

The Dashboard Proposal

A First Approach by Colombia and Guatemala

New York, 17 June 2013

**PROSPERIDAD
PARA TODOS**

The Endpoint

The Post 2015 Development Agenda should be developed as a single overarching process, culminating in an agreement on:

A single agenda with a single set of Goals that will serve to align priorities, efforts and resources to tackle the major development challenges of our times.

Cancillería
Ministerio de Relaciones Exteriores

PROSPERIDAD
PARA TODOS

A Single Agenda Requires *Differentiation*

A single agenda that is **universally** relevant, and delivers on equity requires a method for ***differentiation***:

- We face **global challenges** that need to be addressed at the global level
- Yet we have **regional, national, and local specificities** that need to be taken into account

Cancillería
Ministerio de Relaciones Exteriores

PROSPERIDAD
PARA TODOS

A Single Agenda Requires *Differentiation*

The Agenda needs to provide for

- Global coherence
- Global level issues and challenges
- Minimum standards
- Comparability and aggregation at global levels

Balance between top-down & bottom-up is needed

- Tailored to national priorities and circumstances
- Incorporating the multidimensional challenges of development - including poverty eradication and sustainability

Cancillería
Ministerio de Relaciones Exteriores

**PROSPERIDAD
PARA TODOS**

A Basic Architecture to Deliver on Differentiation

As many have suggested, the best architecture would provide for

- **global goals** that focus on global development priorities
- **targets and indicators tailored** to national priorities and circumstances

PARA TODOS**

Making Differentiation Operational: The Dashboard Concept

⇒ **Global Goals:**

- Agreement on a few salient global priorities

⇒ Each Goal would have a core set of **targets & indicators agreed at international level**

- Each country **would determine the speed and level for each target**
- Each country would determine which targets & indicators are relevant according to their national circumstances

In addition to this,

- Countries can define **additional targets and/or indicators**
- *This would not be uptaken at international level – in the MDG process many countries defined additional national MDGs that served a domestic agenda but were not reflected internationally*

An Example

Food Security & Nutrition

Reduce postharvest loss and food waste
by $x\%$

Reduce harvest waste by $x\%$ by [year]

Reduce handling & storage waste by $x\%$
by [year]

Reduce consumption waste by $x\%$ by
[year]

Each country determines its:

- Baseline
- Milestones
- Speed

Each country determines which indicators are relevant and adjusts them to national circumstances (e.g. type of crop, locality, modalities)

PROSPERIDAD
PARA TODOS

Considerations on Inclusion of Targets....

Member States may consider including:

- Relevant **MDG targets** under each Goal
- **Cross-cutting and/or inter-linked targets** that are relevant to more than one Goal
- **Global minimum standards**

**PROSPERIDAD
PARA TODOS**

The Benefits of the Dashboard Approach

- ⇒ **Issues common** to many countries would be reflected in the **same targets and indicators** = good basis for **cooperation, capacity building, exchange of experiences**, and overall **support** from all sources
- ⇒ Issues related to management of **global commons** (for example migratory fish stocks) would be, cumulatively, more appropriately addressed
- ⇒ **Regional and global comparability and aggregation** would be possible
- ⇒ Overall, the new framework would be **more coherent** between the global, regional, and national levels
- ⇒ The option of adding other national-level goals would ensure that the totality of priority issues for each country would be included

A Race to the Top

⇒ **Why a “race to the bottom” is unlikely:**

⇒ When metrics work and are perceived to be useful, countries and organizations use them.....

.....GDP and MDGs are both voluntary!

⇒ Given the reach & scope of communication technologies and social media, it is unlikely that any country will opt out of the new development framework, or focus on targets that already met.

If we get the new metrics right, this will spur a race to the top – by all stakeholders, not only for governments

PARA TODOS**

A Data Revolution?

- Integrate statistics more fully into decision making
- Enable real-time monitoring of development results
- Draw on existing and new sources of data
- Promote open access to, and use of, data
- Use new technologies and connectivity

The Need for Disaggregated Data

HLP Report - *Leave no one behind*:

“Averages conceal more than they reveal...

Universal access requires sufficient disaggregation of the indicator to allow discrepancies from the average trend to be identified early on...

.... a **target is only** deemed to be **met if all groups** meet the indicated threshold level.”

Cancillería
Ministerio de Relaciones Exteriores

PARA TODOS

The support that is needed

Enhanced **statistical capacity** at national level will demand **significant capacity building prior to 2015 and beyond**

A limited and coherent set of internationally agreed indicators embedded in an internationally agreed and coherent set of goals and targets **can help to focus capacity building support**

Cancillería
Ministerio de Relaciones Exteriores

**PROSPERIDAD
PARA TODOS**

Partnering for Statistics

The policy community should partner from the outset with the international statistical community, starting with the **UN Statistical Commission**

The selection of targets and indicators needs to be founded on sound internationally agreed statistical standards, methods and practices to ensure international comparability across countries and regions.

The Dashboard can be a platform for this collaboration.

....we need to get the SDG framework right!

Cancillería
Ministerio de Relaciones Exteriores

**PROSPERIDAD
PARA TODOS**

What We Get from the Dashboard

- A **universally relevant** agenda that is **sensitive to national** specificities through **differentiation**
- **More robust information for policy development**
- **Coherence at all levels**
- **A basis for aggregation and comparability**
- **A focus for provision of support**

Thank you

Gracias
