naturel et des centrales électriques, par catégorie;

(c) Le rapport entre réserves brutes de pétrole et production de pétrole (rapport R/P);

(d) Les sources d'énergie nouvelles et renouvelables: le bois de chauffage, le charbon de bois, la bagasse, le biodiesel, le biogaz, l'alcool, la tourbe et l'électricité de source hydraulique, solaire, éolienne, marémotrice, géothermique, et des vagues;

(e) Chaleur en provenance des centrales à cycle mixte produisant dans une même installation de l'électricité et de la chaleur utile, des centrales de chauffage urbain, et des sources géothermiques et des centrales nucléaires.

Les données présentées dans l'*Annuaire* sont également disponibles sur CD et sur le format électronique. On peut les obtenir auprès de la Division de statistique de l'Organisation des Nations Unies.

Nous remercions de leur aide les institutions spécialisées et intergouvernementales énumérées ci-après dont les publications nous ont aidés à compléter nos statistiques: le Comité professionnel du pétrole (CPP), l'Organisation des Nations Unies pour l'alimentation et l'agriculture (FAO), l'Agence internationale de l'énergie atomique (AIEA), l'Agence internationale de l'énergie, l'Organisation de coopération et de développement économiques (AIE/OCDE), l'Organisation internationale du sucre (OIS), l'Organisation des pays arabes exportateurs de pétrole (OPAEP), l'Organisation des pays exportateurs de pétrole (OPEP), l'Organisation de l'énergie de l'Amérique latine (OLADE), le Comité de statistique de la Communauté d'États indépendants (STATCIS), l'Office statistique des Communautés européennes (Eurostat), le Conseil mondiale de l'énergie (CME). Les auteurs de l'*Annuaire des statistiques de l'énergie* remercient les institutions gouvernementales, les agences de l'énergie et les offices de statistiques des États Membres pour leur plus haut degré de coopération.

COUNTRY NOMENCLATURE - NOMENCLATURE DES PAYS

AUSTRALIA – Data exclude the overseas territories.

CHINA – Data exclude Hong Kong and Macao Special Administrative Regions (Hong Kong SAR and Macao SAR) and Taiwan Province.

CHINA, HONG KONG SAR – Data on Jet fuel include aviation gasoline and kerosene.

CHINA, MACAO SAR – For confidentiality reasons, data on solid fuels, jet fuel, petroleum coke and other petroleum products (2007-2010), trade data for motor gasoline (2007-2010), stock changes of kerosene (2010), exports of charcoal (2007-2010), and data on fuelwood (2010) are not available.

DENMARK – Data exclude Greenland and the Danish Faroes.

FRANCE – Data exclude the following departments and territories: Guadeloupe, French Guiana, Martinique, New Caledonia, French Polynesia, Réunion and St. Pierre Miquelon. It includes Monaco.

GREENLAND – Data for jet fuel include kerosene.

ISRAEL – Data for kerosene include jet fuel.

ITALY – Data include San Marino and the Holy See.

JAPAN – Data include Okinawa.

KUWAIT – The data for crude petroleum production include 50 per cent of the output of the Neutral Zone.

MADAGASCAR – Data for bitumen include petroleum coke.

NETHERLANDS – Data exclude Suriname and the Netherlands Antilles. Data for petroleum coke are confidential for the period 2006-2007.

AUSTRALIE – Les données n'incluent pas les territoires d'outre-mer.

CHINE – Les données n'incluent pas les Régions administratives spéciales de Hong-Kong et Macao (Hong-Kong RAS et Macao RAS) et la province de Taiwan.

CHINE, HONG KONG SAR – Les données sur les carburéacteurs incluent l'essence d'aviation et le pétrole lampant

CHINE, MACAO SAR – Pour des raisons de confidentialité, les données sur les combustibles solides, carburéacteurs, coke de pétrole et des autres produits pétroliers (2007-2010), les données sur le commerce international de essence auto (2007-2010), les variations des stocks de pétrole lampant (2007-2010), les exportations de charbon de bois (2007-2010) et les données sur le bois de chauffage (2010) ne sont pas disponibles.

DANEMARK – Les données n'incluent pas le Groenland et les Iles Féroé danoises.

FRANCE – Les données n'incluent pas les territoires d'outre-mer suivants : Guadeloupe, Guyane française, Martinique, Nouvelle-Calédonie, Polynésie française, Ile de la Réunion et Saint-Pierre-et-Miquelon. Comprend Monaco.

GROENLAND – Les données pour les carburéacteurs comprennent le pétrole lampant.

ISRAËL – Les données pour le pétrole lampant incluent les carburéacteurs.

ITALIE – Les données incluent Saint-Marin et le Saint-Siège.

JAPON – Les données incluent Okinawa.

KOWEÏT – Les données de production de pétrole brut incluent 50 pour cent de la sortie de la zone neutre.

MADAGASCAR – Les données sur le bitume incluent le coke de pétrole.

PAYS-BAS – Les données n'incluent pas le Suriname et les Antilles néerlandaises. Les données sur le coke de pétrole sont confidentielles pour la période 2006-2007.

NETHERLANDS ANTILLES – comprises Bonaire, Curaçao, Saba, St. Eustatius and the Dutch part of St. Martin.

NORWAY – Data include Svalbard and Jan Mayen Islands.

PORTUGAL – Data include the Azores and Madeira.

SAUDI ARABIA – Data for crude petroleum production include 50 per cent of the output of the Neutral Zone.

SERBIA – Data exclude Kosovo

SPAIN – Data include the Canary Islands.

SWITZERLAND – includes Liechtenstein for oil statistics.

UKRAINE – For confidentiality reasons, the production of the following products is not available: lignite (2007-2010), hard coal briquettes (2008-2010), lignite briquettes (2008-2010), kerosene (2007-2010), petroleum coke (2007-2010), aviation gasoline (2009-2010), jet fuel (2009-2010), petroleum waxes (2009), and white spirit (2008-2010).

UNITED STATES – includes the 50 states and the District of Columbia. Oil statistics as well as coal trade statistics also include Puerto Rico, Guam, the U.S. Virgin Islands, American Samoa, Johnston Atoll, Midway Islands, Wake Island and the Northern Mariana Islands.

UNITED KINGDOM – includes Jersey and Guernsey for oil statistics. It excludes these islands for electricity.

ANTILLES NEERLANDAISES – comprend Bonaire, Curaçao, Saba, Saint-Eustache et la partie néerlandaise de Saint-Martin.

NORVEGE – Les données incluent les Îles Svalbard et Jan Mayen

PORTUGAL – Les données incluent les Açores et l'île de Madère.

ARABIE SAOUDITE – Les données de production de pétrole brut incluent 50 pour cent de la sortie de la zone neutre.

SERBIE – Les données n'incluent pas le Kosovo.

ESPAGNE – Les données incluent les Iles Canaries.

SUISSE – y compris le Liechtenstein pour les statistiques sur le pétrole.

UKRAINE – Pour des raisons de confidentialité, la production des produits suivants n'est pas disponible: lignite (2007-2010), briquettes de houille (2008-2010), briquettes de lignite (2008-2010), pétrole lampant (2007-2010), coke de pétrole (2007-2010), essence d'aviation (2009-2010), carburéacteurs (2009-2010), cires de pétrole (paraffines) (2009) et white spirit/essence spéciales (2008-2010).

ETATS-UNIS – englobent les 50 Etats fédérés et le District de Columbia. Les statistiques sur le pétrole et sur les échanges de charbon concernent également Porto Rico, l'île de Guam, les Iles Vierges des Etats-Unis, le Territoire non incorporé des Samoa américaines, l'île Johnston, les Iles Midway, l'île de Wake et les Iles Mariannes-du-Nord.

ROYAUME-UNI – englobe le Jersey et Guernesey pour les statistiques sur le pétrole. Il exclut ces îles pour les statistiques sur l'électricité.

ABBREVIATIONS AND SYMBOLS – ABREVIATIONS ET SIGNES CONVENTIONNELS

The following symbols and abbreviations have been used:

| | |
|--------------------------------|--|
| C:H | ratio between carbon and hydrogen |
| cSt | centistoke |
| m ³ | cubic metre |
| C ₃ H ₈ | chemical symbol for propane gas |
| C ₄ H ₁₀ | chemical symbol for butane gas |
| °C | degree Celsius |
| kcal | kilocalorie |
| kg | kilogramme |
| kg/cm ² | kilogramme per square centimetre |
| kWh | kilowatt-hour |
| LPG | liquefied petroleum gas |
| mg/g | milligramme per gramme |
| MJ | mégajoule (10 ⁶ joules) |
| NGL | natural gas liquids |
| RON | research octane number |
| t | metric ton |
| TCE | ton of coal equivalent |
| TJ | terajoule (10 ¹² joules) |
| TOE | ton of oil equivalent |
| * | estimate by the United Nations Statistics Division |
| .. | data not applicable or not available |

Les abréviations et signes conventionnels utilisés sont les suivants:

| | |
|--------------------------------|--|
| C:H | rapport du carbone à l'hydrogène |
| cSt | centistoke |
| m ³ | mètre cube |
| C ₃ H ₈ | symbole chimique du gaz propane |
| C ₄ H ₁₀ | symbole chimique du gaz butane |
| °C | degré Celsius |
| kcal | kilocalorie |
| kg | kilogramme |
| kg/cm ² | kilogramme par centimètre carré |
| kWh | kilowatt-heure |
| GPL | gaz de pétrole liquéfié |
| mg/g | milligramme par gramme |
| MJ | mégajoule (10 ⁶ joules) |
| LGN | liquides de gaz naturel |
| IOR | indice d'octane recherché |
| t | tonne métrique |
| TEC | tonne d'équivalent charbon |
| TJ | terajoule (10 ¹² joules) |
| TEP | tonne d'équivalent pétrole |
| * | estimation de la Division de statistique de l'Organisation des Nations Unies |
| .. | données non disponibles ou non applicables |

DEFINITIONS

SOLID FUELS

Hard coal – Coal that has a high degree of coalification with a gross calorific value above 23,865 KJ/kg (5,700 kcal/kg) on an ash-free but moist basis, and a mean random reflectance of vitrinite of at least 0.6. Slurrings, middlings and other low-grade coal products, which cannot be classified according to the type of coal from which they are obtained, are included under hard coal. There are two sub-categories of hard coal: (i) coking coal and (ii) other bituminous coal and anthracite (also known as steam coal). Coking coal is a hard coal with a quality that allows the production of coke suitable to support a blast furnace charge. Steam coal is coal used for steam raising and space heating purposes and includes all anthracite coals and bituminous coals not classified as coking coal.

Lignite – One of the two sub-categories of brown coal. Brown coal is coal with a low degree of coalification which retained the anatomical structure of the vegetable matter from which it was formed. It has a mean random reflectance of vitrinite of less than 0.6, provided that the gross calorific value (on a moist ash-free basis) is less than 23,865 KJ/kg (5,700 kcal/kg). Brown coal comprises: (i) lignite - non-agglomerating coals with a gross calorific value less than 17,435 KJ/kg (4,165 kcal/kg) and greater than 31 per cent volatile matter on a dry mineral matter free basis and (ii) sub-bituminous coal - non-agglomerating coals with a gross calorific value between 17,435 KJ/kg (4,165 kcal/kg) and 23,865 KJ/kg (5,700 kcal/kg) containing more than 31 per cent volatile matter on a dry mineral matter free basis.

Peat – A solid fuel formed from the partial decomposition of dead vegetation under conditions of high humidity and limited air access (initial stage of coalification). Only peat used as fuel is included. Its principal use is as a household fuel.

Patent fuel (hard coal briquettes) – A composition fuel manufactured from coal fines by shaping with the addition of a binding agent such as pitch.

COMBUSTIBLES SOLIDES

Houille – Charbon à haut degré de houillification et de pouvoir calorifique brut supérieur à 23 865 kJ/kg (5 700 kcal/kg), valeur mesurée pour un combustible exempt de cendres, mais humide et ayant un indice moyen de réflectance de la vitrinite au moins égal à 0,6. Les schlamms, les mixtes et autres produits du charbon de faible qualité qui ne peuvent être classés en fonction du type de charbon dont ils sont dérivés sont inclus dans cette rubrique.

Il y a deux sous-catégories de houille: (i) charbon à coke et (ii) autres charbons bitumineux et anthracite (également dénommé charbon vapeur). Le charbon à coke est une houille d'une qualité permettant la production d'un coke susceptible d'être utilisé dans les hauts fourneaux. Le charbon vapeur est utilisé pour la production de vapeur et pour le chauffage des locaux, et comprend tous les charbons anthraciteux et bitumineux autres que ceux classifiés comme charbons à coke.

Lignite – Une des deux sous-catégories du charbon brun. Le charbon brun est un charbon d'un faible degré de houillification qui a gardé la structure anatomique des végétaux dont il est issu. Son indice moyen de réflectance de la vitrinite est inférieur à 0,6, si son pouvoir calorifique brut (sur base humide, cendres déduites) est inférieur à 23 865 kJ/kg (5 700 kcal/kg). Les charbons bruns comprennent: (i) le lignite – charbon non agglutinant dont le pouvoir calorifique brut est inférieur à 17 435 kJ/kg (4 165 kcal/kg) et qui contient plus de 31% de matières volatiles sur produit sec exempt de matières minérales; (ii) le charbon sous-bitumineux - charbon non agglutinant dont le pouvoir calorifique supérieur se situe entre 17 435 kJ/kg (4 165 kcal/kg) et 23 865 kJ/kg (5 700 kcal/kg) et qui contient plus de 31% de matières volatiles sur produit sec exempt de matières minérales.

Tourbe – Combustible solide issu de la décomposition partielle de végétaux morts dans des conditions de forte humidité et de faible circulation d'air (phase initiale de la houillification). N'est prise en considération ici que la tourbe utilisée comme combustible. La tourbe est utilisée principalement comme combustible domestique.

Agglomérés (briquettes de houille) – Combustibles composites fabriqués par moulage au moyen de fines de charbon avec l'addition d'un liant tel que le brai.

DEFINITIONS (continued/ suite)

Lignite briquettes – A composition fuel manufactured from lignite. The lignite is crushed, dried and molded under high pressure into an even shaped briquette without the addition of binders.

Peat briquettes – A composition fuel manufactured from peat. Raw peat, after crushing and drying, is molded under high pressure into an even-shaped briquette without the addition of binders.

Coal coke – The solid residue obtained from coal or lignite by heating it to a high temperature in the absence or near absence of air. It is high in carbon and low in moisture and volatile matter. Several categories are distinguished:

a) **Coke-oven coke** – The solid product obtained from carbonization of coal, principally coking coal, at high temperature. Coke-oven coke is also called metallurgical coke and is used mainly in the iron and steel industry. Semi-coke, the solid product obtained from carbonization of coal at low temperature, is included with coke-oven coke. It is used mainly as a domestic fuel.

b) **Gas coke** – A by-product of coal used for the production of gas works gas in gasworks. Gas coke is mainly used as a domestic fuel.

c) **Brown coal coke** – A solid product obtained from carbonization of brown coal briquettes.

Oil shale – A sedimentary rock containing a high proportion of organic matter (kerogen), which can be converted to crude oil or gas by heating.

Bituminous sands – Sands or sandstones containing a high proportion of tarry hydrocarbons, capable of yielding oil through heating or other extractive processes. Heavy oils and tars which are so dense and viscous and lacking in primary energy that they cannot be produced commercially by conventional methods, that is, by natural flow or pumping, are also included.

Briquettes de lignite – Combustibles composites fabriqués au moyen de lignite. Le lignite est broyé, séché et moulé sous pression élevée pour donner une briquette de forme régulière sans l'addition d'un élément liant.

Briquettes de tourbe – Combustibles composites fabriqués au moyen de tourbe. La tourbe brute, après broyage et séchage, est moulée sous pression élevée pour donner une briquette de forme régulière sans l'addition d'un élément liant.

Coke de charbon – Résidu solide obtenu lors de la distillation de houille ou de lignite en l'absence totale ou presque totale d'air. Il a une haute teneur en carbone, et une faible teneur en humidité et en matières volatiles. On distingue plusieurs catégories de coke:

a) **Coke de four** – Produit solide obtenu par carbonisation de charbon, principalement le charbon à coke, à une température élevée. Le coke de four est également connu sous le nom de coke métallurgique et est utilisé principalement dans l'industrie sidérurgique. Le semi-coke, qui est un produit solide obtenu par carbonisation de charbon à basse température, est inclus avec le coke de four. Il est utilisé principalement comme combustible domestique.

b) **Coke de gaz** – Sous-produit de l'utilisation du charbon pour la production de gaz manufacturé ou gaz de ville dans les usines à gaz. Le coke de gaz est utilisé principalement comme combustible domestique.

c) **Coke de lignite** – Produit solide obtenu par carbonisation de briquettes de lignite.

Schiste bitumineux – Roche sédimentaire contenant une forte proportion de matières organiques (kérogène), qui peut être transformée en pétrole brut ou en gaz par chauffage.

Sables bitumineux – Sables ou grès contenant une forte proportion d'hydrocarbures goudronneux dont on peut extraire du pétrole par chauffage ou par d'autres procédés d'extraction. Les huiles lourdes et les goudrons qui sont si denses et si visqueux et dépourvus d'énergie primaire qu'ils ne peuvent être extraits commercialement par les méthodes classiques, c'est-à-dire par écoulement naturel ou par pompage, sont aussi inclus dans cette rubrique.

DEFINITIONS (continued/ suite)

LIQUID FUELS

Crude oil – A mineral oil consisting of a mixture of hydrocarbons of natural origin, yellow to black in color, of variable density and viscosity. Data in this category also includes lease or field condensate (separator liquids) which is recovered from gaseous hydrocarbons in lease separation facilities, as well as synthetic crude oil, mineral oils extracted from bituminous minerals such as shales and bituminous sand, and oils from coal liquefaction.

Natural gas liquids (NGL) – Liquid or liquefied hydrocarbons produced in the manufacture, purification and stabilization of natural gas. NGL's include, but are not limited to, ethane, propane, butane, pentane, natural gasolene, and plant condensate. NGL's are either distilled with crude oil in refineries, blended with refined petroleum products or used directly depending on their characteristics.

Plant condensate – Liquid hydrocarbons condensed from wet natural gas in natural gas processing plants. It is used as a petroleum refinery input.

Natural gasolene – Light spirit extracted from wet natural gas, often in association with crude petroleum. It is used as a petroleum refinery and petrochemical plant input and is also used directly for blending with motor spirit without further processing.

Petroleum products – Comprise the liquid fuels, lubricant oils and solid and semi-solid products obtained by distillation and cracking of crude petroleum, shale oil, or semi-refined and unfinished petroleum products. As far as possible the series include fuels consumed in refining, but exclude oil products obtained from natural gas, coal, lignite and their derivatives.

Aviation gasolene – Motor spirit prepared especially for aviation piston engines, with an octane number varying from 80 to 145 RON and a freezing point of -60°C .

COMBUSTIBLES LIQUIDES

Pétrole brut – Huile minérale constituée d'un mélange d'hydrocarbures d'origine naturelle, de couleur variant du jaune au noir, d'une densité et d'une viscosité variables. Figurent également sous cette rubrique les condensats directement récupérés sur les sites d'exploitation des hydrocarbures gazeux (dans les installations prévues pour la séparation des phases liquide et gazeuse), le pétrole brut synthétique, les huiles minérales brutes extraites des roches bitumineuses telles que schistes et sables asphaltiques et les huiles issues de la liquéfaction du charbon.

Liquides de gaz naturel (LGN) – Hydrocarbures liquides ou liquéfiés produits lors de la fabrication, de la purification et de la stabilisation du gaz naturel. Les liquides de gaz naturel comprennent l'éthane, le propane, le butane, le pentane, l'essence naturelle et les condensats d'usine, sans que la liste soit limitative. Les LGN sont soit distillés avec le pétrole brut dans les raffineries, soit mélangés avec les produits pétroliers raffinés, soit utilisés directement, en fonction de leurs caractéristiques.

Condensat d'usine – Hydrocarbure liquide résultant de la condensation du gaz naturel humide dans les usines de traitement du gaz naturel. Il est utilisé comme charge d'alimentation dans les raffineries de pétrole.

Essence naturelle – Essence légère extraite du gaz naturel humide, souvent en association avec le pétrole brut. Elle est utilisée comme charge dans les raffineries de pétrole et les usines pétrochimiques et est aussi employée directement en mélange avec le carburant auto sans traitement supplémentaire.

Produits pétroliers – Comprendent les combustibles liquides, les huiles lubrifiantes et les produits solides et semi-solides obtenus par distillation et craquage du pétrole brut, de l'huile de schiste ou de dérivés du pétrole semi-raffinés ou non raffinés. Autant que possible, les séries comprennent les combustibles consommés lors du raffinage mais ne comprennent pas les produits oléiques obtenus à partir du gaz naturel, du charbon, du lignite et de leurs dérivés.

Essence d'aviation – Carburant fabriqué spécialement pour les moteurs d'avion à pistons, avec un indice d'octane variant de 80 à 145 IOR et dont le point de congélation est de -60°C .

DEFINITIONS (continued/ suite)

Motor gasolene – Light hydrocarbon oil for use in internal combustion engines such as motor vehicles, excluding aircraft. It distills between 35°C and 200°C, and is treated to reach a sufficiently high octane number of generally between 80 and 100 RON. Treatment may be by reforming, blending with an aromatic fraction, or the addition of benzole or other additives (such as tetraethyl lead).

Jet fuel – Consists of gasolene-type jet fuel and kerosene-type jet fuel.

a) Gasolene-type jet fuel – All light hydrocarbon oils for use in aviation gas-turbine engines. It distills between 100°C and 250°C with at least 20% of volume distilling at 143°C. It is obtained by blending kerosene and gasolene or naphtha in such a way that the aromatic content does not exceed 25% in volume. Additives are included to reduce the freezing point to -58°C or lower, and to keep the Reid vapour pressure between 0.14 and 0.21 kg/cm².

b) Kerosene-type jet fuel – Medium oil for use in aviation gas-turbine engines with the same distillation characteristics and flash point as kerosene, with a maximum aromatic content of 20% in volume. It is treated to give a kinematic viscosity of less than 15 cSt at -34°C and a freezing point below -50°C.

Kerosene – Medium oil distilling between 150°C and 300°C; at least 65% of volume distills at 250°C. Its specific gravity is roughly 0.80 and its flash point is above 38°C. It is used as an illuminant and as a fuel in certain types of spark-ignition engines, such as those used for agricultural tractors and stationary engines. Other names for this product are burning oil, vaporizing oil, power kerosene and illuminating oil.

Essence auto – Hydrocarbure léger utilisé dans les moteurs à combustion interne, tels que ceux des véhicules à moteur, à l'exception des aéronefs. Sa température de distillation se situe entre 35°C et 200°C et il est traité de façon à atteindre un indice d'octane suffisamment élevé, généralement entre 80 et 100 IOR. Le traitement peut consister en reformage, mélange avec une fraction aromatique, ou adjonction de benzol ou d'autres additifs (tels que du plomb tétraéthyle).

Carburéacteurs – Comprennent les carburéacteurs du type essence et les carburéacteurs du type kérosène.

a) Les carburéacteurs du type essence comprennent tous les hydrocarbures légers utilisés dans les turboréacteurs d'aviation. Leur température de distillation se situe entre 100°C et 250°C et donne au moins 20% en volume de distillat à 143°C. Ils sont obtenus par mélange de pétrole lampant et d'essence ou de naphtha de façon que la teneur en composés aromatiques ne dépasse pas 25% en volume. Des additifs y sont ajoutés afin d'abaisser le point de congélation à -58°C ou au-dessous, et de maintenir la tension de vapeur Reid entre 0,14 et 0,21 kg/cm².

b) Les carburéacteurs du type kérosène sont des huiles moyennement visqueuses utilisées dans les turboréacteurs d'aviation, ayant les mêmes caractéristiques de distillation et le même point d'éclair que le pétrole lampant et une teneur en composés aromatiques ne dépassant pas 20% en volume. Elles sont traitées de façon à atteindre une viscosité cinématique de moins de 15 cSt à -34°C et un point de congélation inférieur à -50°C.

Pétrole lampant – Huile moyennement visqueuse dont la température de distillation se situe entre 150°C et 300°C, et qui donne au moins 65% en volume de distillat à 250°C. Sa densité se situe aux alentours de 0,80 et son point d'éclair est supérieur à 38°C. Il sert à l'éclairage et aussi de carburant dans certains moteurs à allumage par étincelle, tels que ceux utilisés dans les tracteurs agricoles et les installations stationnaires. Les données concernent les produits couramment appelés kérosène, pétrole carburant ou "power kerosene", et huile d'éclairage.

DEFINITIONS (continued/ suite)

Gas-diesel oil (distillate fuel oil) – Heavy oils distilling between 200°C and 380°C, but distilling less than 65% in volume at 250°C, including losses, and 85% or more at 350°C. Its flash point is always above 50°C and its specific gravity is higher than 0.82. Heavy oils obtained by blending are grouped together with gas oils on the condition that their kinematic viscosity does not exceed 27.5 cSt at 38°C. Also included are middle distillates intended for the petrochemical industry. Gas-diesel oils are used as a fuel for internal combustion in diesel engines, as a burner fuel in heating installations, such as furnaces, and for enriching water gas to increase its luminosity. Other names for this product are diesel fuel, diesel oil and gas oil.

Residual fuel oil – A heavy oil that makes up the distillation residue. It comprises all fuels (including those obtained by blending) with a kinematic viscosity above 27.5 cSt at 38°C. Its flash point is always above 50°C and its specific gravity is higher than 0.90. It is commonly used by ships and industrial large-scale heating installations as a fuel in furnaces or boilers.

Liquefied petroleum gas (LPG) – Hydrocarbons which are gaseous under conditions of normal temperature and pressure but are liquefied by compression or cooling to facilitate storage, handling and transportation. They are (i) extracted by stripping of natural gas at crude petroleum and natural gas sources; (ii) extracted by stripping of imported natural gas in installations of the importing country; and (iii) produced both in refineries and outside of refineries in the course of processing crude petroleum or its derivatives. It comprises propane (C₃H₈), butane (C₄H₁₀), or a combination of the two. Also included is ethane (C₂H₆) from petroleum refineries or natural gas producers' separation and stabilization plants.

Gazole/carburant diesel (mazout distillé) – Huiles lourdes dont la température de distillation se situe entre 200°C et 380°C, mais qui donnent moins de 65% en volume de distillat à 250°C (y compris les pertes) et 85% ou davantage à 350°C. Leur point d'éclair est toujours supérieur à 50°C et leur densité supérieure à 0,82. Les huiles lourdes obtenues par mélange sont classées dans la même catégorie que les gazoles à condition que leur viscosité cinématique ne dépasse pas 27,5 cSt à 38°C. Sont compris dans cette rubrique les distillats moyens destinés à l'industrie pétrochimique. Les gazoles servent de carburant pour la combustion interne dans les moteurs diesel, de combustible dans les installations de chauffage telles que les chaudières, et d'additifs destinés à augmenter la luminosité de la flamme du gaz à l'eau. Ce produit est aussi connu sous les appellations de gazole ou gasoil et carburant ou combustible diesel.

Mazout résiduel – Huile lourde constituant le résidu de la distillation. La rubrique comprend tous les combustibles (y compris ceux obtenus par mélange) d'une viscosité supérieure à 27,5 cSt à 38°C. Leur point d'éclair est toujours supérieur à 50°C et leur densité supérieure à 0,90. Ces produits sont couramment utilisés comme combustible dans les chaudières des navires et des grandes installations de chauffage industriel. Ils sont également connus sous le nom de fioul lourd.

Gaz de pétrole liquéfiés (GPL) – Hydrocarbures qui sont à l'état gazeux dans des conditions de température et de pression normales mais qui sont liquéfiés par compression ou refroidissement pour en faciliter l'entreposage, la manipulation et le transport. Ils sont (i) extraits par désessencierement du gaz naturel sur les sites de production de pétrole brut et de gaz naturel; (ii) extraits par désessencierement du gaz naturel importé dans les installations du pays importateur; et (iii) produits aussi bien à l'intérieur qu'en dehors des raffineries, au cours du traitement du pétrole brut ou de ses dérivés. Dans cette rubrique figurent le propane (C₃H₈) et le butane (C₄H₁₀) ou un mélange de ces deux hydrocarbures. Est également inclus l'éthane (C₂H₆) produit dans les raffineries ou dans les installations de séparation et de stabilisation des producteurs de gaz naturel.

DEFINITIONS (continued/ suite)

Refinery gas – Non-condensable gas obtained during distillation of crude oil or treatment of oil products (e.g. cracking) in refineries. It consists mainly of hydrogen, methane, ethane and olefins, and is used principally as a refinery fuel. Refinery gas is also known as still gas.

Feedstocks – Products or a combination of products derived from crude oil destined for further processing in the refining industry other than blending. They are transformed into one or more components and/or finished products. This definition covers naphtha imported for refinery intake and naphtha returned from the chemical industry to the refining industry.

Naphtha – Light or medium oil distilling between 30°C and 210°C, for which there is no official definition, but which does not meet the standards laid down for motor spirit. The properties depend upon consumer specification. The C:H ratio is usually 84:14 or 84:16, with a very low sulphur content. Naphtha may be further blended or mixed with other materials to make high-grade motor gasoline or jet fuel, or may be used as a raw material for manufactured gas. Naphtha is sometimes used as input to feedstocks to make various kinds of chemical products, or may be used as a solvent.

White spirit/industrial spirit – A highly refined distillate with a boiling point ranging from 135°C to 200°C, which is used as a paint solvent and for dry-cleaning purposes.

Lubricants – Viscous, liquid hydrocarbons rich in paraffin waxes, distilling between 380°C and 500°C, obtained by vacuum distillation of oil residues from atmospheric distillation. Additives may be included to alter their characteristics. Their main characteristics are: a flash point greater than 125°C; a pour point between -25°C and +5°C depending on the grade; a strong acid number (normally 0.5 mg/g); an ash content less than or equal to 0.3%; and a water content less than or equal to 0.2%. Included are cutting oils, white oils, insulating oils, spindle oils and lubricating greases.

Gaz de raffinerie – Comprend les gaz non condensables obtenus dans les raffineries lors de la distillation du pétrole brut ou du traitement des produits pétroliers (par craquage par exemple). Il s'agit principalement d'hydrogène, de méthane, d'éthane et d'oléfines. Ils sont généralement utilisés en totalité comme combustible de raffinerie. Ce produit est également appelé gaz de distillation.

Produits d'alimentation de raffinerie – Produits ou combinaisons de produits dérivés du pétrole brut, destinés à subir dans l'industrie du raffinage un traitement ultérieur autre qu'un mélange. Ils sont transformés en un ou plusieurs constituants et/ou produits finis. Cette rubrique comprend les naphtas importés pour l'alimentation des raffineries et les naphtas retournés par l'industrie chimique à l'industrie du raffinage.

Naphtas – Huiles légères ou moyennes, dont les températures de distillation se situent entre 30°C et 210°C et pour lesquelles il n'existe pas de définition officielle, mais qui ne satisfont pas aux normes fixées pour le carburant auto. Leurs propriétés peuvent être adaptées aux spécifications des utilisateurs; le rapport C/H est habituellement de 84/14 ou 84/16, avec une très faible teneur en soufre. Les naphtas peuvent être coupés ou mélangés avec d'autres produits en vue d'obtenir de l'essence auto de haute qualité ou du carburéacteur, ou peuvent servir de matière première dans la fabrication du gaz de ville. Les naphtas sont souvent utilisés comme charge de départ pour la fabrication de divers produits chimiques, ou encore peuvent être utilisés comme solvant.

White spirit/essences spéciales – Distillats hautement raffinés dont le point d'ébullition se situe entre 135°C et 200°C, utilisés comme diluants pour peinture et comme solvants pour le nettoyage à sec.

Lubrifiants – Hydrocarbures liquides et visqueux, riches en paraffines, dont les températures de distillation se situent entre 380°C et 500°C et qui sont obtenus par distillation sous vide des résidus de la distillation atmosphérique du pétrole. Des additifs peuvent y être incorporés pour modifier leurs caractéristiques. Leurs principales caractéristiques sont les suivantes: point d'éclair supérieur à 125°C; point d'écoulement compris entre -25°C et +5°C selon la qualité; indice d'acide fort (normalement égal à 0,5 mg/g); teneur en cendres inférieure ou égale à 0,3%, et teneur en eau inférieure ou égale à 0,2%. Figurent dans cette rubrique les huiles de coupe, les huiles blanches, les huiles isolantes, les huiles à broches et les graisses lubrifiantes.

DEFINITIONS (continued/ suite)

Bitumen – Solid or viscous hydrocarbon with a colloidal structure, brown or black in color, which is obtained as a residue by vacuum distillation of oil residues from atmospheric distillation. It is sometimes soluble in carbon bisulphite, non-volatile, thermoplastic (generally between 150°C and 200°C), often with insulating and adhesive properties. It is used mainly in road construction. Natural asphalt is excluded.

Petroleum waxes – Saturated aliphatic hydrocarbons obtained as residues extracted when dewaxing lubricant oils, with a crystalline structure with C greater than 12. Their main characteristics are as follows: they are colorless, in most cases odorless and translucent; they have a melting point above 45°C, a specific gravity of 0.76 to 0.78 at 80°C, and a kinematic viscosity between 3.7 and 5.5 cSt at 99°C. These waxes are used for candle manufacture, polishes and waterproofing of containers, wrappings, etc.

Petroleum coke – A shiny, black solid residue obtained by cracking and carbonization in furnaces. It consists mainly of carbon (90 to 95%) and generally burns without leaving any ash. It is used mainly in metallurgical processes. It excludes those solid residues obtained from carbonization of coal.

Other petroleum products – Products of petroleum origin (including partially refined products) not otherwise specified.

Alcohol – Ethanol (ethyl alcohol) and methanol (methyl alcohol) for use as a fuel. Ethanol can be produced from sugar, starch and cellulose and is used mainly in transport (on its own or blended with gasoline). Methanol can be produced from wood, crop residues, grass, and the like and can be used in internal combustion engines.

Bitume – Hydrocarbure solide ou visqueux de structure colloïdale, de couleur brune ou noire, obtenu comme résidu de la distillation sous vide des résidus de la distillation atmosphérique du pétrole. Il est parfois soluble dans le bisulphite de carbone, non volatil, thermoplastique (généralement entre 150°C et 200°C), ayant souvent des propriétés isolantes et adhésives. Il est utilisé principalement pour la construction des routes. Cette rubrique ne comprend pas l'asphalte naturel.

Cires de pétrole (paraffines) – Hydrocarbures aliphatiques saturés obtenus comme résidus lors du déparaffinage des huiles lubrifiantes et qui ont une structure cristalline, avec un nombre d'atomes de carbone supérieur à 12. Leurs principales caractéristiques sont les suivantes: incolores, la plupart du temps inodores et translucides; point de fusion supérieur à 45°C, densité comprise entre 0,76 et 0,78 à 80°C, et viscosité cinématique comprise entre 3,7 et 5,5 cSt à 99°C. Ces cires servent à la fabrication des bougies et des encaustiques, à l'imperméabilisation de récipients et d'emballages, etc.

Coke de pétrole – Résidu solide d'un noir brillant, obtenu par craquage et carbonisation au four, constitué essentiellement de carbone (90 à 95%) et dont la combustion ne laisse généralement aucune cendre. Il est utilisé surtout en métallurgie. Cette rubrique ne comprend pas les résidus solides obtenus par carbonisation du charbon.

Autres produits pétroliers – Produits d'origine pétrolière (y compris les produits partiellement raffinés) non désignés autrement.

Alcools – Comprennent l'éthanol (alcool éthylique) et le méthanol (alcool méthylique) utilisés comme combustibles. L'éthanol peut être obtenu à partir du sucre, de l'amidon et de la cellulose et est utilisé essentiellement pour les transports (seul ou mélangé avec de l'essence). Le méthanol peut être obtenu à partir du bois, des résidus agricoles et des fourrages verts et peut être utilisé dans les moteurs à combustion interne.

DEFINITIONS (continued/ suite)

Biodiesel – It refers to oil derived from biological sources and modified chemically so that it can be used as fuel in compression ignition (diesel) internal combustion engines, or for heating. Biological sources of biodiesel include, but are not limited to, vegetable oils made from canola (rapeseed), soybeans, corn, oil palm, peanut, or sunflower. Chemically, biodiesel is a linear alkyl ester made by transesterification of vegetable oils or animal fats with methanol. The transesterification distinguishes biodiesel from straight vegetable and waste oils. Straight oils can be used as fuel only in if the engine is modified; for this reason, it is not recommended to report them as biodiesel. Biodiesel has a flash point of around 150°C and a density of 0.86 kg/liter. When burned, some of the emissions (sulfur, carbon monoxide, and aromatic hydrocarbons) are lower than that of petroleum-derived gas-diesel oil, while some are higher (nitrogen oxides, particulate matter (soot)). Biodiesel is biodegradable and non-toxic. It has higher cetane rating than petroleum diesel, with which it is often blended. For example, B20 is a fuel containing 20% of biodiesel and 80% of regular diesel; B100 refers to pure biodiesel.

Biodiesel – Le biodiesel fait référence aux huiles dérivées de sources biologiques et modifiées chimiquement pour être utilisées comme carburant pour les moteurs ou comme chauffage. Comme sources biologiques de biodiesel on peut citer: les huiles végétales provenant du canola (colza), du soja, du maïs, du palmier, de la pistache, du tournesol. Chimiquement, le biodiesel est un ester alkyle linéaire obtenu à travers transestérification d'huile végétale ou animale mélangée avec le méthanol. La transestérification distingue le biodiesel des huiles végétales brutes et des huiles déchets. Les huiles végétales à l'état brut peuvent être utilisées comme carburants seulement avec modification du moteur, pour cette raison il n'est pas recommandé de les considérer comme biodiesel. Le biodiesel a un point d'éclair aux environs de 150°C et une densité de 0.86 kg/litre. Les dégagements (sulfure, monoxyde de carbone et hydrocarbonés aromatiques) obtenus du biodiesel chauffé sont inférieurs à ceux dérivés du carburant diesel, alors que d'autres (oxydes de nitrogène, suie) sont supérieurs. Le biodiesel est biodégradable et n'est pas toxique. Son taux de cétane est plus élevé que le pétrodiesel avec lequel il est souvent mélangé. Par exemple, le B20 est un carburant diesel contenant 20% de biodiesel et 80% de gazole ; B100 fait référence au biodiesel vierge.

DEFINITIONS (continued/ suite)

GASEOUS FUELS

Natural gas – Gases consisting mainly of methane occurring naturally in underground deposits. It includes both non-associated gas (originating from fields producing only hydrocarbons in gaseous form) and associated gas (originating from fields producing both liquid and gaseous hydrocarbons), as well as methane recovered from coal mines. Production of natural gas refers to dry marketable production, measured after purification and extraction of natural gas liquids and sulphur. Extraction losses and the amounts that have been reinjected, flared, and vented are excluded from the data on production.

Gasworks gas – Gas produced by public utilities or private plants whose main activity is the production, transport and distribution of such gas. It includes gas produced by carbonization, by total gasification with or without enrichment with oil products, by cracking of natural gas, and by reforming or mixing gases.

Coke-oven gas – By-product of the carbonization process in the production of coke in coke ovens.

Blast furnace gas – By-product in blast furnaces recovered on leaving the furnace.

Biogas – By-product of the fermentation of biomass, principally animal wastes, by bacteria. It consists mainly of methane gas and carbon dioxide.

ELECTRICITY AND OTHER FORMS OF ENERGY

Electricity production – Refers to gross production, which includes the consumption by station auxiliaries and any losses in the transformers that are considered integral parts of the station. Included also is total electric energy produced by pumping installations without deduction of electric energy absorbed by pumping.

Production data includes solar, tide, wave, wind, wastes, wood and fuel cell production when reported.

COMBUSTIBLES GAZEUX

Gaz naturel – Est constitué de gaz, méthane essentiellement, extraits de gisements naturels souterrains. Il peut s'agir aussi bien de gaz non associé (provenant de gisements qui produisent uniquement des hydrocarbures gazeux) que de gaz associé (provenant de gisements qui produisent à la fois des hydrocarbures liquides et gazeux) ou de méthane récupéré dans les mines de charbon. La production de gaz naturel se rapporte à la production de gaz commercialisable sec, mesurée après purification et extraction des condensats de gaz naturel et du soufre. Les quantités réinjectées, brûlées à la torchère ou éventées et les pertes d'extraction sont exclus des données sur la production.

Gaz d'usine à gaz – Gaz produit par des entreprises publiques ou privées ayant pour principale activité la production, le transport et la distribution de gaz manufacturé. Il comprend le gaz produit par carbonisation, par gazéification totale avec ou sans enrichissement au moyen de produits pétroliers, par craquage de gaz naturel et par reformage ou mélange de différents gaz.

Gaz de cokerie – Sous-produit du processus de carbonisation dans la production du coke dans les fours à coke.

Gaz de haut-fourneau – Sous-produit du fonctionnement des haut-fourneaux, récupéré à la sortie du gueulard.

Biogaz – Sous-produit de la fermentation bactérienne de la biomasse, principalement des déchets animaux. Il est composé surtout de méthane et de gaz carbonique.

ELECTRICITE ET AUTRES FORMES D'ENERGIE

La production d'électricité – La production brute qui comprend la consommation des équipements auxiliaires des centrales et les pertes au niveau des transformateurs considérés comme faisant partie intégrante de ces centrales, ainsi que la quantité totale d'énergie électrique produite par les installations de pompage sans déduction de l'énergie électrique absorbée par ces dernières.

Les données de production incluent solaire, la marée, la vague, le vent, les déchets, le bois et la production de cellule de carburant quand rapporté.

DEFINITIONS (continued/ suite)

Primary electricity refers to electrical energy of geothermal, hydro, nuclear, tide, wind, wave/ocean and solar origin. Its production is assessed at the heat value of electricity (3.6 TJ/million kWh).

Secondary electricity is defined as thermal electricity, which comprises conventional thermal plants of all types, whether or not equipped for the combined generation of heat and electric energy. Accordingly, they include steam-operated generating plants, with condensation (with or without extraction) or with back-pressure turbines and plants using internal combustion engines or gas turbines whether or not these are equipped for heat recovery.

Public utilities comprise the undertakings whose essential purpose is the production, transmission and distribution of electric energy, primarily for use by the public. These may be private companies, co-operative organizations, local or regional authorities, nationalized undertakings or governmental organizations.

Self-producers include undertakings which, in addition to their main activities, they produce (individually or in combination) electric energy intended, in whole or in part, to meet their own needs. They may be privately or publicly owned.

Net installed capacity is measured at the terminals of the stations, i.e., after deduction of the power absorbed by the auxiliary installations and the losses in the station transformers, if any. Data concerning capacity refer in principle to 31 December of the year under consideration.

Imports and exports – Refer to the amounts of electric energy transferred to and from the country concerned, respectively, which are measured at the metering points on the lines crossing the frontiers. Included are imports and exports of electric energy made by means of high-voltage lines crossing frontiers as well as imports and exports made by means of low-voltage lines for use in the immediate vicinity of the frontier, if the quantities so transferred are known.

Électricité primaire est définie comme électricité d'origine géothermique, hydraulique, nucléaire, marémotrice, éolienne, des vagues/océans et solaire. La production est exprimée en pouvoir calorifique de l'électricité (3,6 TJ par million de kWh).

Électricité secondaire est définie comme électricité d'origine thermique qui comprend les centrales thermiques classiques de tous types, qu'elles soient ou non équipées pour la production combinée de chaleur et d'électricité. Sont incluses en conséquence les centrales à vapeur, avec condensation (avec ou sans extraction) ou avec turbines à contre-pression, et les centrales utilisant des moteurs à combustion interne ou des turbines à gaz, équipées ou non d'un système de récupération thermique.

Les services publics comprennent les entreprises dont l'activité principale est la production, le transport et la distribution de l'énergie électrique, principalement pour l'usage public. Il peut s'agir de sociétés privées, de coopératives, de régies locales ou régionales et d'entreprises nationalisées ou autres organismes étatiques.

Les autoproducteurs comprennent les entreprises qui, en plus de leurs activités principales, produisent elles-mêmes (seules ou en association avec d'autres) de l'énergie électrique destinée en totalité ou en partie à satisfaire leurs besoins propres. Celles-ci peuvent appartenir aussi bien au secteur privé qu'au secteur public.

Puissance nette installée est mesurée au bornes de sortie de la centrale, c'est-à-dire déduction faite de la puissance absorbée par les services auxiliaires et par les pertes dans les transformateurs de la centrale s'il en existe. Les données relatives à la puissance installée se rapportent en principe au 31 décembre de l'année considérée.

Importations et exportations – Se rapportent aux quantités d'énergie électrique transférées respectivement vers le pays concerné ou à partir de ce dernier, mesurées aux compteurs situés sur les lignes électriques qui franchissent les frontières. Sont comprises dans cette rubrique les importations et exportations d'énergie électrique effectuées au moyen de lignes à haute tension traversant les frontières, ainsi que les importations et exportations d'électricité effectuées au moyen des lignes à basse tension desservant les régions frontalières lorsque les quantités ainsi transférées sont connues.

DEFINITIONS (continued/ suite)

Heat – Heat obtained from (a) combined heat and power (CHP) plants generating electricity and useful heat in a single installation; (b) district heating (DH) plants and (c) nuclear power plants and geothermal sources. The heat may be in the form of steam, hot water or hot air.

Uranium (U) production – Comprises the U content of uranium ores and concentrates intended for treatment for uranium recovery.

TRADITIONAL FUELS

Fuelwood – All wood in the rough used for fuel purposes. Production data include the portion used for charcoal production, using a factor of 6 to convert from a weight basis to the volumetric equivalent (metric tons to cubic metres) of charcoal.

Bagasse – The cellulosic residue left after sugar is extracted from sugar cane. It is often used as a fuel within the sugar milling industry.

Charcoal – Solid residue, consisting mainly of carbon, obtained by the destructive distillation of wood in the absence of air.

Animal waste – Excreta of cattle, horses, pigs, poultry, etc., and (in principle) excreta of humans, used as a fuel.

Vegetal waste – Mainly crop residues (cereal straw from maize, wheat, paddy rice, etc.) and food processing wastes (rice hulls, coconut husks, ground-nut shells, etc.) used for fuel. Bagasse is excluded.

Municipal waste – Consist of products that are combusted directly to produce heat and/or power and comprise wastes produced by the residential, commercial and public services sectors that are collected by local authorities for disposal in a central location. Hospital waste is included in this category.

Chaleur – Chaleur en provenance (a) des centrales à cycle mixte produisant dans une même installation de l'électricité et de chaleur utile, (b) par le chauffage urbain, (c) des centrales nucléaires et des sources géothermiques. La chaleur peut être produite sous forme de vapeur, d'eau chaude ou d'air chaud.

Production d'uranium (U) – Cette rubrique se rapporte à la teneur en U des minerais d'uranium et des concentrés uranifères destinés à être traités en vue de l'extraction de l'uranium.

COMBUSTIBLES TRADITIONNELS

Bois de chauffage – Tous les types de bois à l'état brut non dégrossis utilisés comme combustibles. Les données de production englobent les quantités utilisées pour la production de charbon de bois, utilisant un facteur de 6 pour convertir en volume le poids de charbon de bois (tonnes en mètres cubes).

Bagasse – Le résidu cellulosique de l'extraction du sucre de la canne à sucre. Elle est souvent utilisée comme combustible dans l'industrie sucrière.

Charbon de bois – Résidu solide essentiellement constitué de carbone, obtenu par la pyrogénéation du bois en l'absence d'air.

Déchets animaux – Les excréments des bovins, chevaux, porcs, volailles, etc., ainsi que, en principe, les excréments humains, utilisés comme combustible.

Déchets végétaux – Comprennent essentiellement des résidus des récoltes (pailles de blé, de paddy, de maïs, etc.) et des déchets du traitement de produits alimentaires (balle du riz, coques des noix de coco et des arachides, etc.), qui sont utilisés comme combustible. La bagasse n'est pas comprise sous cette rubrique.

Déchets urbains – Correspondent aux produits brûlés directement pour produire de la chaleur et/ou de l'énergie électrique, dont notamment les déchets des secteurs résidentiel et commercial ainsi que du secteur des services publics, qui sont recueillis par les autorités municipales pour leur élimination dans des installations centralisées. Les déchets hospitaliers entrent dans cette catégorie.

DEFINITIONS (continued/ suite)

Industrial waste – Consist of solid and liquid products other than solid biomass and animal products mentioned above (e.g. tires) combusted directly, usually in specialised plants, to produce heat and/or power.

Other waste - Wastes not specifically defined above, such as pulp and paper wastes.

TRANSACTIONS

The data on **production** refer to the first stage of production: accordingly, for hard coal the data refer to mine production; for briquettes to the output of briquetting plants; for crude petroleum and natural gas to production at oil and gas wells; for natural gas liquids to production at wells and processing plants; for refined petroleum products to gross refinery output; for cokes and coke-oven gas to the output of ovens; for other manufactured gas to production at gas works, blast furnaces or refineries; and for electricity to the gross production of generating plants.

The **international trade** of energy commodities is based on the "general trade" system, that is, all goods entering and leaving the national boundary of a country are recorded as imports and exports.

Bunkers refer to fuels supplied to ships and aircraft engaged in international transportation, irrespective of the carrier's flag.

In general, data on **changes in stocks** refer to the difference between stocks at producers, importers and/or industrial consumers at the beginning and at the end of each year. In some cases, however, stock series have been derived on the basis of the difference between gross availabilities for transformation or consumption and official or published data on actual consumption. A positive stock change (+) reflects additions to stocks which in effect decreases "apparent consumption"; while a negative stock change (-) creates exactly the opposite result.

Déchets industriels – Correspondent aux produits liquides et solides autres que la biomasse solide et les produits d'origine animale susmentionnés (pneus par exemple) brûlés directement, généralement dans des installations spécialisées, pour produire de la chaleur et/ou de l'énergie électrique.

Autres déchets - Tous les autres déchets qui n'ont pas été expressément définis ci-dessus, tels que vieux papiers et rebuts de pâte à papier.

TRANSACTIONS

Les données sur **la production** se rapportent au premier stade de production; il s'agit donc: pour la houille, des quantités extraites des mines; pour les agglomérés, de la production des usines d'agglomération; pour le pétrole brut et le gaz naturel, de la production des puits de pétrole et de gaz; pour les liquides de gaz naturel, de la production des puits et des usines de traitement; pour les produits pétroliers raffinés, de la production brute des raffineries; pour le coke et le gaz de cokerie, de la production des fours; pour les autres gaz manufacturés, de la quantité produite par les usines à gaz, les hauts fourneaux ou les raffineries; et pour l'électricité, de la production brute des centrales génératrices.

Le **commerce international** des produits énergétiques est fondé sur le système du "commerce général", c'est-à-dire que tous les biens entrant sur le territoire national d'un pays ou en sortant sont respectivement enregistrés comme importations et exportations.

Les **soutages** se rapportent aux carburants fournis aux navires et aux avions assurant des transports internationaux, quel que soit leur pavillon.

En général, les **variations de stocks** se rapportent aux différences entre les stocks des producteurs, des importateurs ou des consommateurs industriels au début et à la fin de chaque année. Dans quelques cas cependant, les séries relatives aux stocks ont été calculées d'après la différence entre les disponibilités brutes pour transformation ou consommation et les chiffres officiels ou publiés de la consommation réelle. Une variation positive des stocks (+) correspond à une augmentation de stock qui diminue en fait la "consommation apparente"; alors qu'une variation négative des stocks (-) a un effet exactement opposé.

DEFINITIONS (continued/ suite)

Data on **consumption** refer to "apparent consumption" and are derived from the formula "production + imports - exports - bunkers - stock changes." Accordingly, the series on apparent consumption may occasionally represent only an indication of the magnitude of actual (i.e., "measured") consumption. This statement is particularly suitable either when stock data are unavailable or unreliable, or when apparent consumption is a small residual element derived from calculations between large aggregate series and thus is sensitive to small variations in these series. This latter point is also appropriate with respect to the *per capita* consumption calculations presented in some tables. Where the quantities involved are small, the series tend to exaggerate the effects of such elements as stock additions or withdrawals.

Les données sur la **consommation** se rapportent à la "consommation apparente" et sont obtenues par la formule "production + importations - exportations - soutage - variations des stocks". En conséquence, les séries relatives à la consommation apparente peuvent occasionnellement ne donner qu'une indication de l'ordre de grandeur de la consommation réelle (c.à.d. mesuré). Il en est ainsi en particulier soit lorsque les données sur les stocks n'existent pas ou sont de valeur douteuse, soit quand la consommation apparente est le reste, relativement peu important, de calculs effectués sur des séries agrégées d'un ordre de grandeur élevé, et est de ce fait sensible à de petites variations de ces séries. Cette dernière considération vaut aussi pour les calculs de consommation par habitant présentés dans certains tableaux. Lorsque les quantités en cause sont petites, les séries tendent à exagérer les effets d'éléments comme les augmentations ou diminutions de stocks.

ENERGY RESOURCES AND RESERVES¹

Hard Coal, Lignite and Peat

Proved amount in place is the resource remaining in known deposits that has been carefully measured and assessed as exploitable under present and expected local economic conditions with existing available technology.

Proved recoverable reserves are the tonnage within the proved amount in place that can be recovered in the future under present and expected local economic conditions with existing available technology.

Estimated additional amount in place is the indicated and inferred tonnage additional to the proved amount in place that is of foreseeable economic interest. It includes estimates of amounts which could exist in unexplored extensions of known deposits or in undiscovered deposits in known coal-bearing areas, as well as amounts inferred through knowledge of favourable geological conditions. Speculative amounts are not included.

¹Survey of Energy Resources. World Energy Council (WEC)

RESSOURCES ET RESERVES ENERGETIQUES¹

Houille, Lignite et Tourbe

Les quantités avérées en place représentent la ressource restant dans les gisements connus qui a été soigneusement mesurée et évaluée comme exploitable dans les conditions économiques locales présentes et prévues avec une technologie réellement disponible.

Les réserves récupérables avérées représentent le tonnage des quantités avérées en place qui peuvent être récupérées à l'avenir dans les conditions économiques locales présentes et prévues avec une technologie réellement disponible.

Les quantités additionnelles estimées en place représentent le tonnage indiqué et inféré qui est d'intérêt économique prévisible, *en sus* des quantités avérées en place. Cela comprend une estimation des quantités qui pourraient exister dans les extensions inexplorées des dépôts connus ou dans les dépôts non découverts dans les régions houillères, ainsi que les quantités inférées par la connaissance des conditions géologiques favorables. Les montants spéculatifs ne sont pas inclus.

¹Survey of Energy Resources. World Energy Council (WEC)

DEFINITIONS (continued/ suite)

Crude Oil and Natural Gas Liquids

Proved recoverable reserves are the quantity within the *proved amount in place* that can be recovered in the future under present and expected local economic conditions with existing available technology. *Proved amount in place* is the resource remaining in known natural reservoirs that has been carefully measured and assessed as exploitable under present and expected local economic conditions with existing available technology.

The ratio of crude oil reserves to production (R/P ratio) is used to show the length of time those reserves would last in years if production continued at the then current level and there were no further increases in the proved recoverable reserves. The ratio is calculated by dividing the proved recoverable crude oil reserves (which for the most part refer to reserves at the end of 1995) by the production. *These R/P ratios should be viewed with extreme caution.* The definition used for proved recoverable reserves is very restrictive and confined to those known reserves which can be recovered with reasonable certainty under existing economic conditions. The R/P ratios, therefore, can frequently give a very pessimistic impression of the expected life of a country's reserves. In addition, for some of those countries whose R/P ratios appear very large, it can reasonably be assumed that the figures for proved recoverable reserves include some unproved reserves.

Oil Shale and Bituminous Sands

Proved recoverable reserves are the amount, expressed as tonnage of recoverable synthetic oil that has been both carefully measured and has also been assessed as exploitable under present and expected local economic conditions with existing available technology.

Natural Gas

Proved recoverable reserves are the volume within the proved amount in place that can be recovered in the future under present and expected local economic conditions with existing available technology.

Pétrole brut et liquides de gaz naturel

Les réserves récupérables avérées représentent les tonnages des *quantités avérées en place*, récupérables dans l'avenir (par extraction du sol à l'état brut), dans les conditions économiques actuelles, prévues et futures et avec les moyens technologiques disponibles. Les *quantités avérées en place* représentent la ressource restant dans les réservoirs naturels connus qui a été soigneusement mesuré et évalué comme exploitables dans les conditions économiques locales actuelles et attendues avec les technologies existantes disponibles.

Le rapport entre réserves brutes de pétrole et production de pétrole (rapport R/P) est utilisé comme indicateur du nombre d'années que pourraient durer les réserves si la production continuait au rythme actuel et les réserves prouvées récupérables n'augmentent plus. Ce rapport est calculé en divisant les réserves avérées de pétrole (qui se rapportent en général aux réserves à la fin de 1995) par la production. *Il faut toutefois utiliser cet indicateur avec les plus grandes précautions.* La définition utilisée pour les réserves prouvées récupérables est confinée aux réserves connues qui peuvent être récupérées avec une certitude raisonnable dans les conditions économiques actuelles. Le R/P rapport, cependant, peut souvent donner une impression très pessimiste de l'espérance de vie des réserves d'un pays. En plus, pour certains des pays dont le rapport R/P paraît très prononcé, il peut être raisonnable d'admettre que les données concernant les réserves prouvées récupérables comprennent des réserves non prouvées.

Schistes et sables bitumineux

Les réserves récupérables avérées représentent les quantités, en tonnage, de pétrole de synthèse récupérable, minutieusement mesurées et jugées exploitables dans les conditions économiques actuelles et prévues et avec les moyens technologiques disponibles.

Gaz naturel

Les réserves récupérables avérées: volume des quantités avérées en place récupérable à l'avenir dans les conditions économiques et avec les moyens technologiques disponibles.

DEFINITIONS (continued/ suite)

Uranium

Reasonably assured resources refer to recoverable uranium that occurs in known mineral deposits of delineated size, grade and configuration such that the quantities which could be recovered within the given production cost ranges with currently proven mining and processing technology can be specified. Estimates of tonnage and grade are based on specific sample data and measurements of the deposits and on knowledge of deposit characteristics.

Inferred Resources refer to recoverable uranium (in addition to reasonably assured resources) that is inferred to occur, based on direct geological evidence, in extensions of well-explored deposits and in deposits in which geological continuity has been established, but where specific data and measurements of the deposits and knowledge of their characteristics are considered to be inadequate to classify the resource as reasonably assured resources.

Hydropower

Gross theoretical capability is the annual energy potentially available in the country if all natural flows were turbinéd down to sea level or to the water level of the border of the country (if the water course extends into another country) with 100% efficiency from the machinery and driving water-works. Unless otherwise stated, the figures have been estimated on the basis of atmospheric precipitation and water run off.

Uranium

Les ressources raisonnablement assurées se rapportent à l'uranium récupérable qui se trouve dans des dépôts minéraux connus dont la taille, la qualité et la configuration sont telles qu'il pourrait être récupéré, à un coût de production dans les gammes données, avec une technologie d'extraction et de traitement ayant actuellement fait ses preuves. Les estimations de tonnage et de qualité se basent sur des prélèvements d'échantillons spécifiques, sur des mesures des dépôts et sur la connaissance de leurs caractéristiques.

Ressources inférées se rapportent à l'uranium récupérable (en plus des ressources raisonnablement assurées) qui est déduit de se produire, fondée sur des preuves géologiques directes, dans le prolongement de gisements bien étudiés et des dépôts dans lesquels la continuité géologique a été établie, mais où les données spécifiques et des mesures des dépôts et la connaissance de leurs caractéristiques sont considérées comme insuffisantes pour classer les ressources comme ressources raisonnablement assuré.

Energie hydraulique

Capacité brute théorique: énergie annuelle potentiellement disponible dans un pays si tous les cours naturels sont refoulés au niveau de la mer ou au niveau des eaux à la frontière (en cas d'acheminement à l'étranger), selon un rendement de 100% de l'installation et du système d'entraînement. Sauf indication contraire, les chiffres sont déterminés d'après la précipitation atmosphérique et le ruissellement.

UNITS OF MEASUREMENT AND CONVERSIONS - UNITES DE MESURE ET CONVERSIONS

Metric units of measurement are used throughout the *Yearbook*. **Conversion Factor Tables I** through V provide the necessary factors for converting energy data from one measurement system (mass or weight, volume or heat) to another. Unless otherwise stated in the Table Notes, in the case of solid fuels, liquid fuels and gases, the conversions are based on the net calorific value.

The comparison between different fuels is presented in metric tons of coal equivalent (Tables 1 and 5), oil equivalent (Table 2), and terajoules (Tables 3 and 4) on the basis of the heat energy which may be obtained from each of them. In the case of solids fuels, liquid fuels and gases, this is represented by the heat energy obtained by burning an average grade of the fuel in a bomb calorimeter under ideal conditions.

A unit of primary electricity may be equated theoretically with the amount of coal or oil required to produce an equivalent unit of thermal electricity. In the case of hydro-electricity, the ideal condition (assuming 100% efficiency), is taken to be 3.6 TJ per million kWh which corresponds to 0.123 tons of coal equivalent or 0.086 tons of oil equivalent per 1,000 kWh. In the case of nuclear and geothermal electricity, the average condition is assumed (33 and 10% efficiency respectively) and is taken to be 10.909 and 36 TJ per million kWh which corresponds to 0.372 and 1.228 tons of coal equivalent or 0.261 and 0.860 tons of oil equivalent per 1,000 kWh.

The procedure to convert from original units to common units and from one common unit to another is as follows:

³ The base used for coal equivalency comprises 7,000 calories per gram.

⁴ One TCE is defined as 7×10^6 kcal or 0.0293076 TJ.

⁵ One TOE is defined as 10.0×10^6 kcal or 0.041868 TJ (1 calorie = 4.1868 joules).

Les unités métriques de mesure sont utilisées dans le présent *Annuaire*. **Les tableaux des facteurs de conversion I** à V fournissent les coefficients nécessaires pour convertir les données relatives à l'énergie d'un système de mesures (masse ou poids, volume ou contenu calorifique) à un autre. Sauf indication contraire dans les Notes relatives aux tableaux, dans le cas des combustibles solides, liquides et gazeux, on utilise pour les conversions la valeur calorifique nette.

La comparaison entre les divers combustibles est présentée en tonnes métriques d'équivalent charbon (Tableaux 1 et 5), d'équivalent pétrole (Table 2), et térajoules (Tableaux 3 et 4) sur la base de l'énergie calorifique que l'on peut obtenir de chacun d'eux. Dans le cas des combustibles solides, liquides et des gaz cela correspond à l'énergie calorifique obtenue en brûlant une qualité moyenne de chacun de ces combustibles dans une bombe calorimétrique dans des conditions idéales.

Une unité d'électricité primaire peut théoriquement équivaloir à la quantité de charbon ou de pétrole nécessaire pour produire une quantité équivalente d'électricité thermique. Dans le cas de l'électricité d'origine hydraulique, le rendement idéal (l'hypothèse d'un rendement de 100%) est défini comme égal à 3,6 TJ par million de kWh, ce qui correspond à un équivalent charbon de 0,123 tonne métrique ou un équivalent pétrole de 0,086 tonne métrique pour 1 000 kWh. Pour l'électricité d'origine nucléaire et géothermique, on assume le rendement moyen, (l'hypothèse d'un rendement de 33 et 10% respectivement) qui est défini comme égal à 10,909 et 36 TJ par million de kWh, ce qui correspond à un équivalent charbon de 0,372 et 1,228 tonne métrique ou un équivalent pétrole de 0,261 et 0,860 tonne métrique pour 1 000 kWh.

La méthode de conversion suivie pour passer des unités de mesure d'origine aux unités de mesure communes et d'une unité commune à une autre est la suivante:

³ La base utilisée pour l'équivalence charbon correspond à 7 000 calories par gramme.

⁴ Une TEC équivaut par définition à 7×10^6 kcal ou 0,0293076 TJ.

⁵ Une TEP équivaut par définition à $10,0 \times 10^6$ kcal ou 0,041868 TJ (1 calorie = 4,1868 joules).

GENERAL NOTES - NOTES GENERALES

Consumption

Consumption throughout the *Yearbook* is defined as: production + imports - exports - bunkers - stock changes.

Negative Consumption

Consumption for some of the petroleum products is negative due to the exclusion of inter-product transfers from the calculations.

Negative consumption of electricity is due to negligible primary electricity production as compared to net exports.

Time Period

The period to which the data refer is the calendar year, with the exception of the data of the following countries which refer to the fiscal year:

Afghanistan and Iran (Islamic Rep. of) - beginning 21 March of the year stated;

Australia, Bangladesh, Bhutan, Egypt (for the latter two, electricity only), Nepal - ending June of the year stated;

Pakistan - starting July of the year stated

India, Myanmar and New Zealand - beginning April of the year stated.

Trade data

Figures displayed for international trade by partner country in Tables 7, 15 and 29 are based on data from the International Energy Agency (when between OECD-member countries) and from the United Nations Statistics Division COMTRADE (Commodity Trade Statistics). For this reason, the totals (either export to the world or import from the world) may differ from the figures given in other tables.

Increased coverage

The Northern Mariana Islands and the Federated States of Micronesia are included in the Energy Statistics Yearbook for the 2010 edition.

Consommation

Dans l'*Annuaire*, la consommation est définie comme suit: production + importations - exportations - soutages - variations de stocks.

Consommation négative

La consommation de quelques produits pétroliers est négative du fait de l'exclusion des transferts inter-produits des calculs.

La consommation d'électricité apparaît comme un nombre négatif quand la production d'électricité primaire est négligeable par rapport aux exportations nettes.

Période couverte

Les données se rapportent à l'année civile, sauf celles des pays suivants qui se rapportent à l'exercice budgétaire:

Afghanistan et Iran (Rép. islamique) - commençant le 21 mars de l'année indiquée;

L'Australie, le Bangladesh, le Bhutan, l'Égypte (pour ces derniers deux pays, l'électricité seulement), le Népal, le Pakistan - finissant en juin de l'année indiquée;

Pakistan - à partir de Juillet de l'année indiquée

L'Inde, le Myanmar et la Nouvelle-Zélande commençant en avril de l'année indiquée.

Données commerciales

Les figures montrées pour le commerce international par le pays d'associé dans les tableaux 7, 15 et 29 sont basés sur des données provenant de l'Agence internationale de l'énergie (quand entre les pays d'OCDE-pays membres) et de la Division de statistiques des Nations Unies – COMTRADE (statistiques commerciales des produits). Pour cette raison, les totaux (exportation vers le monde ou importation du monde) peuvent différer des figures indiquées dans d'autres tables.

Couverture accrue

Les Îles Mariannes du Nord et les États fédérés de Micronésie sont inclus dans l'édition 2010 de l'*Annuaire des statistiques de l'énergie*

| Nuclear electricity (in 1,000 kWh) | 0.123 | Electricité nucléaire (en 1 000 kWh) |
| Geothermal electricity (in 1,000 kWh) | 0.123 | Electricité géothermique (en 1 000 kWh) |

¹The average calorific value of gas is measured in kcal/m³ (st), i.e., in kcal per cubic metre of gas under standard conditions of 15°C, 1,013.25 mbar, dry.

¹La valeur calorifique moyenne du gaz est mesurée en kcal/m³ (n); c'est-à-dire en kcal par mètre cube de gaz dans les conditions normales 15°C, 1.013,25 mbar sèc.

TABLES

TABLEAUX

Table 1

Production, trade and consumption of commercial energy
Production, commerce et consommation d'énergie commerciale

Thousand metric tons of coal equivalent and kilograms per capita
Milliers de tonnes métriques d'équivalent houille et kilogrammes par habitant

Table Notes:

For tables 1 to 4

Data on individual energy commodities are aggregated and presented in these tables.

Production

Included in the production of commercial primary energy for **Solids** are hard coal, lignite, peat and oil shale; **Liquids** are comprised of crude petroleum, natural gas liquids, biodiesel and alcohol; **Gas** comprises natural gas and primary steam/heat; and **Electricity** is comprised of primary electricity generation from hydro, nuclear, geothermal, wind, tide, wave and solar sources.

Stocks, International Trade and Bunkers

Changes in stocks, imports and exports refer to all primary and secondary forms of commercial energy (including condensate and feedstocks); **Aviation bunkers** refer to bunkers of aviation gasoline and jet fuel; **Marine bunkers** refer to bunkers of hard coal, gas-diesel oil and residual fuel oil.

Consumption

Included in the consumption of commercial energy for **Solids** are consumption of primary forms of solid fuels, net imports and changes in stocks of secondary fuels; **Liquids** are comprised of consumption of energy petroleum products including feedstocks, natural gasoline, condensate, refinery gas and input of crude petroleum to thermal power plants; **Gases** include the consumption of natural gas, input of heat to thermal power plants, net imports and changes in stocks of gasworks and coke-oven gas; and **Electricity** is comprised of production of primary electricity and net imports of electricity.

Notes relatives aux tableaux:

Pour les tableaux 1 à 4

On trouvera dans ces tableaux les agrégats des données relatifs aux différents produits énergétiques.

Production

Sont compris dans la production d'énergie primaire commerciale: pour **les solides**, la houille, le lignite, la tourbe et le schiste bitumineux; pour **les liquides**, le pétrole brut, les liquides de gaz naturel, l'alcool et le biodiesel; pour **les gaz**, le gaz naturel et la vapeur/chaleur primaire; pour **l'électricité**, l'électricité primaire de source hydraulique, nucléaire, géothermique, éolienne, marémotrice, solaire et des vagues.

Stocks, commerce international et soutages

Les variations de stocks, importations et exportations se réfèrent à toutes les formes primaires et secondaires d'énergie commerciale (y compris le condensat et les charges d'alimentation des usines de traitement). **Les soutes avions** se rapportent aux soutages d'essence aviation et de carburéacteur. **Les soutes maritimes** se rapportent aux soutages de houille, de gazole ou carburant Diesel et de mazout résiduel.

Consommation

Sont compris dans la consommation d'énergie commerciale: pour **les solides**, la consommation de combustibles solides primaires, les importations nettes et les variations de stocks de combustibles solides secondaires; pour **les liquides**, la consommation de produits pétroliers énergétiques y compris les charges d'alimentation des usines de traitement, l'essence naturelle, le condensat et le gaz de raffinerie ainsi que le pétrole brut consommé dans les centrales thermiques pour la production d'électricité; pour **les gaz**, la consommation de gaz naturel, les importations nettes et les variations de stocks de gaz d'usines à gaz et de gaz de cokerie ainsi que la vapeur/chaleur primaire consommée dans les centrales thermiques pour la production d'électricité; pour **l'électricité**, la production d'électricité primaire et les importations nettes d'électricité.

Unallocated

An **unallocated column** has been created in tables 1-3 in order to balance out the difference between the total consumption column and the result of the formula production - imports + exports - bunkers + changes in stocks. This inequality occurs primarily because of the exclusion of non-energy petroleum products as well as inadequate or unavailable stock data.

Changes in Methodology

Beginning with the forty-eighth edition of this publication, the following products were added: steam/heat, alcohol and biodiesel.

Please refer to the Definitions Section on pages xv to xxix for the appropriate product description/ classification.

Quantités non réparties

La colonne **quantités non réparties** introduite dans les tableaux 1 à 3 a pour objet de compenser la différence entre les résultats de la formule ci-dessus pour la consommation et les chiffres de la colonne consommation totale entre la consommation totale de colonne et les résultats de la formule production + importations - exportations - soutages + variations de stocks. Cette inégalité résulte essentiellement de l'exclusion des produits pétroliers non énergétiques et de l'absence ou de l'insuffisance des données concernant les stocks.

Modifications apportées à la méthodologie

A partir de la quarante-huitième édition de cette publication, les produits suivants ont été ajoutés : vapeur/chaaleur, alcool et biodiesel.

Veuillez consulter la section "définitions" de la page xv à la page xxix pour une description/classification appropriée des produits.

Production, trade and consumption of commercial energy Production, commerce et consommation d'énergie commerciale

Thousand metric tons of oil equivalent and kilograms per capita
Milliers de tonnes métriques d'équivalent pétrole et kilogrammes par habitant

Table Notes:

Please refer to notes on table 1.

Please refer to the Definitions Section on pages xv to xxix for the appropriate product description/ classification.

Notes relatives aux tableaux:

Veillez consulter les notes de bas de page au tableau 1.

Veillez consulter la section "définitions" de la page xv à la page xxix pour une description/classification appropriée des produits.

**Figure 5: Commercial primary energy production, by region, in 2010
(in million metric tons of oil equivalent)**

**Figure 6: Commercial primary energy consumption, by region, in 2010
(in million metric tons of oil equivalent)**

Production, trade and consumption of commercial energy
Production, commerce et consommation d'énergie commerciale

Thousand terajoules and gigajoules per capita
 Milliers de térajoules et gigajoules par habitant

Table Notes:

Please refer to notes on table 1.

Please refer to the Definitions Section on pages xv to xxix for the appropriate product description/ classification.

Notes relatives aux tableaux:

Veillez consulter les notes de bas de page au tableau 1.

Veillez consulter la section "définitions" de la page xv à la page xxix pour une description/classification appropriée des produits.

Table 4

**Total energy requirement
Besoins énergétiques totaux**

Thousand terajoules and gigajoules per capita
Milliers de térajoules et gigajoules par habitant

Table Notes:

Total energy requirement is defined as consumption of commercial energy (see Tables 1-3) plus biogas and traditional fuels which include fuelwood, charcoal, bagasse, animal, vegetal and other wastes. Please refer to notes on table 1.

Please refer to the Definitions Section on pages xv to xxix for the appropriate product description/ classification.

Notes relatives aux tableaux:

La demande énergétique totale est définie par la consommation d'énergie commerciale (voir les Tableaux 1 à 3) à laquelle s'ajoute le biogaz et les combustibles traditionnels, y compris le bois de chauffage, le charbon de bois, la bagasse et les déchets animaux, végétaux et autres. Veuillez consulter les notes de bas de page au tableau 1.

Veuillez consulter la section "définitions" de la page xv à la page xxix pour une description/classification appropriée des produits.

Production, trade and consumption of solid fuels Production, commerce et consommation de combustibles solides

Thousand metric tons of coal equivalent and kilograms per capita
Milliers de tonnes métriques d'équivalent houille et kilogrammes par habitant

Table Notes:

Production

Production of coal, lignite, oil shale and peat.

Imports

Import of coal, lignite, peat, coke oven coke, gas coke, brown coal coke, hard coal briquettes, lignite-brown coal briquettes and peat briquettes.

Exports

Export of coal, lignite, peat coke oven coke, gas coke, brown coal coke, hard coal briquettes, lignite-brown coal briquettes and peat briquettes.

Changes in stocks

Changes in stocks of coal, lignite, peat, coke oven coke, gas coke, brown coal coke, hard coal briquettes, lignite-brown coal briquettes and peat briquettes.

Please refer to the Definitions Section on pages xv to xxix for the appropriate product description/ classification.

Notes relatives aux tableaux:

Production

Production de houille, lignite, schiste bitumineux et tourbe.

Importations

Importation de houille, lignite, tourbe, coke de four, coke de gaz, coke de lignite, briquettes de houille, briquettes de lignite et briquettes de tourbe.

Exportations

Exportation de houille, lignite, tourbe, coke de four, coke de gaz, coke de lignite, briquettes de houille, briquettes de lignite et briquettes de tourbe.

Variations de stocks

Variations de stocks de houille, lignite, tourbe, coke de four, coke de gaz, coke de lignite, briquettes de houille, briquettes de lignite et briquettes de tourbe.

Veillez consulter la section "définitions" de la page xv à la page xxix pour une description/classification appropriée des produits.

Table 6

Production, trade and consumption of hard coal
Production, commerce et consommation de houille

Thousand metric tons and kilograms per capita
 Milliers de tonnes métriques et kilogrammes par habitant

Table Notes:

Data for China include lignite.

Please refer to the Definitions Section on pages xv to xxix for the appropriate product description/ classification.

Notes relatives aux tableaux:

Les données pour la Chine comprennent lignite.

Veillez consulter la section "définitions" de la page xv à la page xxix pour une description/classification appropriée des produits.

Table 8

Production, trade and consumption of lignite and sub-bituminous coal
Production, commerce et consommation de lignite et charbon sous-bitumineux

Thousand metric tons and kilograms per capita
 Milliers de tonnes métriques et kilogrammes par habitant

Table Notes:

Production and consumption of lignite, sub-bituminous coal and oil shale. Imports, exports and changes in stocks for sub-bituminous coal and lignite.

Please refer to the Definitions Section on pages xv to xxix for the appropriate product description/ classification.

Notes relatives aux tableaux:

Production et consommation de lignite, charbon sous-bitumineux et schiste bitumineux. Commerce et variations des stocks de charbon sous-bitumineux et lignite.

Veillez consulter la section "définitions" de la page xv à la page xxix pour une description/classification appropriée des produits.

Table 9

Production, trade and consumption of coke
Production, commerce et consommation de coke

Thousand metric tons and kilograms per capita
 Milliers de tonnes métriques et kilogrammes par habitant

Table Notes:

Production, trade, stock change and consumption for coke oven coke, brown coal coke, petroleum coke and gas coke.

Please refer to the Definitions Section on pages xv to xxix for the appropriate product description/ classification.

Notes relatives aux tableaux:

Production, commerce, variations des stocks et consommation de coke de four, coke de lignite, coke de pétrole et coke de gaz.

Veillez consulter la section "définitions" de la page xv à la page xxix pour une description/classification appropriée des produits.

Selected series of statistics on renewables and wastes Séries de statistiques des renouvelables et des déchets

Thousand cubic metres, Thousand metric tons, Gigawatt-hours and Terajoules
Milliers de mètres cubes, Milliers de tonnes métriques, Gigawatt-heures et Téradjoules

Table Notes:

Data on fuelwood and charcoal production were primarily taken from information provided by the Food and Agriculture Organization of the United Nations (FAO).

The conversion of fuelwood (solid volume, .33 tce/m³) is based on an average 20-30% moisture content.

The methodology used for estimating fuel bagasse production is derived from the work done by the Economic Commission for Latin America and the Caribbean (ECLAC). Although several different methodologies have been devised, the one selected assumes a yield of 3.26 tons of fuel bagasse at 50% humidity per ton of cane sugar produced. In most cases, bagasse production data were extracted from the Sugar Yearbook of the International Sugar Organization (London).

Liquids and gases include biodiesel, alcohol, biogas and steam/heat from geothermal sources.

Electricity refers to production from geothermal, hydro, solar, wind and wave sources.

Wastes refer to animal, vegetal, municipal and pulp and paper wastes.

Total primary includes all the commodities listed before but charcoal.

The share of total primary indicates the percentage of primary energy produced coming from renewable energy and energy from wastes.

In various cases data were supplied through questionnaires and/or official publications.

Please refer to the Definitions Section on pages xv to xxix for the appropriate product description/classification.

Notes relatives aux tableaux:

Les données relatives à la production du bois de chauffage et du charbon de bois proviennent premièrement des renseignements de l'Organisation des Nations Unies pour l'alimentation et l'agriculture (FAO).

La conversion du bois de chauffage (volume solide, 0,33 tec/m³) est fondée sur une teneur moyenne en humidité de 20 à 30%.

Les méthodes de calcul de la production de bagasse combustible s'inspirent des travaux effectués par la Commission économique pour l'Amérique latine et les Caraïbes (CEPALC). Des diverses formules élaborées, on a retenu celle qui suppose un rendement de 3,26 tonnes de bagasse combustible (d'une teneur en humidité de 50%) par tonne de sucre de canne produite. Les données relatives à la production de bagasse proviennent pour la plupart du Sugar Yearbook publié par l'Organisation internationale du sucre (Londres).

Les liquides et gaz comprennent le biodiesel, l'alcool, le biogaz et la vapeur/chaaleur de sources géothermiques.

La colonne Electricité fait référence à la production à partir de sources géothermique, hydraulique, solaire, éolienne et marémotrice.

Les déchets peuvent être d'origine animale, végétale, municipale et de la fabrication de papier.

Le total primaire inclut tous les produits énergétiques listés ci-dessus, à l'exception du charbon de bois.

La part du total primaire indique le pourcentage de l'énergie primaire produite provenant de sources renouvelables et de déchets.

Dans certains cas les données proviennent des questionnaires et/ou des publications officiels.

Veuillez consulter la section "définitions" de la page xv à la page xxix pour une description/classification appropriée des produits.

Table 14

**Production, trade and consumption of crude petroleum
Production, commerce et consommation de pétrole brut**

Thousand metric tons; kilograms per capita; reserves production ratio (R/P) in years
Milliers de tonnes métriques; kilogrammes par habitant; le rapport entre réserves et production (R/P) en années

Table Notes:

The reserves to production ratio refers to crude petroleum and natural gas liquids

Data on reserves were taken from the Survey of Energy Resources, World Energy Council.

Please refer to the Definitions Section on pages xv to xxix for the appropriate product description/classification.

Notes relatives aux tableaux:

Le rapport entre réserves et production comprend le pétrole brut et les liquides de gaz naturel.

Les données en réserves proviennent de l'enquête des ressources de l'énergie du Conseil Mondial de l'Énergie.

Veillez consulter la section "définitions" de la page xv à la page xxix pour une description/classification appropriée des produits.

Production, trade and consumption of crude petroleum
Production, commerce et consommation de pétrole brut

Thousand metric tons; kilograms per capita; reserves/production ratio (R/P) in years
 Milliers de tonnes métriques; kilogrammes par habitant; le rapport entre réserves et production (R/P) en années

| Country or area Pays ou zone | Year Année | Production Production | | Imports Importations | Exports Exportations | Changes in stocks Variations des stocks | Consumption Consommation | |

Table 16

Refinery distillation capacity, throughput and output
Capacité de traitement des raffineries, quantités traitées et production totale

Thousand metric tons
 Milliers de tonnes métriques

Table Notes:

Output is equal to the sum of “production from refineries” for aviation gasoline, motor gasoline, jet fuel, kerosene, gas-diesel oils, residual fuel oil, liquefied petroleum gas, feedstocks, naphtha, white spirit, lubricants, bitumen asphalt, petroleum waxes, petroleum coke, other petroleum products and refinery gas.

Throughput is equal to the sum of “conversion in refineries” for crude petroleum, feedstocks, natural gas and natural gas liquids n.e.s.

Please refer to the Definitions Section on pages xv to xxix for the appropriate product description/ classification.

Notes relatives aux tableaux:

Production est égal à la production de raffinerie pour essence d’aviation, essence d’auto, carburateurs, pétrole lampant, carburant diesel, mazout résiduel, gaz de pétrole liquéfiés, produits d’alimentation de raffinerie, naphta, essences spéciales, lubrifiants, gaz de bitumen, cires de pétrole (paraffines), coke de pétrole, autres produits pétroliers et gaz de raffinerie.

Quantités traitées est égal a la somme de « conversion en raffineries » pour pétrole brut, produits d’alimentation de raffinerie, gaz naturel et liquides de gaz naturel n.d.a.

Veuillez consulter la section "définitions" de la page xv à la page xxix pour une description/classification appropriée des produits.

Table 17

**Production, trade and consumption of liquefied petroleum gas
Production, commerce et consommation de gaz de pétrole liquéfiés**

Thousand metric tons and kilograms per capita
Milliers de tonnes métriques et kilogrammes par habitant

Table Notes:

Production from refineries and plants.

Please refer to the Definitions Section on pages xv to xxix for the appropriate product description/ classification.

Notes relatives aux tableaux:

Production à partir des raffineries et des usines.

Veillez consulter la section "définitions" de la page xv à la page xxix pour une description/classification appropriée des produits.

Table 18

**Production, trade and consumption of aviation gasoline
Production, commerce et consommation d'essence aviation**

Thousand metric tons
Milliers de tonnes métriques

Table Notes:

Production from refineries and plants.

Please refer to the Definitions Section on pages xv to xxix for the appropriate product description/ classification.

Notes relatives aux tableaux:

Production à partir des raffineries et des usines.

Veillez consulter la section "définitions" de la page xv à la page xxix pour une description/classification appropriée des produits.

Production, trade and consumption of motor gasoline Production, commerce et consommation d'essence auto

Thousand metric tons and kilograms per capita
Milliers de tonnes métriques et kilogrammes par habitant

Table Notes:

Production from refineries and plants.

Please refer to the Definitions Section on pages xv to xxix for the appropriate product description/ classification.

Notes relatives aux tableaux:

Production à partir des raffineries et des usines.

Veillez consulter la section "définitions" de la page xv à la page xxix pour une description/classification appropriée des produits.

Figure 52: World production of motor gasoline 1994-2010

Figure 53: Major motor gasoline producing countries in 2010

Figure 54: Major motor gasoline consuming countries in 2010

Production, trade and consumption of kerosene Production, commerce et consommation de pétrole lampant

Thousand metric tons and kilograms per capita
Milliers de tonnes métriques et kilogrammes par habitant

Table Notes:

Production from refineries and plants.

Please refer to the Definitions Section on pages xv to xxix for the appropriate product description/ classification.

Notes relatives aux tableaux:

Production à partir des raffineries et des usines.

Veillez consulter la section "définitions" de la page xv à la page xxix pour une description/classification appropriée des produits.

Figure 55: World production of kerosene 1994-2010

Figure 56: Major kerosene producing countries in 2010

Figure 57: Major kerosene consuming countries in 2010

Table 21

Production, trade and consumption of jet fuels
Production, commerce et consommation de carburéacteurs

Thousand metric tons and kilograms per capita
 Milliers de tonnes métriques et kilogrammes par habitant

Table Notes:

Production from refineries and plants.

Please refer to the Definitions Section on pages xv to xxix for the appropriate product description/ classification.

Notes relatives aux tableaux:

Production à partir des raffineries et des usines.

Veillez consulter la section "définitions" de la page xv à la page xxix pour une description/classification appropriée des produits.

Figure 58: World production of jet fuels 1994-2010

Figure 59: Major jet fuel producing countries in 2010

Figure 60: Major jet fuel consuming¹ countries in 2010

¹ Consumption includes bunkers

Production, trade and consumption of jet fuels
Production, commerce et consommation de carburéacteurs

Thousand metric tons and kilograms per capita
 Milliers de tonnes métriques et kilogrammes par habitant

Table 22

Production, trade and consumption of gas-diesel oils
Production, commerce et consommation de gazole/carburant diesel

Thousand metric tons and kilograms per capita
 Milliers de tonnes métriques et kilogrammes par habitant

Table Notes:

Production from refineries and plants.

Please refer to the Definitions Section on pages xv to xxix for the appropriate product description/ classification.

Notes relatives aux tableaux:

Production à partir des raffineries et des usines.

Veillez consulter la section "définitions" de la page xv à la page xxix pour une description/classification appropriée des produits.

Production, trade and consumption of residual fuel oil Production, commerce et consommation de mazout résiduel

Thousand metric tons and kilograms per capita
Milliers de tonnes métriques et kilogrammes par habitant

Table Notes:

Production from refineries and plants.

Please refer to the Definitions Section on pages xv to xxix for the appropriate product description /classification.

Notes relatives aux tableaux:

Production à partir des raffineries et des usines.

Veuillez consulter la section "définitions" de la page xv à la page xxix pour une description/classification appropriée des produits.

Production, trade and consumption of energy petroleum products Production, commerce et consommation de produits pétroliers énergétiques

Thousand metric tons and kilograms per capita
Milliers de tonnes métriques et kilogrammes par habitant

Table Notes:

Production

Production refers to the production from refineries and plants of aviation gasoline, motor gasoline, jet fuels, kerosene, gas diesel oil, residual fuel oil, natural gasoline, condensate, feedstocks, petroleum coke, liquefied petroleum gas and refinery gas.

Imports and Exports

Imports and Exports of the same products listed above except refinery gas.

Bunkers

Bunkers of aviation gasoline, jet fuel, kerosene, gas-diesel oils and residual fuel oil.

Please refer to the Definitions Section on pages xv to xxix for the appropriate product description /classification.

Notes relatives aux tableaux:

Production

Production se reporter aux la production à partir des raffineries et des usines d'essence d'aviation, d'essence d'automobile, de carburéacteurs, de pétrole lampant, de carburant diesel, de mazout résiduel, d'essence naturelle, de condensat d'usine, de produits d'alimentation de raffinerie, de coke de pétrole, de gaz de pétrole liquéfiés et de gaz de raffinerie.

Importations et importations

Importations et importations de les mêmes produits mentionnés dans la production à l'exception des gaz de raffinerie.

Soutages

Soutages de l'essence d'aviation, carburateurs, pétrole lampant, produits d'alimentation de raffinerie et mazout résiduel.

Veillez consulter la section "définitions" de la page xv à la page xxix pour une description/classification appropriée des produits.

Table 25

Production of non-energy products from refineries - by type
Production des raffineries - produits non-énergétiques - par catégorie

Thousand metric tons
 Milliers de tonnes métriques

Table Notes:

Total production

Total production of naphtha, white spirit, lubricants, bitumen asphalt, petroleum waxes, petroleum coke and other petroleum products.

Please refer to the Definitions Section on pages xv to xxix for the appropriate product description /classification.

Notes relatives aux tableaux:

Production totale

Production totale de naphthas, essences spéciales, lubrifiants, asphalte de bitume, cires de pétrole, coke de pétrole, et autres produits pétroliers.

Veuillez consulter la section "définitions" de la page xv à la page xxix pour une description/classification appropriée des produits.

Table 26

**Production of energy products from refineries - by type
Production des raffineries - produits énergétiques - par catégorie**

Thousand metric tons
Milliers de tonnes métriques

Table Notes:

Total production

Total production of aviation gasoline, motor gasoline, jet fuels, kerosene, gas-diesel oils, residual fuel oil, liquefied petroleum gas, refinery gas and feedstocks.

Aruba produces only feedstocks to be further refined abroad.

Please refer to the Definitions Section on pages xv to xxix for the appropriate product description /classification.

Notes relatives aux tableaux:

Production totale

Production totale d'essence aviation, essence auto, carburéacteurs, pétrole lampant, gazole carburant diesel, mazout résiduel, G.P.L., gaz de raffinerie et charges d'alimentation de raffineries.

Aruba produit seulement des matières de base à raffiner encore à l'étranger.

Veuillez consulter la section "définitions" de la page xv à la page xxix pour une description/classification appropriée des produits.

Capacity and production of natural gas liquid plants - by type Capacité et production des usines d'extraction de liquides de gaz naturel - par catégorie

Capacities in million cubic metres and production in thousand metric tons
Capacités en million de mètres cubes et production en milliers de tonnes métriques

Table Notes:

Total production

Total production of aviation gasoline, motor gasoline, natural gasoline, jet fuel, kerosene, gas-diesel oils, residual fuel oil, liquefied petroleum gas, plant condensate, naphtha, white spirit, petroleum coke, lubricants, bitumen asphalt, petroleum waxes, natural gas liquids n.e.s. and other petroleum products.

Other natural gas liquids

Total production excluding natural gasoline, plant condensate and liquefied petroleum gas.

Please refer to the Definitions Section on pages xv to xxix for the appropriate product description /classification.

Notes relatives aux tableaux:

Production totale

Production totale d'essence d'aviation, essence d'auto, essence naturelle, carburateurs, carburant diesel, mazout résiduel, gaz de pétrole liquéfiés, condensats d'usine, naphthas, essences spéciales, coke de pétrole, lubrifiants, asphalte de bitume, cires de pétrole, liquides de gaz naturel n.d.a. et autres produits pétroliers.

Autres produits pétroliers

Production totale non compris l'essence naturelle, les condensats d'usine et les gaz de pétrole liquéfiés.

Veillez consulter la section "définitions" de la page xv à la page xxix pour une description/classification appropriée des produits.

Table 28

Production, trade and consumption of natural gas
Production, commerce et consommation de gaz naturel

Terajoules and megajoules per capita
 Téradjoules et mégajoules par habitant

Table Notes:

Production

Production refers to net production: gross production minus re-injected, minus flared and vented, minus extraction loss shrinkage.

Please refer to the Definitions Section on pages xv to xxix for the appropriate product description /classification.

Notes relatives aux tableaux :

Production

Production en gros moins réinjectées, moins brûlées à la torchère ou éventées, moins perte par extraction et réduction.

Veillez consulter la section "définitions" de la page xv à la page xxix pour une description/classification appropriée des produits.

Table 30

**Production of other gases - by type
Production d'autres gaz - par catégorie**

Terajoules
Térajoules

Table Notes:

Total production

Total production of liquefied petroleum gas production by refinery and plant, refinery gas production from refinery, production of gasworks gas, coke oven gas, blast furnace gas and biogas.

Please refer to the Definitions Section on pages xv to xxix for the appropriate product description /classification.

Notes relatives aux tableaux:

Production totale

Production totale de gaz de pétrole liquéfiés par raffinement, production de gaz raffiné naturellement, production de gaz d'usine à gaz, gaz de cokerie, gaz de haut-fourneau et biogaz.

Veillez consulter la section "définitions" de la page xv à la page xxix pour une description/classification appropriée des produits.

Production, trade and consumption of gases Production, commerce et consommation de gaz

Terajoules and megajoules per capita
Térajoules et mégajoules par habitant

Table Notes

Production

Gross natural gas production minus re-injected minus flared and vented minus extraction loss shrinkage plus gasworks gas plus coke oven gas plus blast furnace gas plus biogas plus liquefied petroleum gas production by refinery and plant plus refinery gas production from refinery.

Imports

Imports of natural gas, gasworks gas and liquefied petroleum gas.

Exports

Exports of natural gas, gasworks gas and liquefied petroleum gas.

Changes in stocks

Changes in stocks of natural gas, gasworks gas, coke oven gas, liquefied petroleum gas and refinery gas.

Please refer to the Definitions Section on pages xv to xxix for the appropriate product description /classification.

Notes relatives aux tableaux:

Production

Production en gros de gaz naturel moins réinjectées moins brûlées à la torchère ou éventées moins perte par extraction et réduction plus gaz d'usine à gaz plus gaz de cokerie plus gaz de haut-fourneau plus biogas plus production de gaz de pétrole liquéfiés par raffinement, production de gaz raffiné naturellement.

Importations

Importation de gaz naturel, gaz d'usine à gaz et gaz de pétrole liquéfiés.

Exportations

Exportation de gaz naturel, gaz d'usine à gaz et gaz de pétrole liquéfiés.

Variations de stocks

Variations de stocks de gaz naturel, gaz d'usine à gaz, gaz de cokerie, gaz de pétrole liquéfiés et gaz de raffinerie.

Veillez consulter la section "définitions" de la page xv à la page xxix pour une description/classification appropriée des produits.

Net installed capacity of electric generating plants - by type Puissance nette installée des centrales électriques - par catégorie

Thousand kilowatts
Milliers de kilowatts

Table Notes:

For this table, Other refers to geothermal, wind, solar, tide and wave net installed capacity, whenever they are available in the country.

For Austria data are given in gross maximum capacity.

Please refer to the Definitions Section on pages xv to xxix for the appropriate product description /classification.

Notes relatives aux tableaux :

Dans ce tableau, "autre" fait référence à la capacités nette installées en énergies géothermique, éolienne, solaire, marémotrice et énergie des vagues quand elles sont disponibles dans le pays.

Pour l'Autriche les données représentent la capacité maximale brute.

Veuillez consulter la section "définitions" de la page xv à la page xxix pour une description/classification appropriée des produits.

Utilization of installed electric generating capacity - by type Utilisation de la capacité des centrales électriques - par catégorie

Kilowatt-hours per kilowatt
Kilowattheures par kilowatt

Table Notes:

Data on utilization are derived by dividing the data on electricity production shown in Table 34 by the net installed capacity shown in Table 32.

For this table, Other refers to geothermal, wind, solar, tide and wave, whenever they are available in the country.

For Austria data are given in gross maximum capacity.

Please refer to the Definitions Section on pages xv to xxix for the appropriate product description /classification.

Notes relatives aux tableaux:

Les données sur l'utilisation sont obtenues en divisant la production (Tableau 34) par la puissance nette installée (Tableau 32).

Dans ce tableau, "autre" fait référence aux énergies géothermique, éolienne, solaire, marémotrice et énergie des vagues quand elles sont disponibles dans le pays.

Pour l'Autriche les données représentent la capacité maximale brute.

Veuillez consulter la section "définitions" de la page xv à la page xxix pour une description/classification appropriée des produits.

Table 34

**Production of electricity - by type
Production d'électricité - par catégorie**

Million kilowatt-hours
Milliers de kilowattheures

Table Notes:

For this table, Other refers to geothermal, wind, solar, tide and wave electricity production, whenever they are available in the country.

For India, thermal production includes also wind electricity.

Please refer to the Definitions Section on pages xv to xxix for the appropriate product description /classification.

Notes relatives aux tableaux:

Dans ce tableau, "autre" fait référence à la production d'électricité géothermique, éolienne, solaire, marémotrice et énergie des vagues quand elles sont disponibles dans le pays.

Pour l'Inde, les données relatives à la production thermique incluent la production d'électricité éolienne.

Veuillez consulter la section "définitions" de la page xv à la page xxix pour une description/classification appropriée des produits.

Production of Heat – by type Production de chaleur – par catégorie

Terajoules
Térajoules

Table Notes:

Heat from geothermal sources includes heat from chemical and from non-specified sources.

Heat from thermal power plants includes heat from nuclear and thermal CHP (combined heat and power) plants.

Please refer to the Definitions Section on pages xv to xxix for the appropriate product description /classification.

Notes relatives aux tableaux:

La chaleur des sources géothermiques inclut la chaleur des sources chimiques ou non-indiquées.

La chaleur des centrales thermiques inclut la chaleur des centrales de cogénération chaleur/électricité nucléaires et thermiques.

Veuillez consulter la section "définitions" de la page xv à la page xxix pour une description/classification appropriée des produits.

Production of Uranium (Uranium content)
Production d'uranium (contenu en uranium)

Metric tons
Tonnes métrique

Table Notes:

Based on country submissions and Table 1.21 of the OECD and IAEA publication *Uranium 2011: Resources, Production and Demand*, OECD Publishing, available at <http://dx.doi.org/10.1787/uranium-2011-en>.

Production for Bulgaria, France, Germany and Hungary comes from mine rehabilitation efforts only.

Please refer to the Definitions Section on pages xv to xxix for the appropriate product description /classification.

Notes relatives aux tableaux:

Basé sur les soumission des pays et les données du tableau 1.21 de l'OCDE et AIEA *Uranium 2011: Ressources, production et demande*, Editions OCDE. <http://dx.doi.org/10.1787/uranium-2011-en>.

La production pour la Bulgarie, la France, l'Allemagne et la Hongrie provient exclusivement des travaux de réaménagement de mines.

Veillez consulter la section "définitions" de la page xv à la page xxix pour une description/classification appropriée des produits.
