BIODIVERSITY AND SPECIES ACCOUNTING

CLAIRE BROWN

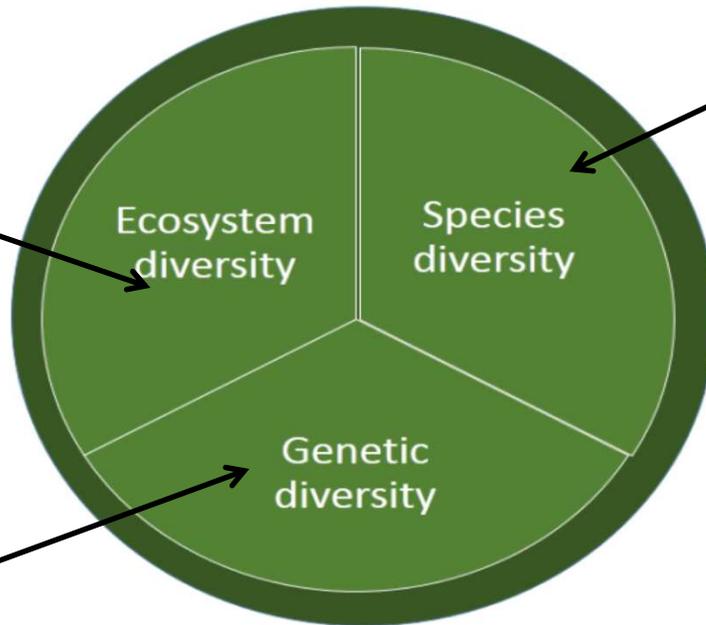

27/06/2016

IMPORTANT PART OF NATURAL CAPITAL STOCK

WHY SPECIES ACCOUNTS

Components of biodiversity

**INFORMATION IN
WIDER ECOSYSTEM
ACCOUNTS**

**IMPORTANT BUT
FOR THE FUTURE!**

**SPECIES PROVIDE A PROXY FOR
BIODIVERSITY AND INDICATOR OF
ECOSYSTEM CONDITION**

**SPECIES PROVIDE MANY BENEFITS
TO HUMAN WELL-BEING**

**SPECIES ARE VITALLY IMPORTANT
FOR ECOSYSTEM FUNCTION**

**SPATIAL PLANNING FOR SPECIES-
LEVEL BIODIVERSITY CAN DIFFER
FROM PLANNING FOR ECOSYSTEMS
AND THEIR SERVICES**

**THERE IS CONSIDERABLE RESEARCH
AND DATA ON SPECIES**

BENEFITS

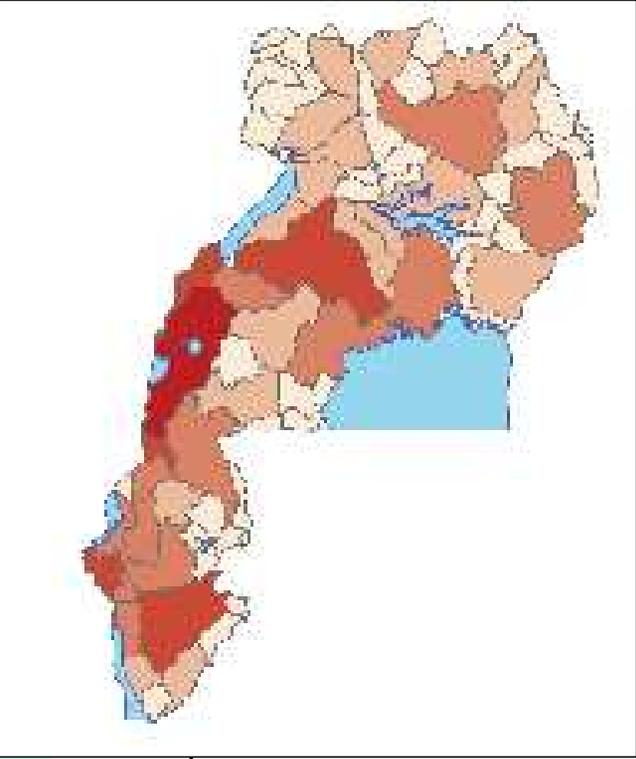

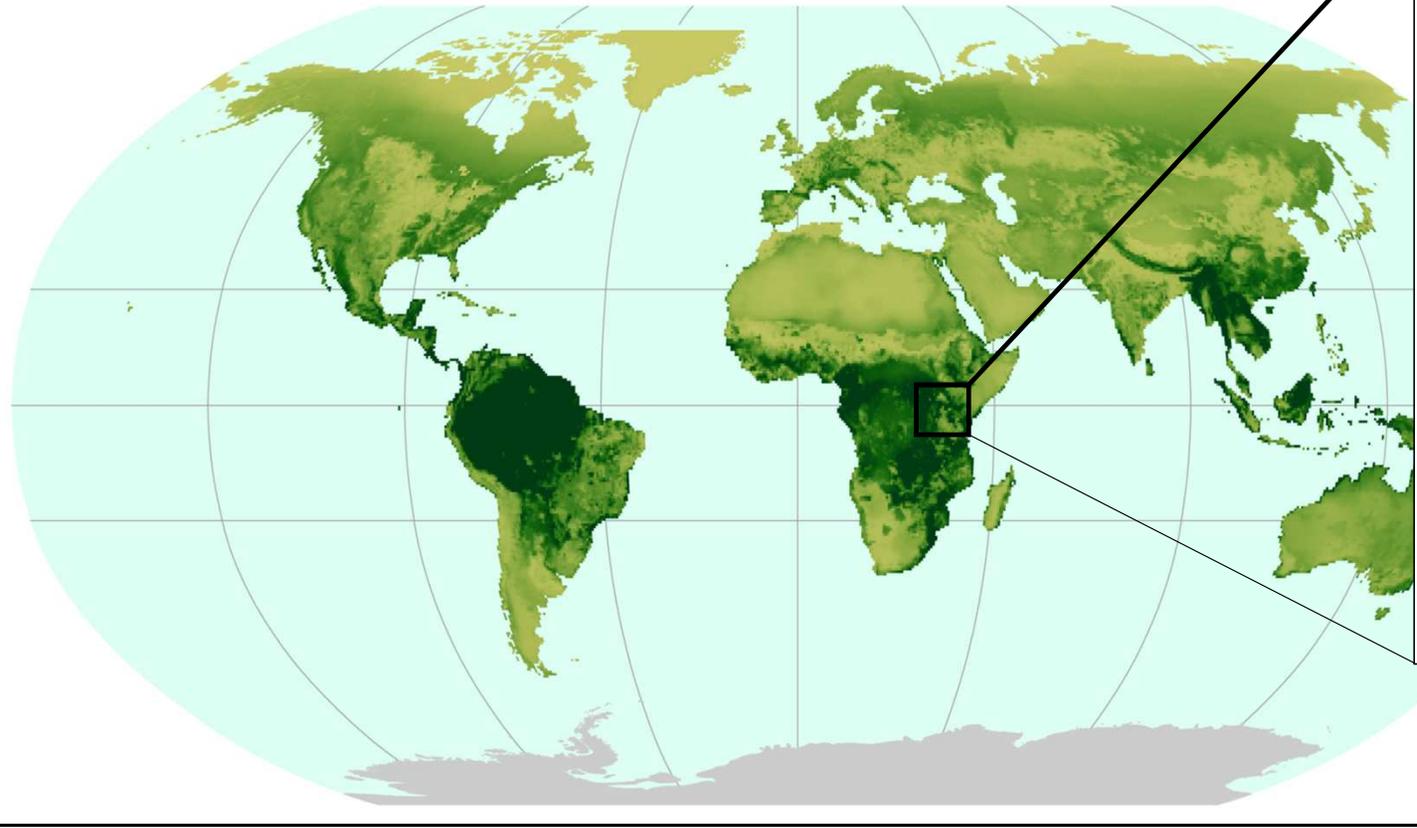

FUNCTIONAL ROLES

DATA ON SPECIES STATUS

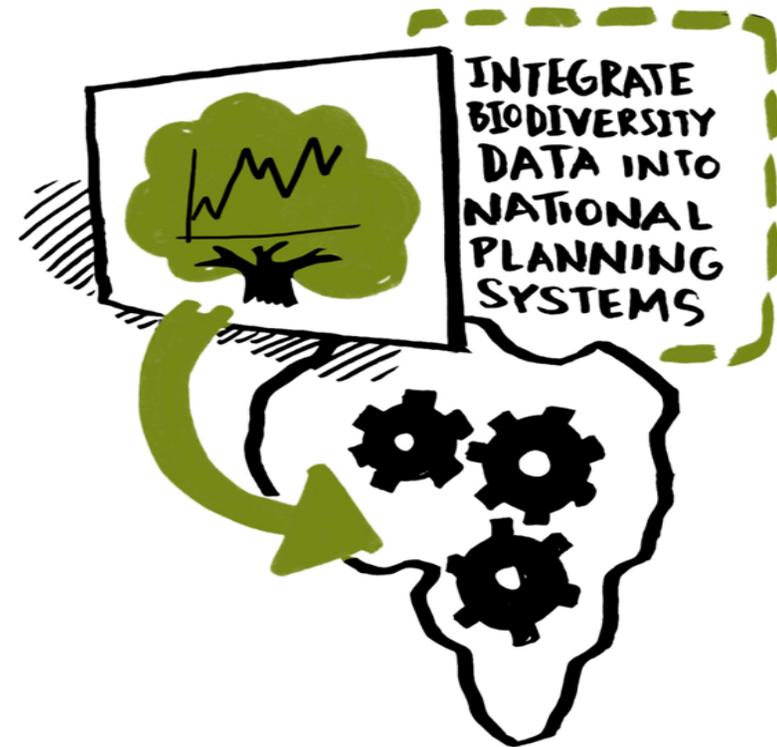

UNEP

WCMC

SPECIES ACCOUNTS CAN HELP INTEGRATE EXISTING SPECIES DATA INTO DECISION MAKING

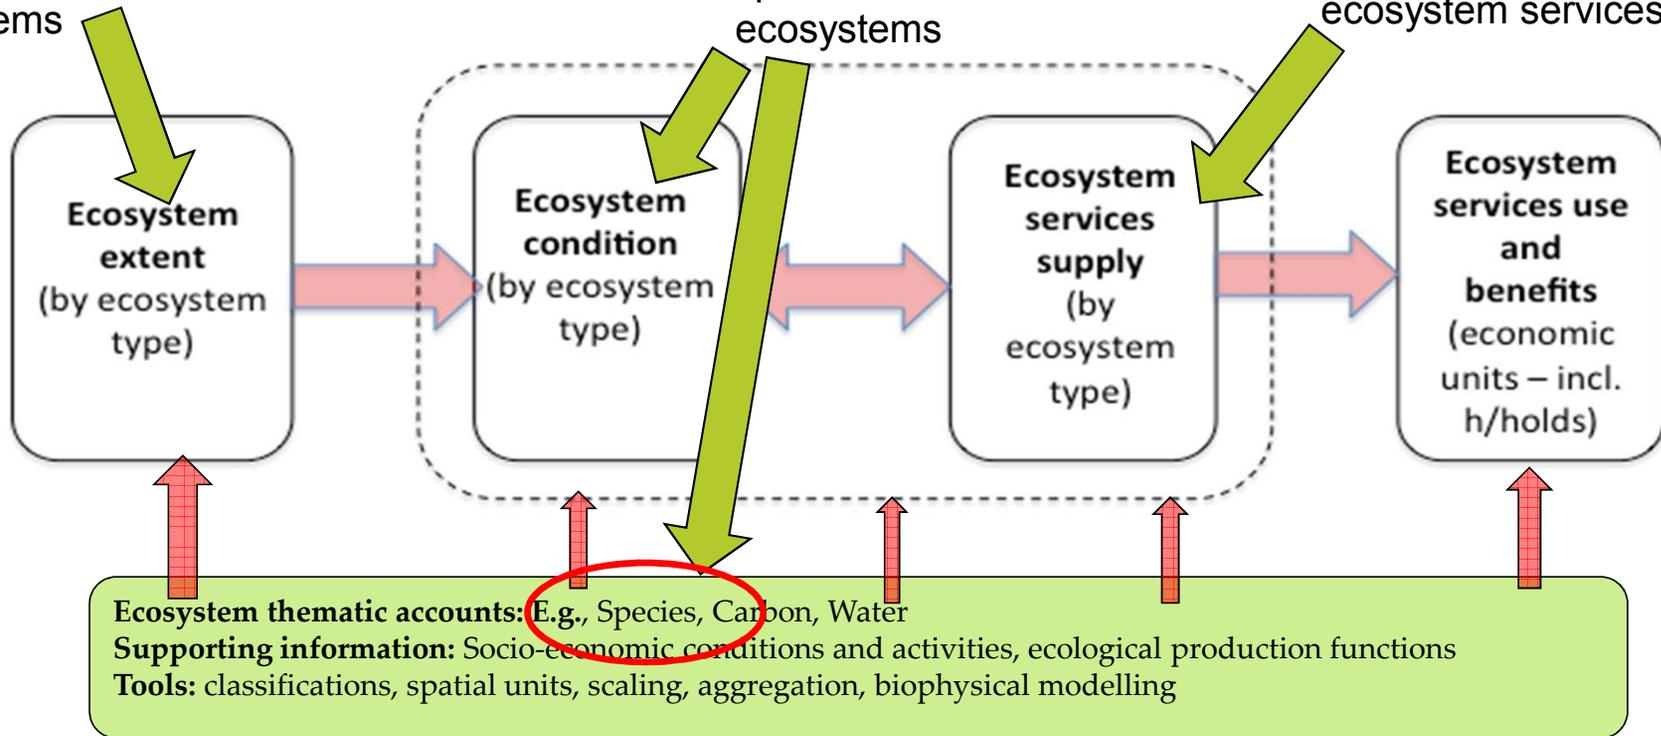

SPECIES ACCOUNTS IN SEEA-EEA.

Areas of ecosystems

Condition of species in ecosystems

Ability to deliver ecosystem services

BIOPHYSICAL SPATIAL ACCOUNTS

- i. **BASED ON SELECTING PRIORITY SPECIES AND SPECIES GROUPS (E.G., MAMMALS)**
- ii. **CONSTRUCT SPATIAL ACCOUNTS USING CHANGES IN DIRECT OR HABITAT BASED OBSERVATIONS**

	Direct Observations	Habitat Based Observations
Methods	Population census (e.g., mammal surveys); Population estimates (e.g., transects, nest counts); Cover (e.g., canopy cover)	Changes in the habitat required by species
Pros	Locally accurate data	Limit resources required
Cons	Depends on significant investments in monitoring	Assumptions add an element of uncertainty. Expertise to implement

Constructing Species Accounts in the context of the SEEA-EEA: Initial approaches for exploration.

Coordinating Lead authors: Steven King, Claire Brown, Mike Harfoot, and Lucy Wilson.

Contributing authors: Katie Bolt (RSPB); Neil Brummitt (Natural History Museum); Stuart Butchart (Birdlife International); Brigitte Emmett (Centre For Ecology and Hydrology); Julian Chow (UNSO); Amanda Driver (SANBI); Mark Eigenraam (IDEA Group); Simon Ferrier (CSIRO); Per Arild Ganåsjordet (Statistisk Sentralbyrå); Hedley Grantham (World Conservation Society); Lars Hein (Wageningen University, NL); Craig Hilton-Taylor (IUCN); Emil Ivanov (University of Nottingham); Daniel Juhn (Conservation International); Georgina Mace (University College London); Ronald Kagwa (Uganda National Planning Authority); Trond Larsen (Conservation International); Francis Ogal (Uganda National Environmental Management Authority); Jan-Erik Petersen (European Environment Agency); and, Caroline Pollock (IUCN).

This work was coordinated by the United Nations Environment Programme World Conservation Monitoring Centre (UNEP-WCMC). The step-by-step approach for constructing Species Accounts was informed by a three-day workshop held at UNEP-WCMC's offices in Cambridge in February 2016. The work has been funded by the Norwegian Ministry of Foreign Affairs and the Swedish International Development Cooperation (SIDA).

Acknowledgements: We gratefully acknowledge the input and support from Alessandra Affari and Ivo Haringa (UNSO), Rocky Harris (DEFRA), Carl Obst (IDEA Group), Stig Gustaf Johansson (the World Bank), Michael Vardoulakis (ANU, World Bank), Kim Joseph Røed (USGS, World Bank), Hilary Wilson and James Vause (UNEP-WCMC), Lisa Wasieleski and Marius Erhard (European Environment Agency), Julie Axlaken (Statistics Norway) and Olav Skarpaas (The Norwegian Institute for Nature Research).

A COHERENT PICTURE

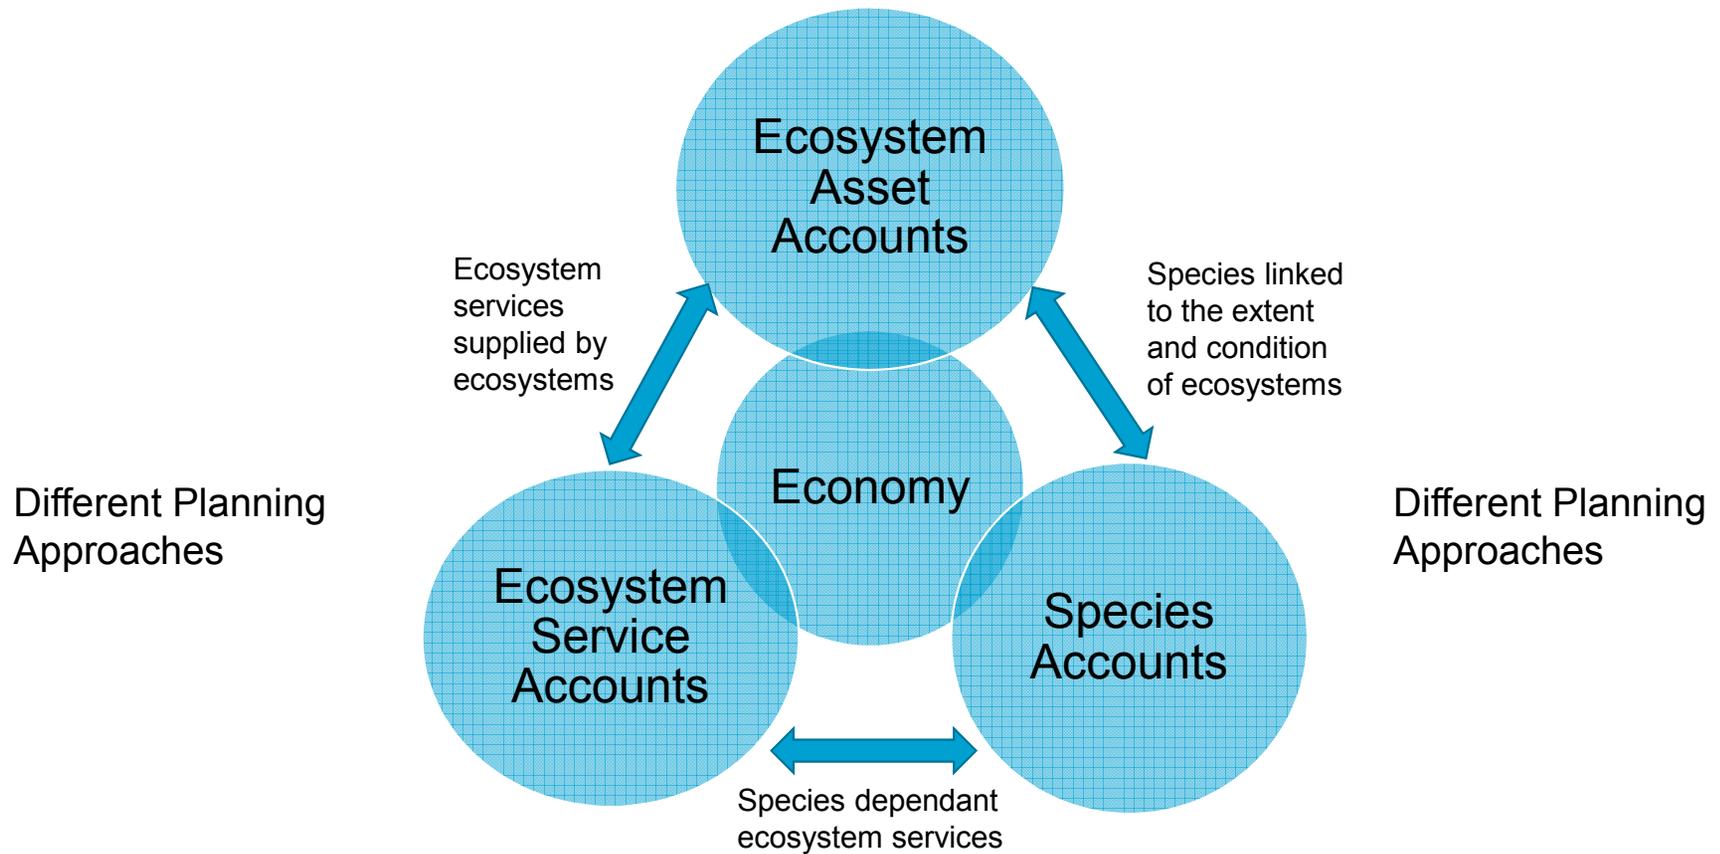

Table A: Example Account of Species and Species Groups of Special Concern (2005 – 2010)

	Species or Species Group 1	Species or Species Group 2	Species or Species Group 3	Species or Species Group 4	Species or Species Group 5	Composite indicator
Example Species	Panda	Cuckoo	Tree sparrow	Orangutan	Vertebrates	
Unit of measurement	No. of individuals	No. of individuals	Relative abundance based on population density	Hectares of suitable habitat	Proportion of original species complement	N/A
Reference (1995)	2,000	100,000	Set to 1.0	1,000,000	85%	100%
Opening (2005)	1,500	60,000	0.70	100,000	80%	N/A
Additions	100	N/A	N/A	10,000	N/A	N/A
Reductions	200	N/A	N/A	30,000	N/A	N/A
Closing (2010)	1,400	65,000	0.50	80,000	70%	N/A
Net Change	-100	+5,000	-0.20	-2,000	-10%	N/A
Opening (% of reference, 2005)	75%	60%	70%	10%	94%	TBC
Closing (% of reference, 2010)	70%	65%	50%	8%	82%	TBC
Net change (% of reference)	-5%	-5%	-20%	-2%	-12%	TBC
Change (% of opening)	-6.7%	+8.3%	-29%	-20%	-13%	TBC

Reference measure for a common year

Abundance measure at start of accounting period

Additions and reductions should be stated if known

Abundance measure at end of accounting period

Net change in abundance over accounting period

Relative Abundance measure at start of accounting period

Relative Abundance measure at end of accounting period

Net change in relative abundance over accounting period

Change as % of the opening relative abundance

POTENTIAL USES

- i. IDENTIFYING IF SPECIES ARE BEING EXPLOITED SUSTAINABLY (E.G., SETTING QUOTAS)**
- ii. IDENTIFYING WHICH ECOSYSTEMS ARE BEING DEGRADED AND THEIR RESILIENCE COMPROMISED**
- iii. IDENTIFYING WHAT IS HAPPENING TO LOCALLY PRODUCED ECOSYSTEM SERVICES**
- iv. IDENTIFYING WHAT IS HAPPENING TO THE SPECIES ASSET BASE AND IMPLICATIONS FOR FUTURE BENEFITS**
- v. COMMUNICATING THE ECONOMIC ARGUMENTS FOR INVESTING IN SPECIES AND ECOSYSTEM SERVICES (E.G., IDENTIFYING RETURNS ON INVESTMENT)**
- vi. SPATIALLY ANALYSING ALTERNATIVE LAND USE SCENARIOS AND OTHER TRADE-OFFS WITH SPECIES STATUS**
- vii. INFORMING POLICY OBJECTIVES (E.G., 'NO NET LOSS' OF BIODIVERSITY AND OFFSET PROGRAMMES)**
- viii. IDENTIFYING IF AGGREGATED TRENDS IN SPECIES ARE A CONCERN AT A NATIONAL AND SUB-NATIONAL LEVELS**
- ix. TRACKING PROGRESS TOWARDS SDG'S AND OTHER COMMITMENTS**

INTEGRATED DECISION MAKING

The drivers of biodiversity / species loss arise throughout the economy

Agriculture

Pollution

Climate Change

Forestry

Biofuel

Infrastructure

Biodiversity Protection / Enhancement Targets

Natural Hazard Protection

Food Security

Climate Adaptation

Water Quality & Supply

Sustainable Development

Human Health

Rural Livelihoods

Maintaining and investing in biodiversity will have benefits far beyond biodiversity and contribute to goals across our economies and societies

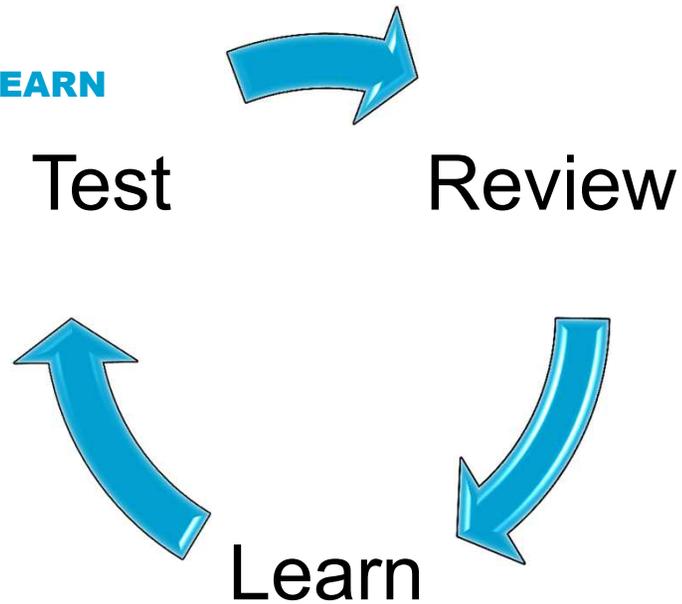

HEALTHY AND PRODUCTIVE ECOSYSTEMS
 Targets: 1.b, 2.1, 2.4, 3.3, 6.3, 6.5, 6.6, 7.2, 11.4, 11.6, 11.a, 12.6, 12.7, 12.8, 13.3, 14.1, 14.2, 14.3, 14.4, 14.5, 14.6, 14.c, 15.1, 15.2, 15.3, 15.4, 15.5, 15.6, 15.7, 15.8, 15.9, 15.a, 17.5, 17.14, 17.19

WHAT NEXT?

- i. **BROADER APPLICATIONS - FOR DECISION MAKERS AND USERS (E.G., PROGRESS TOWARDS SDGS)**
- ii. **PILOTING**
- iii. **TEST - REVIEW - LEARN**

THANK YOU!
